Reed's Nursery at Washington (Yolo county).—We visited the Nursery of C. & W. Reed, at Washington, within a few days, and learned, with much pleasure, of the success of their labors. This nursery has only been under way about two years. The proprietors are working men. We found them at work, and they informed us that they had sold, at very satisfactory rates, all the nursery trees they raised the last year, consisting of about 25,000 Peach, 10,000 Apple, 5,000 Pear, 2,000 Plum, 1500 Cherry, and 500 Quince trees. They have now under bud, in their grounds, about 80,000 fruit trees, 1000 ornamental, and 1000 roses. Messrs. Reed have a fine orchard of standard fruit trees that will give them a good crop, though planted but two years.

Appreciation.

It is seldom that we occupy the columns of our own journal to display the compliments or commendations that are bestowed upon our efforts as journalists, or to make a show of praise, other than that which necessarily comes in our regular correspondence; but there are some occasions when it is fitting and proper to notice those acts that bear upon their face a magnanimity and a just desire to encourage us in the way of well-doing. We are under obligations to the press of our State for many kind words and generous notices, from time to time, during the last four years, and we also recognize, with grateful feelings, the liberality of many cotemporaries in the East, and in Europe, for kind and generous words of encouragement. Such things we shall never forget, for we are conscious we have labored and do labor to advance the general welfare of this State, and while thus laboring we do good to all; for no journal in this State but must acknowledge that if we labor successfully to build up Agriculture, Manufactures, and the Mechanic Arts; if we labor faithfully to promote the general prosperity of the People, we must assuredly help every newspaper in the State that is at all identified with the country; for when the *People are prosperous*, when the *People are rich*, they will all get their share of it, and every newspaper, and every individual or body of men that give us aid, by a kind word, or in any way, will most certainly aid in a true cause, for we labor for the People.

These remarks are called forth at the present moment by the following generous notice of our journal, which we find in the San Francisco Chronicle. We say generous, yet we do feel it to be a just notice, and in these days of party spirit and business rivalry, when selfish feelings so predominate, it is the manifestation of a generous spirit that prompts a man, or men, to do deeds of even-handed justice, free from all selfishness. We hope we may witness many such acts among the journals of our State, each one willing to bestow just meed of praise wherever it is due, irrespective of party, sectarian, or selfish feelings. We shall not forget our cotemporary, for this mark of approbation, but will labor on to merit more and more:

"The California Farmer, published in this city by Warren & Co., is really a most valuable journal, and, in our opinion, is doing great good, not only in promoting the agricultural interests of the country, but in inducing immigration to our shores. We hope it is as well sustained by our farming friends as it deserves to be. One well written statistical article, showing the capability of our soil and the character of our climate, goes far toward inducing the kind of immigration we need. Its last number contains a well written and well reasoned article by Thomas J. Henley, showing that the spring is the proper time to plow for winter crops. From the same number, we learn that there exists a broom factory at Sacramento, which turns out about fifty thousand brooms, annually, of California growth and manufacture, the enterprise of J. A. Wolf. An article on Capt. Randall's steam line from New York to San Francisco, calls to mind the fact that this gentleman is coöperating with others, in this city, to establish a line of steamers adapted to carrying a large number of passengers at a low figure. We shall be glad to publish any information in relation to this enterprise which may be furnished us.

The Honey-bee at Washington.—The rapid increase of the Honey-bee, and the success which has attended its introduction into California must be very gratifying to every friend to California; for we have now an assurance that we shall have the fulfillment of the prophesy, and live in "a land flowing with milk and honey."

While at Sacramento, the past week, we crossed over to the Washington side to view the improvements made, and while there we visited the apiary of J. B. Hoag, Esq., who has ten hives of Bees, in most prosperous condition. These industrials were doing their best to store their little cells "with the sweet food they make." The abundant blossoming of the peach orchards gives them a rich harvest, and we learned that these hives had been supplied, within a few days, with *new upper boxes*, which we saw were nearly full of comb, showing very rapid work.

Our orchardists would find great aids to their fruit crop in the Honey-bees, as these invaluable creatures serve to impregnate the blossoms, and thus set the fruit, and we feel sure that, if our fruit growers would note the result of the operations of the Bees among the blossoms, they would find our hints of value. We say to fruit growers, be sure you have a few hives of Bees, and now is the time to procure them.

We were glad to know that Mr. Hoag had been successful in growing the Bee Balm—a valuable food for Bees.

Mr. Appleton of San José has a fine stock of Bees now ready for sale.

Bernard's Wagon Shop.—Bernard's wagon shop at Sacramento, is one of those industrious bee hives that tend to build up our State. We were much interested in looking at the various specimens of excellent work in his salesrooms: express wagons, light wagons, buggies, and farm wagons, of the very best make and equal if not superior to a great portion of the imported stock that gluts our market. Mr. Bernard has been established on K street for a number of years, employs a number of workmen, all the very best mechanics; and the work from this shop will favorably compare with the famous Concord works, of which so much is said. Mr. Bernard is now enabled to add much to the beauty and finish of his buggies, as he has an improvement in the springing of the top, and also a set-off, by which means a side curtain can be had to great advantage. Mr. B. has also secured the services of a silver plater for his fine work, and is now enabled to complete and finish work that shall nearly surpass that which is offered from the States, and even at a cheaper rate. We invite all to visit this establishment as worthy their notice.

Unsettled Titles.

Go where we will in the country, or visit any city, there is a continual warfare going on in our courts of law, upon this most unhappy matter. It is this great and all important subject that now hangs like an incubus upon our prosperity, and honored be the man or men that shall labor to remove the difficulties in the way of a speedy and equitable settlement of this sad and vexatious theme. We published, some two weeks since, the case of our correspondent "H. E. S." It was a hard one, and we know of thousands of a similar character. We know of millions of dollars now buried, lying useless to the owners, and to our State, belonging to farmers, miners, and others, only waiting for the time when it can be safely invested. The owners prefer real estate; they dare not trust it in ordinary loans, or in banks, or on personal property; they desire to *purchase* for themselves a "homestead;" one on which *no cloud shall rest*; and as yet the chances are few; for Mexican, Spanish, Alcalde, or Limantour, Peter Smith, or Messic, spread their wings like a dark canopy, and the light of that sun of prosperity which would otherwise dawn upon our State comes not.

How much better would it have been for California, had our national government *purchased every claim*, and thrown all open and free; for none can doubt that while there are some grants that are genuine and true, there are hundreds that are based in fraud and wrong.

We go for justice; justice to all. We claim justice for the real owner, and justice for the honest, industrious, and patient settler. God grant they may soon see all their trials end!

The Dioscorea Batatas.

The notice of this very important tuber, from China, which we gave in our last issue, was made hastily as we were going to press, and we omitted to give some facts which were important, and which we now take the opportunity to elucidate.

Major S. J. Hensley, from whom we received our tubers, had made great efforts for a long time to procure from China this article, of the very best variety, and after great labor and cost he succeeded in procuring them, and has now kindly offered to furnish samples to those who will make a good use of them to experiment and make known the results.

Maj. Hensley desires it to be understood that this article *is not for sale by him*, but *a free donation* in small parcels to each person, to introduce into the country. The tubers should be cut lengthwise, then in pieces three inches long, and planted the cut or flat side upwards. Much praise is due Maj. H. for this laudable effort to promote such an enterprise.

Fine Stock.

While on a visit to Folsom, we were gratified to see some fine dairy stock at the yard of D. Wellington, Esq., of the Central House. A fine American cow, whose milking progeny around her numbered sixteen head of stock, being her calves to the third generation, and all in about four years; there were besides some four or five other animals, raised for working stock. We noticed a remarkable Ayreshire calf, a few months old, of a dun color; this animal promises to be a fine blood animal.

These evidences of the increase of fine stock are of moment to our State.

The Gold Comes!—The gold comes to us; and the gold *goes* away. On the down trip of the Antelope, on Wednesday last, something like $250,000 of the precious *ore* was brought down. The proprietors of the famous Allison Mine brought down from $35,000 to $40,000 as the result of *two weeks'* work (pretty rich pay). Another party had about $40,000, and Wells, Fargo & Co. had $133,000. Thus we find the gold stream flows to our city. But where does all this gold *go?* Look to the importation of those articles that could be *made and produced* by our own people, and look to the heavy freight bills paid for them, and the answer is there! When will this evil be remedied?

A New Feature in Photography.—Progress is the watchword, and among all the works of art, and among all professors, none are making greater progress than those who are now engaged in the Daguerreian Art, and among those who are now engaged in this art none are more enthusiastically at work to advance it than Vance & Co., at the principal office of Vance at San Francisco, and Vance & Co. at their new office at Sacramento, recently opened at Andrews' buildings, on J street. Vance & Co.'s new rooms now form one of the chief points of attraction in Sacramento (being after the style of Vance's fine rooms in this city). These artists have opened a splendid suit of *six rooms*, and prepared and furnished them in an appropriate and elegant style. These artists have discovered several new features in the process, and they are now taking magnificent life-like sizes; and as they hang on the walls, they appear like oil paintings of the highest finish.

We examined several photographs and ambrotypes of superior finish, among them we notice Senators Johnson, Bell and Soule; Col. Whiting, Mr. Noonen, and Mr. Stanford of Stanford Brothers, Col. Andrews (the owner of the block) and lady. The photograph of Mrs. A. is of superb style, being finished as an oil painting, and one of the finest pictures yet got out on this coast. The ladies' drawing-room and the show rooms are elegant. Mr. Davis, the gentlemanly proprietor, has done everything to make these rooms the first in the State. Mr. Weed, the working artist, is a devotee to his business, and all who wish to see true artistical work of the highest order, should improve the time to visit this gallery, as one most worthy their notice and patronage.

Received—with Thanks.—The genuine Carolina Sweet Potato, an excellent sample, was sent us the present week, from I. B. Rumford, Esq., who has been successful in raising them the past year; and who will show a product the present year that will be gratifying to all who love a "sweet morsel." We call particular attention to Mr. R.'s letter.

The true Concord Grape, of which we have spoken, and which is worthy extensive cultivation, a fine vine of the same was received from J. C. Bull, Esq., of Union, Humboldt Bay—the brother of E. W. Bull, Esq., the originator—for which he has our thanks.

Thanks to Messrs. S. W. Moore & Co., Seedsmen on California street, for a fine collection of superb Bulbous, sent us last week, consisting of Hyacinths, Jonquils, Narcissus, and those magnificent Japan lilies whose gorgeous beauty is unrivaled among their tribe.

We acknowledge a complimentary ticket to the grand Chess Tournament, which is to be held in this city on the 20th, at the Pioneer Society's Rooms; we rejoice to notice this excellent plan to give a due interest on the Pacific coast to one of the noblest of games. We take pleasure to present in another column the programme of the Committee.

We received the new works of Asa Humphreys, Esq., recently published in Boston by Crooker & Brewster. These valuable books are exciting considerable attention among the literati in the various States, and we would call the attention of teachers of schools to these books. We learn they will be introduced into the schools of Sacramento.

The works referred to, are the English Prosody, with rules deduced from the genius of our language, and the Examples of the Poets; a book of 175 pages, duodecimo. Also, the Rules of Punctuation, deduced from the practice of our classic writers; to which is added the Rules for the use of Capitals; this is a small volume of 75 pages. Both these works are of interest and value. We shall refer to them again.

Steam Wagon.—The famous Overton Steam-wagon at Sacramento, is nearly completed. It is a most substantial piece of mechanical labor and ingenuity; its heavy frame, with the engines on the body, its ponderous wheels, the spear or tongue resembling the head of an anaconda, as it projects forward of the wheels, give to the whole carriage the appearance of some war engine. This wagon is now at the foundery of Bowstead & Woods, on the levee, at that city, who have done the work in a most creditable manner. We learn that the finishing work will soon be applied, so that a public trial can be had of this great invention. Should it prove as successful as the owner anticipates, we trust our Legislature will bestow a generous bounty upon the persevering inventor.

Settling the Titles.

THE "Van Ness Ordinance," which has now become a law by receiving the signature of the Governor, has excited the community, in and around San Francisco, to a great degree. Large public meetings were held by the different parties, *pro* and *con*, at Musical Hall. We hear the talk of great wrongs, of bribery, swindling, fraud, oppression, loss, and ruin to the city on the one hand, and all manner of evil to accrue on the other side. The great parties met together and had a war, of words, parted in peace, and as we go to press we hear the roar of cannon proclaiming victory and rejoicing for the triumph of the people. For ourselves, we are in doubt who wins. We think both parties will, for the vexed question is settled, and the country is safe. We rejoice, certainly, for one thing, and shout, fire away! make the cannon roar! for there is cause of rejoicing, for the GLORIOUS RAIN that is now coming down from Heaven to bless the earth with an abundant harvest. This *settles the title* to a larger tract of land than all San Francisco, for it *settles the title* to a good crop of several millions of acres of grain and other crops that shall make glad the hearts of thousands of families.

The State Prison.

THE prompt and decisive action of Governor Weller, in carrying out the wishes of the Legislature, has received the universal approbation of all parties. The course of the Governor, under many trying circumstances, proves that he intends to carry out the doctrines he so earnestly presented in his inaugural.

The State Prison convicts are now the *laborers* of the State, and we would most respectfully suggest, again, to those of our Legislators who feel a desire to improve the condition of the prisoner, and the condition of the State, to the article upon the State Prison Convicts, which appeared in the FARMER of Feb. 8th—Number 4 of this volume.

We believe our State could be greatly benefitted by employing prisoners upon public works; and with the five hundred convicts, we could soon build railroads from city to city, erect asylums and colleges, build water-works and canals, and thus generally increase the prosperity of our State, and at the same time benefit the prisoners. We would therefore respectfully suggest again this plan of employing prisoners, that great results may be attained thereby.

LECOUNT'S BOOKSTORE.—Purchasers of books and stationery, of splendid account books and standard literary works, especially, should by all means visit the spacious store of J. J. Lecount, Esq., whose special notice appears in our columns. It should be recollected that Mr. Lecount's is the old pioneer bookstore of San Francisco, and one that has done much to increase the sale of books and the love of books. This stock now offered is immense, comprising everything kept in a large establishment. We can with confidence invite purchasers to visit Mr. Lecount's store, assured they will be the gainer. Mr. L. is entitled to a liberal share of business, from the fact of having done much to create and build up a business in San Francisco.

ANTELOPE RESTAURANT, SACRAMENTO.—Strangers on visiting a city, always love a good breakfast, dinner, or supper. Many prefer a restaurant to a hotel. Now as we are pretty well acquainted with this fair city of Sacramento, we can conscientiously recommend the *Antelope Restaurant*. It is decidedly one of the very best places where a person can find good food well cooked, and brought before him in a neat and tasteful order; and when those that wait upon you, do so without noise or bluster, in an attentive and pleasant way—this kind of waiting on a hungry man, adds a zest to appetite.

DAWSON HOTEL, SACRAMENTO.—No hotel in our State is better prepared to receive visitors, and no proprietors can make better exertions for the comfort and convenience of their patrons. The "Dawson" is receiving a full share of patronage, and we are glad to notice its prosperity. S. Kelley, Esq., the host, and his gentlemanly clerk, are ever ready to receive their guests, and provide for them in a style suitable for the hotel of a Capital city.

DR. BUSHNELL ON CALIFORNIA.—This distinguished Divine has recently issued a Pamphlet, giving an excellent descriptive view of California, in her climate, social and moral condition; and presenting the resources of the State in climate, soil and productions, both in the departments of nature and art. We shall give selections from the Pamphlet at an early day.

HOLLOWAY'S OINTMENT, rubbed briskly into the muscles and glands of the throat and chest, has an astonishing effect in bronchitis, asthma, and all diseases that affect respiration. Hoarseness may thus be cured in a few hours. To clergymen, public speakers, and vocalists, it is, on this account, invaluable.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot.

☞ Persons purchasing articles advertised in our columns will confer a favor by saying they saw them advertised in the California Farmer.☜

NEW BOOKS.

☞ JUST received, from New York, several cases choice works; also, a complete assortment of Agricultural Books, to which we would invite the attention of our customers.

Frank Forester's Horse and Horsemanship of the United States, in two volumes; the finest work of the kind ever published in the country, can now be seen at our office, bound in different styles—Plain, and Turkey Antique. Having the sole agency of this valuable work, in California, we would invite lovers of the beautiful to call and examine the copies. Subscription books are now open, and those entering their names will receive this work at the earliest day. v9-1

LAYING OUT GARDENS.

☞ THOSE WHO WISH THEIR GROUNDS LAID OUT IN the best style, and those who wish them remodeled, can have them done in the most scientific manner, by sending to our Office their orders; or they will be waited upon, and designs made and Gardens completed from the rough sod. We have those under eye on whom we can rely to complete any plan of work of public or private Ground however extensive, and furnish all the required article of Trees, Vines, Shrubs, Plants, or Seeds.

AMUSEMENTS AT SACRAMENTO.—Having spent a week at this place and vicinity, we had occasion to notice the movements of this "gay city." The last week a very fashionable assembly was held at the National Theatre, in aid of the Schools, commencing with an exhibition of music and singing by the scholars of the school of Mr. Goodrich, and ending with a ball; the dancing continued till the clock told several of the small hours. It was a very splendid affair, and the proceeds for the schools netted about five hundred dollars.

The *debut* of Mrs. John Wood on Monday evening, at the Forrest Theater, was honored with one of the most fashionable audiences of the year. It was indeed a brilliant assembly, but the decision of the audience, of the press generally of Sacramento, and of all who know the taste of Sacramento, *it was not the style to win*. The farce of The Little Treasure, which preceded the play, won for Mrs. Judah unbounded applause! in truth it was splendidly played. Miss Grattan appeared and acted well. The second evening, an audience so much less in numbers, proves our remarks true.

The most *recherche* affair of the season was the subscription and complimentary Soiree at the Orleans. It was an elegant affair, truly unexceptionable. Beauty, fashion, elegance, admiration, splendid music, graceful and artistic dancing, and happiness, was only hightened by the sparkling gems upon forms of real beauty.

Sacramento can always make her scenes of pleasure complete.

THE many cures of dyspepsia and kindred diseases performed by the Oxygenated Bitters, after all other remedies have failed, should be sufficient to induce any one suffering from these complaints, to give the medicine a trial.

PAINTS, OILS and WINDOW GLASS DEPOT.

OLIVER & BUCKLEY

HAVE NOW LANDING, AND IN STORE—

4,700 boxes WINDOW GLASS, assorted sizes;
150 boxes STAINED and GROUND GLASS, assorted colors;
2,500 galls. VARNISHES, Tilden & Nephew's;
doz. Paint and Whitewash BRUSHES, Adams';

Together with the largest stock of PAINTS, OILS, &c., &c., in the State, which we offer for sale at lowest rates, at

86 and 88 Washington street,
9 67 and 69 Oregon street.

Vance's Branch.—New Gallery.

AMBROTYPES, PHOTOGRAPHS, Daguerreotypes and Melainotypes.

VANCE & CO.,
Corner of Third and J streets,
(Hiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerrootypes** and **Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all *to Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,
9-3m Sacramento.

Read This! Read It!!

E. B. DAVIDSON,

At His Store, Fourth street, near K, in the Old Dawson House—*SACRAMENTO*,

J. M. THORBURN & CO.,
19-tf 15 John street, New York.

☞ **Hemp Seed.**—A superior lot of pure seed just received at the office of the Farmer.

NOTICE TO NURSERYMEN.

☞ PARTIES who have ordered Nursery Stock from the Eastern States, to be forwarded by Express, should have made arrangements for the receipt of the same, or remitted charges, as all such freight must be prepaid without exception. Hitherto, a satisfactory guarantee from the shipper was considered sufficient—the charge to be paid at destination. Should any disappointment occur to our friends, this will be a sufficient explanation.
23 A. FROST & CO.

☞ **Farm Stock.**—Having completed our arrangements for the importation of choice stock, we are now prepared to receive orders for any of the following breeds, and would call the attention of those in want, to our unsurpassed facilities for the importation and improvement of the choicest stock:

Thorough-bred Devon Cattle,	Webb Southdown Sheep.	
Shorthorns do	French Merino	do
Thorough-bred Ayrshire do	Spanish do	do
Suffolk and Essex Pigs.	Cotswold do	do
	Chester White Hogs.	

Fancy Fowls—all the best varieties.

All communications addressed to us will receive immediate attention, and we shall be happy to correspond with any and all upon the subject. Address
WARREN & CO., Cal. Farmer Office.

☞ REGISTRY OF STOCK.—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.
☞ J. Q. A. Warren, just from the East, will be happy to see all interested in the subject, at the FARMER Office. January 8, '58.

☞ **A. W. FABER'S LEAD PENCILS.**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.
These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.
Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."
Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d VOL.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."
Extract from the Report of the Great London Exhibition, 1851:
On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not failed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.
Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York."
E. FABER, Sole Agent,
v2-1 6m 133 William street, New York.

☞ **Efficacy of the Oxygenated Bitters.**—From J. C. Dunn, Esq., late City Treasurer.
BOSTON, June 6, 1852.
Gentlemen: I have been for some years troubled occasionally with severe attacks of indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say I have received more speedy and effectual relief from the use of the *Oxygenated Bitters*, procured from you, *than from all others remedies*, and most cheerfully recommend them to all who suffer from a similar affliction.
Yours truly, JAMES C. DUNN.
Numerous certificates have been received from citizens of the highest respectability. Every dyspeptic will be amply repaid for a trial of this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 9-1m

Fine, beautiful hair—jet black or brown,
Or tresses, curling or golden—
Is the certain result—without chance or doubt—
Of the use of LYONS KATHAIRON.

☞ **The immense sale of Lyons Kathairon**—nearly 1,000,000 bottles per year—proves its excellence and universal popularity. It restores the hair after it has fallen out, invigorates and beautifies it—making it soft, curly and glossy—cleanses it from all Scurf and Dandruff, and imparts to it a delightful perfume. The Ladies universally pronounce it the finest and most agreeable article ever used.
Sold by all dealers, everywhere, for 25 cents per bottle.

HOTEL INTERNATIONAL.

San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present
Lessee and Managers,
A. S. HALEY,
JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most
DESIRABLE STOPPING-PLACE
For Families or Single Gentlemen,
during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.
A. S. HALEY, LESSEE.
ASSISTED BY: JOHN J. HALEY, and
E. R. ROBINSON, formerly of the New York Hotel.

The Publishers would ask Teachers to examine these works for themselves. Numerous favorable notices from distinguished sources have been received, and might here be appended, but are omitted, with the exception of one letter respecting Parker's Philosophy, and one respecting Porter's Chemistry, referring the reader to A. S. Barnes & Co.'s "Descriptive Catalogue," for any further information respecting the character and merits of any of the works mentioned, and of their publications generally.

Just published—Root's New Work on School Amusements; or, How to make the School Interesting, $1 25.
A. S. BARNES & CO.,
v9 51 and 53 John street, New York.

THE "HORTICULTURIST" AND Journal of Rural Art and Rural Taste.

(Commenced by the late celebrated A. J. DOWNING.)

Conducted by J. JAY SMITH, Editor of the North American Sylva.

THE increasing love of Rural Life has brought this popular publication into extended notice. Its success has been amply proved by a large addition of readers, and it is now offered to public patronage with confidence. It embraces in its scope of subjects everything pertaining to the country and country-pursuits, and aims to instruct while it amuses: it is, in short, as now conducted, a popular RURAL MAGAZINE, designed to interest all lovers of the Garden, the Country-house, the Cottage, no less than the Botanist, the admirer of the Green-house, Conservatory, Grape-house, Fruit Cultivator and Planter. Its correspondents are those who have long devoted their energies to these pursuits, and it is believed the number of these, and the information they impart, is greater than any other periodical can boast of either in Europe or America. Indeed, the work has become indispensable to the well-informed country-dweller, who, by a perusal of its varied pages, may maintain an acquaintance with all that is passing in the fruit-garden and orchard, the nursery, the villa, and with the beautiful in nature, whether it is improved by art or adorned by taste. In its Rural Magazine character it is addressed to all who love information, and it has thus become a welcome guest both in town and country. Its circulation now embraces the entire Union and Canada, and endeavors are constantly used to increase its attractions by a liberal outlay in embellishing it with costly engravings of fruit, dwellings, trees, and those numberless rustic adornments which make the individual home attractive.

A NEW VOLUME (13th year) commences with the January number for 1858: and it will be the constant aim to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style, each number containg 48 pages, embellished with a frontispiece and several other original and well-executed engravings. The volumes, taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature. As an advertising medium it has few superiors.

TERMS—Two Dollars a year; Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the Art. Price, $5.

☞ All subscriptions must be addressed to the Agents, or to ROBERT PEARSALL SMITH,
Nos. 17, 19, and 21 Minor street, Philadelphia.

LINDSEY'S
Double Acting Rotary Force Pump.

THIS is a new Pump, patented in America and England in 1855; and for Cisterns, Wells, Mines, Engines, Railroads, &c., has no rival: in that it works easier at great depths, discharges water at different hights, can be used for a hose, is made entirely of wrought and cast iron, without suction or packing, simple in construction, easily put in, not likely to get out of order, will last for an age, and is cheaper than any other Pump. It has a wrought iron pipe, side gearing and balance wheels, with everything complete to raise water by hand, from one to one hundred feet; and costs, boxed and shipped, from $18 to $60.

It must stand in the water, and will not rust.

Drawings and a full description sent to all parts of the world, free of postage, by addressing the general agent.

WHAT WILL THE HARVEST BE.

The following lines written like a series of parables, yet most truthful, we copy from the Maine Farmer; and as so much has been said and written upon the condition of our social institutions in California, we have take these lines and appropriated them to this subject, and now present them as illustrative of the

INFLUENCE OF WOMEN IN CALIFORNIA.

They are sowing their seed in the daylight fair,
They are sowing their seed in the noonday's glare,
They are sowing their seed in the soft twilight,
They are sowing their seed in the solemn night;
What shall their harvest be?

They are sowing their seed of pleasant thought,
In the spring's green light they have blithely wrought;
They have brought their fancies from wood and dell,
Where the mosses creep and the flower-buds swell;
Rare shall the harvest be.

They are sowing the seed of word and deed,
Which the cold know not, nor the careless heed,
Of the gentle word and the kindest deed,
That have blessed the heart in its sorest need;
Sweet shall the harvest be.

And some are sowing the seeds of pain,
Of late remorse and a maddened brain,
And the stars shall fall and the sun shall wane,
Ere they root the weeds from the soil again;
Dark will the harvest be.

And some are standing with idle hand,
Yet they scatter seed on their native land:
And some are sowing the seeds of care,
Which their soil hath borne and still must bear;
Sad will the harvest be.

They are sowing the seed of noble deed,
With a sleepless watch and earnest heed;
With a ceaseless hand o'er the earth they sow;
And the fields are whitening where'er they go;
Rich will the harvest be.

Sown in darkness, or sown in light,
Sown in weakness, or sown in might,
Sown in meekness, or sown in wrath,
In the broad work-field, or the shadowy path,—
Sure will the harvest be.

[For the California Farmer.]

Education.

Education is the acquisition of a correct knowledge of the external world, and of the laws by which its elements are governed, and also the right understanding of the various faculties and attributes of both body and mind, and the relation which man sustains in the universe of being, and the nature and tendency of those physical and moral laws to which he owes obedience, and which he must obey in order to secure his health and happiness.

There can be no period in our whole existence when we shall cease to acquire wisdom and knowledge, as the why, and wherefore, of all God's laws, are left for us to search out; for we cannot fully comprehend the penalty of any violated law but by our own experience; as a child, when told for the first time not to put its fingers in the blaze of a lighted candle, even when told why, is not satisfied, and, prompted by curiosity and a spirit of investigation, resolves to run the risk, and reaches forth and grasps the brilliant taper in its hand; and though it may suffer with the pain of which it had been admonished, it has learned more perfectly what is meant, when, at another time its mother calls out, "it will burn you;" and thus through life is knowledge perfected by experience.

Observation and experience are the truest sources of knowledge; hence, the adage, "experience the best schoolmaster;" but it would be much more for the happiness, as well as the progress of rising generations to profit by the experience of others, by shunning their errors and practicing their virtues. But this lesson is hard to be instilled into the minds of impetuous youth, whose buoyant spirits are impatient of restraint or control, and the consequence is, that when they are overtaken by the rough storms of adversity, they are like vessels at sea which have more sail than ballast, and if not shipwrecked at once upon the hidden rocks of dissipation, or drawn into the whirlpool of crime, it will require years of labor to correct the errors and evils which they might never have incurred, had they but attended to the timely warning, and kind admonitions of those who had gone before; and the progression of the world must ever be in proportion to the right use made by present generations, of the experimental knowledge of preceding ages. But in the adoption of the opinions of others, let reason ever be our guide; otherwise we may be led deeply into error; and many false doctrines have thus been propogated from lack of investigation.

How much then it is incumbent upon each generation, to leave a legacy behind, which shall be as free from error as possible; leaving the paths of knowledge cleared from the rough impediments which they themselves had to encounter, many of which still lie in the paths of youth, like stumbling stones, and we should try and remove them. One is the too close confinement of small children in the school-room which is contrary to the physical laws of their nature, the violation of which produces weak and enfeebled bodies and prematurely developed minds. Also, the unnecessary taxing of the memory to repeat words parrot-like, to which they do not attach a single idea; and for thus delivering a speech or lengthy poem, *verbatim et literatim*, of which they do not understand the least import, they receive a medal, and the congratulations of their teachers, parents, and friends; and in this manner I used to repeat the "Hill of Science," which imparted to my mind less of instruction than the most simple of "Mother Goose's Melodies."

Children should not be sent to school too young, they should first be taught by their parents at home the principles of right, the obligations of the moral law; for the seeds of religious truths must be sown early, thus fortifying the heart and mind to resist evil, when brought in contact with such as are found in every school, as well as in every larger community, who will endeavor to lead them astray from the paths of rectitude. But the child that has been rightly instructed at home, will be found to meet every enticement to sin, or to do wrong in any way, by this, to them, unimpeachable authority, "it is wicked, *for my mother says so.*"

But far otherwise is it with those which have hardly been taught the difference between right and wrong; for when not immediately under the eye of their parents, they will follow the bent of their own inclinations, and ever be led by the froward and designing, until both parents and teachers will fail to instil into their mind the first great lesson of life—*obedience.*

Again, the premature study of the dead languages, or any other than that of our mother tongue, is an error in the path of youth. First render deep and wide the natural channels of thought; for no one can excell in speaking or writing in a language in which he does not think; and as words are but the symbols of ideas, the necessity of understanding different languages is mainly that we may be able to trace them to their source, and thereby collect and bring down to the present, the knowledge of former times; and that we may have a clearer knowledge of the names and terms still retained in the original language, in which many of the sciences were first studied; but like the study of geology, which is necessary to give us a more perfect knowledge of the earth, does not particularly benefit the cultivator of the soil; so the dead languages serve only to give us a deeper insight into the origin of our own beautiful and far superior English language.

It is well to understand all knowledge, but let us begin and learn every thing in its proper time and place, and then we may have no fear of crippling or dwarfing either body or mind, and all become giants in intellect, and angels in heart and life.

Another great evil is our light literature, which is, like our tables, set out with every thing that can tempt the appetite of the most fastidious, with no one to preside and deal it out judiciously; but every one, both young and old, sick or well, told to help themselves, and the natural consequence is, that the young and inexperienced, like children at table, select the richest and most indigestible dishes, which should be used only as a desert, if at all; and this is why we see so many invalids of mind and heart, not possessing strength of mind and moral courage enough to stem the vitiated current of popular pride and fashion.

There are, however, many sober truths often presented in the lively and attractive garb of fiction, and were it not for the false coloring they are too apt to give to real life, it would be a pleasing way of imparting instruction, and be strewing the rugged road of knowledge with flowers. Two of the most glaring faults of most novel-writers, are in ascribing to their heroine, of the age of "sweet sixteen," a strength of mind and decision of character, which are but seldom acquired in a lifetime; and again, in representing marriage as the sole great end and aim of life, when we only then leave the quiet harbor of parental protection, to encounter the far more boisterous waves of the broad ocean of life.

But the bright angel of hope would buoy up my sinking spirits, and bid me look upwards, and away into the bright future, beyond the turmoil and tempests of earth, where she sits smiling and beckoning onward the weary pilgrims of this unhappy world; and to this bright angel let every despairing son or daughter of Adam, ever look with an eye of faith, and they will find beneath the shadow of her wings a safe refuge from grief and pain.

And now I would say a few words upon the importance of preserving and lengthening the morning of life, the bright spring-time of youth, which is now-a-days being shorn so much of its freshness; how beautiful and instructive is childhood, when all its sweet simplicity is preserved; but without this, children appear but as caricatures upon those of a larger growth, and cease to be pleasing or attractive, and are often repulsive, both in manners and appearance.

The ancient Romans prohibited their youths from wearing the "toga" or manly gown until they were fourteen years of age; and no doubt made them know and feel that they were but children till then; and all who wish to preserve a green old age must take care to let the dews of life's morning lie long upon the shady recesses of the heart.

It is with pain I hear people regretting that they are growing old, that their beauty is fast fading away, for, like the seasons, every stage of a well spent life, has its beauties and its pleasures, and old age should be to them whose minds are well stored with knowledge like trees in autumn, dropping their rich fruits and foliage for the benefit of earth and its children.

Let all remember this truth: that a rough and uncomely exterior cannot long hide a beautiful soul; and had we less of pride and more of the simplicity of the child, that loves its grandmother no less because she is old and wrinkled, we should not be so often captivated by the mere exterior, but would learn to perceive the far more important and lasting beauties of the spirit within.

But it is sad to see those who have neglected the cultivation of their minds, and have been content, like a butterfly, to display their personal charms to an adoring crowd, which the first breath of adversity will scatter far from them, alas! when too late, and their outward charms have fled, find that they have neglected to sow in the spring-time of life, the seeds of truth and knowledge, and are "left to beg in harvest and have nothing."

And now fair daughters of America (to you will be intrusted the welfare of future generations), make yourselves beautiful by adorning the mind with useful knowledge, and the heart with the holy principle of charity, and age, so far from impairing your beauty, will only add to it a purer luster, which will grow brighter and brighter, unto a perfect day. Edith Montressor.

An Example for the Queens of California.—As American farmers are lords of the soil, they, of course, are kings in their own dominion, and consequently the women are queens, and this article will apply to them; at all events, it is an example worthy of imitation everywhere:

How a Queen Dresses.—The Queen, at the late meeting of the Evangelical Convention at Berlin, in Prussia, attended by the Princess of Hesse, and two other ladies of the Court, was entertaining the American and English ladies on the portico. I could not help wishing that more of my fair country women had been there to take a lesson in plainness of attire from this Queen of Prussia, and sister of the Emperor of Russia. She had no jewelry or ornament of any sort; even the bracelets around her wrists were simple bands of ribbon. She received us with grace and simple courtesy, and was evidently delighted with the opportunity of meeting so many Christians from distant lands. I am told by one who knows her private life, that she is a woman of pious and devotional habits. I think there is no doubt, also, of the King's sincere sympathy with evangelical godliness. All his appointments to ecclesiastical offices are made from this class of men, and he surrounds himself as far as possible with evangelical influences.—[Dr. McClintock.

[For the California Farmer.]

Old Maids.

"Some how or other, Edith, I hate old maids, they always give themselves so many consequential and sanctimonious airs; good for nothing but to sit in the corner and knit, or to pare apples, gather garden seeds, darn stockings, poke the fire, look after young school girls' love affairs, nurse the puny kittens, and trot mad, squalling babies."—[Extract from "Alice *tete-a-tete* with her friends on Thanksgiving Night."

Only listen! as if the above catalogue were not enough to furnish employment for a lifetime. Why, "old maids" are an actual necessity on the present stage of existence. If they were not forever knitting, what bitter wails from the woful proprietors of frost-bitten feet would on a cold bleak night like this, assail our ears, and our tables would be minus many a rare delicacy which now delights the epicurean palate, were we dependent upon those delicate fingers, so soft and fair, instead of having an "old maid" to pare the apples. Then the garden seeds must be gathered, and the fire replenished; and as for the young school girls, why in what endless enlargement might their love affairs be wrought, were it not for some benevolent Aunty, who skillfully and untiringly unwinds the skein of affairs, and weaves the tangled web into a fair-sounding tale, from which to draw a moral for the benefit of her innumerable friends, while mama, perchance almost unmindful of her child's existence, was paying her devotions at the shrine of pleasure.

And what a miserable life poor puss must lead among romping girls, rude boys, and tiny cions of the father's house, had she not some place of refuge, some sheltering lap and friendly hand to smooth her rumpled fur and allay her well-grounded fears. As for "squalling babies," we always thought they were the old maids' particular abhorrence, and supposed they belonged to the list of matrimonial ills; that their voices were raised in the hush of night for the mother's especial benefit, clothing her dreams with harmonious visions of elfs and imps, disguised in the form of angels. Old maids, indeed! I intend to join the fraternity as soon as they will admit me into their honored ranks, and then—why then, I *hope* to become a really useful woman.

But list ye, Alice! I shall not banish all love and gentleness from my heart; I shall not suffer self-love or ambition to supplant the earnest affection, I wish ever to maintain for fellow travelers over "earth's rugged pathway." I shall not believe the sweets of life have all turned acid and bitter.

But if home ties confine me not, I will hie to the sick ones couch, and seek to beguile her hours of their weariness. I will tell of fair fields through which I have wandered, and from which I have culled the flowers that I bring as my offering, and the song of the laughing waters which meander amid the toll grass, and the murmurs of the night winds, I will translate into pleasing melodies with which to woo her heart to pleasing thoughts and happy memories.

Where sunny faces congregate, and tiny feet trip lightly; where childish voices wake the echoes, and childish laughter vibrates o'er the heart-strings, I will mingle words of counsel and teach of heaven-born wisdom, thus striving to lead young hearts in their purity close to the feet of the Heavenly Shepherd. I will be kind to the poor brutes, also, for although God made them subservient to man, yet he taught us to be merciful, and he will render unto us even as we render unto them.

Shall earth's joys be unto me then as a sealed fountain, and shall not some hearts enshrine my name in their memory?

Ah! I have known old maids more gentle, more self-denying, more holy than this; and the sound of their gentle voices comes now "like the strain of a long-forgotten melody," bringing back joyous remembrances of childhood, and making me more strongly desire to emulate their hallowed virtues. Sallie.

January 16th, 1858.

New Treatise on Land Surveying.
JUST PUBLISHED BY
E. C. & J. BIDDLE,
PHILADELPHIA.
A Treatise on Surveying, by S. Alsop. In this work, the theory is plainly and comprehensively presented; directions for practice are given definitely and precisely; and everything which an extensive business in Land Surveying would be likely to require is embraced. Price per copy, mailed to California, $2, postage included. Price of the KEY to the work, mailed to California, 75 cents.
E. C. & J. B. also publish the following popular educational works, and many others extensively used in the Schools and Colleges of our country: and they would respectfully invite School Directors and Teachers to send for a copy of the descriptive catalogue of their publications:
Crittenden's Treatise on Book-keeping. The series comprises the four volumes below named, and for each of them a KEY, and a set of miniature BLANK BOOKS for the exercises:
1. Treatise on Single Entry Book-keeping.
2. On Single and Double Entry, for Common Schools.
3. do do for High Schools.
4. do do for the Counting House.
The volumes are severally the text-books in Commercial Colleges in Boston, New York, Philadelphia, Cincinnati, Chicago, St. Louis, Louisville, etc.; in most of the Normal Schools, and a great number of the High Schools of our country in the Public Grammar and Evening Schools of Philadelphia, etc.; while as a book of reference for practical accountants the Counting House editions, undoubtedly, the most popular work on the Science of Accounts, published in the United States.
Cleveland's English Literature. *Twenty-fifth Thousand just published.* 1. CLEVELAND'S COMPENDIUM OF ENGLISH LITERATURE, from the 14th to close of 18th century; chronologically arranged; consisting of Biographical Sketches of the Authors, and selections from their works, together with Notes explanatory, etc. 2. CLEVELAND'S ENGLISH LITERATURE OF THE NINETEENTH CENTURY. A sequel to the "Compendium"; arranged on the same plan as it. The above two volumes are text-books in many of the Colleges, in the principal Normal Schools, and in a large number of other first-class Seminaries of our country; and they may with confidence be recommended as an admirable guide or chart for private students of English literature.
Cleveland's American Literature. *Cleveland's Compendium of American Literature*, on the same plan as the author's "Compendium of English Literature," will be published early next year.
Harrison on the Rise, Progress, and Present Structure of the English Language.
The Works of Thomas Dick, LL. D. 10 vols. 12mo. Few books are better adapted for the School or the Family Library, than the works of Dr. Dick.

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

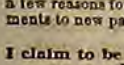
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

Pioneer Establishment.



FOR curing of FISH of all kinds; also for the curing of prime HAMS AND BACON. Always on hand, the best article of Smoked and Pickled Salmon and Herrings, warranted of superior quality, in packages to suit.

The Subscriber is now engaged in Pork Packing, and is desirous of extending the business; for that purpose he will purchase well-fatted Hogs in any quantity.

The Smoking of Beef is also a branch attended to at this establisement.

☞ THE PEOPLE'S PREMIUM ALE. ☜

THE undersigned beg leave to make known to their friends and patrons that they are hard at work doing all they can to supply the orders that are rolling in upon them from all quarters.

Our Card in another column will explain that we go for the "PEOPLE'S PREMIUM," and as we feel they have awarded that to us, we do not fear any opposition or competition—

"Competition is the life of trade,"

And we cheerfully yield to all our competitors a fair field and an open trade, and abide the judgment of the public most cheerfully.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.
Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Principal Office and Manufactory, No. 96 ARCH STREET Philadelphia, Pa.

WHEELER & WILSON
MANUFACTURING COMPANY'S
SEWING MACHINES.
343 Broadway, New York.
Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

H. C. HAYDEN, AGENT,

MACHINES AND IMPLEMENTS.

TREADWELL & CO.,

IMPORTERS,

N. E. corner California and Battery streets,
SAN FRANCISCO,

have now landing, and will receive by every packet from New York and Boston, the most extensive assortment of

FARMING MACHINERY
and Implements,

ever brought to this market, embracing all the

Latest Styles and Improvements,

which will be sold at lowest rates.....consisting in part of:

REAPERS:

MANNY'S COMBINED REAPER AND MOWER, WITH WOOD'S IMPROVEMENT..These justly celebrated Machines have become too well known in California to require more than a simple announcement where they can be had. We are sole agents for the Pacific coast, and none genuine elsewhere.

McCORMICK'S REAPER....This universally approved Reaper we keep constantly on hand, and are Agents of the Maker.

KETCHUM'S COMBINED REAPER AND MOWER....This Machine is now very popular—having been greatly improved the last two years.

BURRALL'S IMPROVED GRAIN REAPER. This Reaper cuts six feet, and is one of the strongest and most durable Machines in use.

SEYMOUR AND MORGAN'S REAPER; without the Raker attachment and all late improvements.

HUSSEY'S REAPER....Baltimore make.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.
BOGARDUS' 2, 4, and 6 horse do do.
FIELDS' 2, 4, and 6 do do do.
EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times. Extra points and parts can always be had.

This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.
Do. CUTTERS—Several sizes and kinds; hand and power.
HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.
GRANT'S GRAIN CRADLES—In cases of one dozen each.
Do. FAN MILLS. Also, the Boston Mill.
CORN SHELLERS—Hand and power.
Scythes and Snaiths—best steel Scythes and Lamson's Snaiths.
Hay and Barley Forks—2, 3, and 4 tine; of best makers.
Carpenter's Patent Wire spring-Tooth Horse Rakes, 10 to 15 feet long, with wheels, and seat for driver.
Ox Yokes and Bows—all sizes.
Churns—Thermometer, Dash, and Cylinder; also, Dog Powers for do.
Garden Barrows. Cauldrons and Furnaces. Cultivators.
Horse Hoes. Seed Sowers. Harrows.

Field and Garden Seeds

Of every description, *via* the Isthmus—this year's growth (1857).

Steam-Engines, 4 to 15 Horse Power.

Suitable for Ranches or Mining purposes.

Portable Flour Mills and Mill Stones—Noyes' make. All sizes, 16 inch to 4 feet.

Belting, Bolting Cloth and Packing—All kinds and sizes of the above.

HARDWARE—The best stock in the State.

MINING GOODS—All kinds in use.

COOPERS' AND TANNERS' TOOLS—Full assortment.

Baling Wire—Annealed.

Hay Rope—Best Manila.

Grindstones—Best dressed Nova Scotia; from 6 inches to 4 feet diameter, packed in casks in sawdust.

Wire Fencing—A neat article for inclosing Gardens, Heneries, &c. Also, for Ornamental Garden work, Grape and Rose Trellises.

Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c, &c. 9v-4

Grand Chess Tournament.

With a desire to promote the noble science of Chess playing, we cheerfully give place in our columns to the Plan of the Committees which are announced in the following circular.

When this game and the game of billiards shall be introduced into our wealthy families, and all families that can possibly bear the expense of fitting up rooms appropriate for such games, then will many other games and sports of an objectionable character be laid aside by individuals; and we believe there are many cases at the present time, where more money is wasted yearly by persons, than the cost of a family billiard room.

We are confident that the fitting up of rooms for games of this kind, where the females of a family could participate, would tend much to increase physical beauty, as well as develop the highest faculties of the mind; and when a proper attention is given to such subjects, we shall see places of dissipation connected with these games dried up, and a higher tone given to society; for these are games that rightly direct the physical and moral nature of man, and aid in the highest degree to develop the powers of the mind. We wish the greatest success to this convention of mind, of skill, and of science:

SAN FRANCISCO, March 1, 1858.

EDITORS FARMER: I beg leave to submit to you the accompanying Circular, embodying the plan upon which a Grand Chess Tournament is to be played in this city, commencing on the 20th inst. Your coöperation in aiding to make it worthy of California, and the noble game which it seeks to promote, upon these shores, is earnestly solicited. All communications should be addressed to the undersigned. Your obedient servant,

WM. R. WHEATON,
Pioneer Society's Rooms, San Francisco.

PACIFIC CHESS TOURNAMENT.

The Committee of Management appointed to carry out the first Chess Tournament ever held in California, have adopted the following plan upon which it will be conducted:

The Tournament will be open to all comers; the players to be classified by the Committee of Management in the following manner, viz: The First Class to be composed of acknowledged first class players, receiving no odds from any others in the State.

The Second Class to consist of two divisions; the first division to comprise those players receiving from the first class players no greater odds than the Knight; the second division to embrace all others who may choose to enter the lists.

The entrance fee to be five dollars. The method of play to be similar to that adopted at the National Chess Congress.

In order to raise a sum sufficient to defray the necessary expenses of the undertaking, none but subscribers to the general fund will be admitted to the rooms during the progress of the Tournament.

After defraying the expenses of the Tournament, the balance remaining of the fund, will be expended for suitable prizes, to be awarded to the victors in the Tournament. Two to the First Class; and two to each division of the Second Class.

A prize will also be given for the best original problem that may be presented, of not less than three, nor more than five moves.

RULES AND REGULATIONS.

1. None but Subscribers to the General Fund will be admitted to the rooms, or allowed to participate in the play.

2. The names of all competitors must be sent in to Wm. R. Wheaton, Esq., Corresponding Secretary of the Committee of Management, on or before the 20th day of March, at 12 o'clock, M.

3. The combatants are to meet at the rooms on Monday, the 20th day of March, at 7 o'clock, P. M., when they will be classified, and paired off by lot. The playing will commence on the following day.

4. The games are to be played in accordance with the Code of Chess Rules, published in Staunton's Chess Player's Hand Book; and all disputed points referred to a Special Committee, appointed by the Committee of Management; whose decision must be considered final.

5. The hours of play will be from 12 o'clock, A. M., until 12 o'clock, P. M.

6. Any player failing to attend within half an hour of the time appointed, must forfeit one dollar to the Fund, for each and every non-attendance; and after three forfeitures he will be permitted to enter the lists again.

7. One game, at least, is to be played at a sitting; after four hours, however, at the request of either party, a game may be adjourned for one hour. All play will cease at 12 P. M., or as near that time as both parties in a game shall have played an equal number of moves.

8. In cases of unreasonable delay, the Committee of Management can limit the time to be consumed on any move, to thirty minutes.

9. Every subscriber of $2 50 shall be entitled to visit the rooms at his pleasure. Tickets for a single admission may be issued to subscribers at fifty cents each.

10. Every player entering the lists in the Tournament must consider himself *ipso facto* bound by all Regulations issued by the Committee of Management.

WHY is a loafer in a printing office, like a shade tree? Because we are glad when he *leaves*.

Wholesale Produce Report.

THE condition of the Flour and Grain Markets is such as to excite the attention of the curious. The journals of the day differ widely in their views. By the arrivals from Oregon, some 2000 barrels have come to hand, and more to follow. Any observer of movements at the present time cannot but see efforts made to keep the prices up; and while there is no question but that there is a much less stock on hand than a year ago this month, there is no doubt that we now have on hand in our State enough to carry us till next harvest, to which will be added several thousand barrels from abroad. And it is also evident that great economy is used among the masses, thereby saving considerable quantities by the use of other materials.

AGRICULTURAL.

FIRST PREMIUM IMPLEMENTS.

TO THE FARMER
AND
Dealer in Agricultural Implements.

PLEASE READ.

HAVING erected a good shop, with facilities not heretofore possessed by any house in this State for manufacturing Agricultural Implements, I beg leave to announce that I am now prepared to receive orders to any extent in this line of business. I employ none but the best and most experienced mechanics, and use only the very best materials. In this way I hope to promote the interest of the good mechanic, the interest of the farmer, the interest of our young and growing Agricultural State; and at the same time that interest which is foremost with all mankind—self. I have had twenty years experience in the manufacturing business;

I ESTABLISHED THE FIRST SHOP,
AND
MADE THE FIRST STEEL PLOW

in the State of Wisconsin, in the dawn of her great agricultural improvement. I also

MADE THE FIRST REAPING AND MOWING MACHINE
AND
THE FIRST STEEL PLOW

Ever Made in this State;

Therefore, with my experience, and a knowledge of the wants of the country (which are different from most others), I feel confident that I can and will do much for the interests of the agriculturists of this county; and in my efforts I trust I shall meet with a good share of patronage from the farmer and all interested in this matter, and in the interest and development of the agricultural improvement of our State.

I design, and have under way, the manufacturing of

1,500 Cast Steel California Plows;

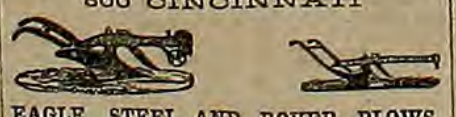
THE DEEP TILLER;
OR,
"QUEEN OF THE WEST;"

Of stock entirely superior to any ever worked before in this country. Also,

GANG PLOWS,
HARROWS,
CULTIVATORS,
FANN MILLS,
&c., &c., &c.

In addition to what I manufacture, I shall constantly be receiving implements from the best makers of the Eastern and Western States, amongst which are now due

500 CINCINNATI



EAGLE, STEEL AND ROVER PLOWS,

which stand, in point of true merit and worth, altogether higher than any others in the great agricultural State of Ohio.

☞ Please favor me with a call, and see for yourself, and be convinced that I am publishing no humbug, but simply facts as they are; and that your young State can, within itself, already provide the farmer with implements inferior to none now in use. All kinds of agricultural implements and machines repaired on short notice, and in the best manner, and on reasonable terms.

THOS. OGG SHAW,
33 Sacramento street, near Davis,
*** Shop corner Davis and Sacramento streets,
v8-7 6m San Francisco.

HORTICULTURAL.

THOMPSON'S
SUSCOL NURSERIES.
Situated on the Napa River, at Suscol Ferry.
NAPA COUNTY.

THE undersigned wishes to call the attention of the public and patrons of these well-known Nurseries to the present extensive stock of

FRUIT AND SHADE TREES,

GRAPE-VINES, etc;

Also a choice lot of *GARDEN and GREENHOUSE PLANTS, ROSES, SHRUBS, &c.*, Comprising all of the Very Best Varieties of Cultivated Fruits, such as

APPLE, PEAR, PEACH, PLUM, NECTARINE, APRICOT, CHERRY, ALMOND, QUINCE, and FIG TREES. GOOSEBERRY, CURRANT, and RASPBERRY BUSHES, &c.,

Together with a large lot of

Nut-Bearing and Shade Trees,

Consisting in part of Black Walnut, English Walnut (or Madeira Nut), Shell-bark Hickory, Elm, Weeping Willow, Locust, Sugar and Silver Maples, &c.

Grape-vines of all the Best Foreign and Native Varieties.

The Fruit Trees offered for sale are all budded and grafted from the best, most approved and popular varieties now cultivated in the United States and Europe: all of which are growing, and a large majority of which have fruited in our own orchards and vineyards, under our own immediate inspection.

Our trees are of one and two year's growth from Bud and Graft, thrifty and of large size; all of which have been grown *without irrigation*.

We would call particular attention to our large stock of Apple Trees, which for vigor of growth and beauty of form, cannot be excelled in the State.

Our stock of Garden and Greenhouse Plants, Roses, Shrubs, &c., comprise all the leading varieties most desirable for beautifying private gardens and residences.

CATALOGUES containing a full list of all the varieties, with a brief description of each, together with their time of ripening *in this State*, will be forwarded either by mail or express, to all who are desirous of purchasing trees.

Orders from a distance will be promptly attended to, and carefully packed for shipment.

Our prices will be as low as *reliable Trees, Vines, &c.*, of like quality, can be bought for in any Nursery in the State.

Our terms are CASH on delivery of the trees at the Nursery or *approved notes* for a short time, bearing interest. Parties desiring to purchase can apply either in person or by mail, or by Wells, Fargo & Co's Express, to

S. THOMPSON, at the Nurseries.

Or to S. PERKINS & Co., corner of Second and M streets, Sacramento; DERBY & BALDWIN, Petaluma; GOODMAN & Co., Napa City,—*Agents who will show samples and receive orders.*

☞ The above-named gentleman are our sole agents, in whom the public can place implicit confidence, and all who may favor them with their patronage can be assured that they are not getting Trees from *Auction Houses* and *Peddler's Wagons*. 21-3m

One Half Dozen Plants	1 50

☞ Good Plants for setting, of a second size, will be sold for $100 per 1000 Plants, or $12 per 100 Plants.

N. B.—All Plants ordered of us will be taken up and packed with the greatest care, and under our own personal supervision.

Of the many thousands sent out by us last year, we have heard very few instances of failure, notwithstanding that they have been forwarded to *every part of the country, and to California, with perfect success*, and the setting out has often been entrusted to unskillful hands.

Printed directions for setting and cultivating are sent with every package.

Ravenswood Fruit Garden
PLANTS.
WHOLESALE AND RETAIL.

Brinckle's Orange Raspberry, $70 ₱ thousand, $8 ₱ hundred.
Col. Wilder Raspberry, do do
Cushing Raspberry, do do
Thunderer Raspberry, do do
Linnæus Rhubarb, $50 ₱ thousand, $8 ₱ hundred.

ALSO,

Blackberries: New Rochelle or Lawton, Newman's or Thornless, $15 ₱ hundred.
Strawberries: Hovey's Seedling, Boston Pine, Large Early Scarlet, $5 ₱ thousand, $1 ₱ hundred.
Currants: Black Naples and Cherry, $10 and $12 ₱ hundred.

ALL the above plants of best quality; we cultivate most of them for market fruits.

THE BRINCKLE'S ORANGE RASPBERRY, for market or garden, is considered the best of all Raspberries: is unequaled in flavor and beauty; flavor is rich and vinous; and color beautiful bright orange: a very vigorous grower; hardy and exceedingly prolific.

The Cushing and Col Wilder are the best for making jams, preserves, syrups, &c.

THE LINNÆUS RHUBARB is a new variety originated by Myatt of England, who also originated the Victoria, on which this is a great improvement in both *flavor* and *productiveness*.

Its flavor is deliciously aromatic and spirited, and it is entirely free from the toughness and stringiness which characterize the Victoria, but when cooked becomes a fine uniform pulp, like the most tender apple. The plant is a very strong grower, more productive than the Victoria, and very hardy.

We cultivate most of the above Fruits for market, and selected them from our Fruit Gardens, as the choicest varieties known. Brinckle's Orange Raspberry and Linnæus Rhubarb especially are of exceeding excellence.

Orders will be promptly attended to in the order in which they are received, and Plants packed in careful manner.

Terms cash. Bills payable on delivery of Plants to the agents, or order of the purchaser.

Our plants will be ready to ship any time between the first of November and first of April. Circulars with full description of varieties and testimonials, can be had at the office of the California Farmer, San Francisco.

FREEMAN & KENDALL,
RAVENSWOOD, L. I. NEAR NEW YORK,
54 William street, New York City.

"We have visited Messrs. Freeman & Kendall's Fruit Gardens, from which they are now offering to sell Plants; and we can say their Plants are of very superior varieties and well grown, the Orange Raspberry and Linnæus Rhubarb particularly; we take pleasure in recommending them to the public."

The Proper Time to Plow.

EDITORS FARMER: In the FARMER of the 26th ultimo, I observed a letter on the proper time to plow, from Mr. Thomas J. Henley, the Indian Agent, which I consider one of the most valuable communications that have appeared in it for a long time. It is plain, practical, and to the point.

As I have been endeavoring to impress upon your readers: In consequence of the altered circumstances under which we are placed in California, we must adapt our system of Agriculture to those circumstances. This one lucid letter of Mr. Henley is of itself enough to prove it. Such men, by laying the foundation of a system adapted to our wants, do more good to a young State like ours than a hundred mere broachers of theories, perhaps as vague as they are impractical.

Not long ago, I read a well written treatise on the Agriculture of Tasmania (Van Dieman's Land), in which the writer stated his suspicions, that although the country was highly productive, he doubted whether the colonists had yet discovered the proper times at which to plant and sow. Tasmania is an old country compared with our young State. Let us not suppose that Mr. Henley must be wrong, because the practice which he recommends has not been more generally adopted.

Mr. Henley's system seems the first beginning of *summer-fallowing*—not what is called fallowing here, but a well-wrought naked summer-fallow, such as farmers in former times, in all countries, used to set down as the *ne plus ultra* of good farming; and the whys and wherefores of which the reader will find satisfactorily explained in Liebig's Organic Chemistry.

My father used to tell an anecdote of the first introduction of fallowing into the North of Scotland, which you will excuse me for relating, as it shows how trifling a circumstance produced an agricultural revolution among a people who are notorious for the tenacity with which they cling to their old opinions: Consequent on the Rebellion of 1745—when the Scots mistook the loyalty which was due to their Sovereign as the representative of Constitutional freedom, for a dangerous doctrine which claimed for the exiled family of Stuart a right to govern irrespective of how they discharged their duty—the Government deemed it prudent to quarter in the principal towns small detachments of English soldiers, for the purpose of watching the movements of the rebels in their ordinary transactions among the common people. One of those stations was the town of Banff, which is the chief town of, and gives name to, the County. As the soldiers had not much to do, and their discipline was not very strict, they used to stroll away to a considerable distance among the farmers. Perhaps they had instructions to do so. They also occasionally amused themselves by fishing on the Deveron, a respectable sized river which enters the sea at Banff.

On one of these occasions, a soldier who was thus engaged, either because the fish would not bite, or because, when a farmer's boy in his own merry England, he had seen a system of farming so much superior to the clumsy practice of the people among whom he now found himself, or that he thought he could screw out of some stingy boor a pot of home-brewed ale to wash down his not over sumptuous dinner, in exchange for the information which he could afford him—the event has transpired too long ago to be able to obtain correct particulars. Be this as it may, he concluded to call on the then farmer of Clayfolds, a farm which is situate on the banks of the river, in a very fertile district in the immediate vicinity of the far-famed and romantic Bridge of Alvah.

On calling on the "gash farmer," he told him, in few words, that he had not seen such fine land since he left England, and that he regretted much that he did not cultivate his fields in a more consistent manner, and asked him—why he allowed his best land to be so overrun with weeds? and why he did not fallow it? What did the simple countryman know about fallowing? He had never heard of such a thing. How was it done? What could he effect by fallowing? The soldier told him that, instead of the thin, scanty crop which he was sorry to see growing so choked with weeds on such land, he could raise more than double his present crop, and without a single weed to molest him. The farmer, like Desdemona, listened "with a greedy ear;" but the soldier concluded that his was too valuable information to impart without a consideration. It was not money, however, which he wanted. He had another predilection more characteristic of his cloth. Soldiers have always been noted for one of the qualities exhibited by Scott's "Donald Caird," being at least as intimately acquainted with "ilka wife that sells gude liquor," as the rules and practice of good farming. So he proposed to the farmer, that, for a Scotch pint (about two quarts) of Lucky Brown's knockemdown, he would teach him the whole art.

This Lucky Brown was the good lady of an alehouse, and in especial favor among the soldiers, in consequence of her having adopted a rule recommended by themselves—to put a measure of malt more, and a measure of water less, into her mash-tub—whence the appropriate name with which they had been pleased to christen her new bantling.

Perhaps the gudeman of Clayfolds was a good fellow of the order of Tam O' Shanter. Perhaps he concluded that it was not unlikely that the English, who had lately whipped them so soundly at Culloden, might be as much their superiors in the Art of Agriculture as they had proved themselves in that of War. Perhaps he was actuated by both motives. It is of little consequence what his motives were. The bargain was struck, and to Lucky Brown's they hied away together.

Whether the soldier did not *browbeat* the rude rustic of the North, from a pretence of devotion to the sovereign against whom the farmer's countrymen had so lately been in arms, or whether he *wheedled him* to get repeated draughts (from the "four-gill chap") of harder liquor than knockemdown, to satisfy the "lowan' drouth" of his comrades, my father, who cared as little for such orgies as you or I do, never mentioned. He merely related that the farmer stayed with the soldier all night, and came home with his purse empty. But he had got the worth of his money. Drunk or sober, let a Scotchman alone for that. The farm of Clayfolds, from that day forth, was farmed in a different manner. The fallowing, which had been recommended to him, was put in active practice. The first crop which he reaped from his fallowed land was more than double what he had ever gathered from it before. He became a rich man; and, till the day of his death, gratefully acknowledged that the best-spent money he ever spent in his life was at Lucky Brown's, among the drunken English soldiers.

AGRICOLA.

MILLERTON, March 9th, 1858.

[For the California Farmer.]

Facts About Plowing.

LAGUNEZ, March 8th, 1858.

MESSRS. EDITORS: I now beg leave to say, through your most valuable paper, a few things in reference to Wheat and Grain-growing in this part of the State. When I first came to this county, in 1852, I advocated that it was all-important to plow our lands in the spring-season for the next year's crop, and was met by this objection: that in this, California, the seasons were dry and hot, and the lands would be injured by the great drought and heat that prevailed in the summer season; therefore it would not do to plow and leave the ground so exposed, destitute of a covering by some kind of crop. Notwithstanding the argument made, I was desirous to know if such was the fact. I was inclined to dissent and differ in opinion from such notions. So in the spring of 1853 I tried the experiment, this being the first spring I had enjoyed in this State. The result was most astonishingly satisfactory. The ground so plowed was sown in December, fall of '53, and the yield was one-third to one-half more than the same land sown the same day, that was only then just plowed; and those of my neighbors who had opposed this mode of farming acknowledged their error and began to spring-plow to some extent.

Yet too little attention is paid to this branch of farming, so far as regards spring plowing, as I have stated to you and your readers in former years. And here let me say to your many readers that there is another serious evil in regard to plowing: Often the rains do not come until late in the season, and then not in sufficient quantity to wet the earth properly for plowing; yet the work is commenced, and hurried along with, in a very indifferent manner, and often, too, when the ground is entirely too wet on the surface and not to a sufficient depth. Often the land is cold and unfit to receive the seed sown, and more generally not plowed more than two and a half to three inches deep, and at this season of the year the crows and birds are very troublesome and get a great amount of seed. The result is a light crop, and not sufficient to reward the laborer for seed, time and money expended.

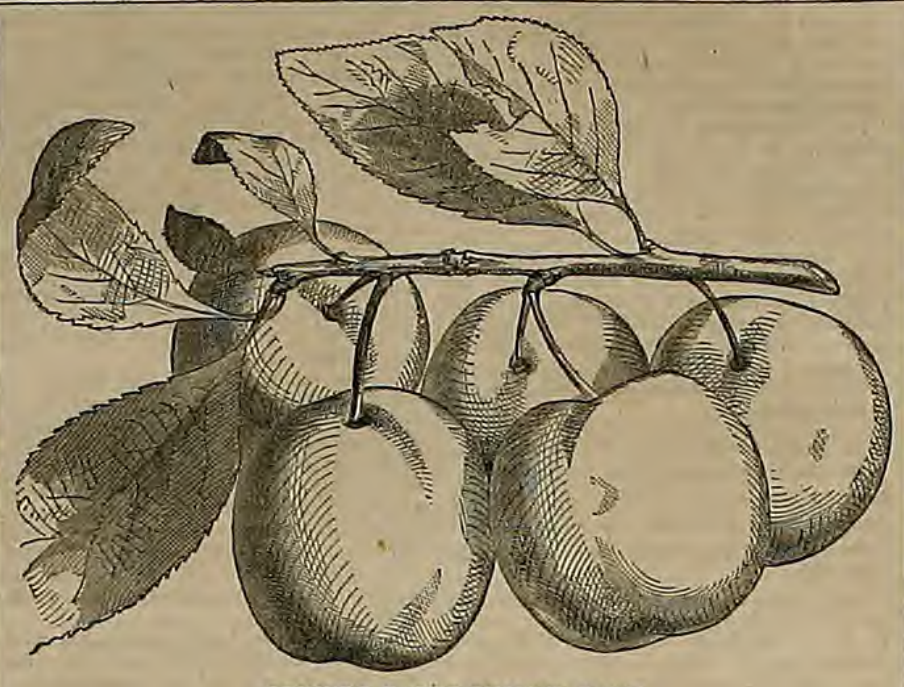
Now let us take another view of this subject. Suppose we all try one acre, if no more; plow in the spring, say this month; get one of Thos. Ogg Shaw's plows, made in San Francisco, large size, say the largest size; put to it three or four yokes of oxen, and plow from twelve to fourteen inches deep; two to three pairs of horses will do as well; and then sow seventy-five pounds of good clean seed in the month of September next; use a cultivator to cover with, or harrow well, then use a heavy roller to smooth down with, which will put the ground in a good condition to harvest and prevent the birds from getting much of the seed, also it will endure more drought; as also it does not take as much seed to sow early as when sown late, for the first rains are generally warm, the grain readily comes up and is not liable to suffer for want of rain during winter.

Now, friend farmers, if you will make the trial this once, and find me in error, you may publish my name to the wide world as a quack, and writing what I do not know to be a fact. And if any of you think I have not made reasonable statements, please call on me at my ranch, and I think the vail may be removed from your eyes. Last season I began to plow for fallow on the 10th day of January, and continued until the dry season forbade plowing. In the month of September I commenced sowing my fallow grounds. The first piece was sown in Barley; on the first day of this month the heads began to put forth, and notwithstanding for the last six weeks we have had only one light shower, the promise is good for a crop, and a good crop. On the first days of October I began to plant wheat, this also bids fair for a good crop; and all the lands that I plowed in the fall, and some of them sown on the same day that some of the fallow ground was, do not bid as fair for a crop, not being more than half the growth.

Here let me state that this fallow land was plowed from six to eight inches in depth. This season I obtained at the State Fair, from T. Ogg Shaw, one of his largest sized steel plows, fourteen-inch cut. It is also a deep tiller; I use with it a team of four horses, and when the ground is sufficiently wet plow thirteen to fourteen inches deep. If any doubt this, please call, and I will satisfy you on this point. In addition to this I have used a subsoil to some extent, and put that down thirteen inches below the bottom of the plow. And I am satisfied from actual experiment, we cannot till too deep. The deeper we till the more rain the land will endure and withstand the greater drought. Yet I wish to be distinctly understood, that although we may plow early, sow soon, plant good seed, and on good ground, yet if we have no fence or that which is not good or good for nothing, but to make breachy stock, our labors will be in vain.

More anon. I. D. MORLEY.

THE following is a statement of the affairs of the U. S. Branch Mint in this city, from the 1st to the 18th inst: Deposits—Gold, ounces, 72,004 69; value of same, about $1,296,000. Coinage—Gold, Double Eagles, $1,140,000; Silver, Half Dollars, $8,000.



PRINCE'S LARGE YELLOW GAGE.

WE present this week a cut of the above splendid fruit, that fruit-growers may have the true figure and description of it, and thus be able to distinguish it from the Green Gage, which it is often (very erroneously) called, the Green Gage being different in form, size, and color. We copy Downing's history and character of the above Plum as *the* history that is reliable:

YELLOW GAGE, PRINCE'S. P. Man.

American Yellow Gage (of some). White Gage (of some).

The Yellow Gage was raised, so long ago as the year 1783, by the elder Mr. Prince, of Flushing, L. I. It is very common on the Hudson river, but we do not find any description of it in Manning or Kenrick. We have noticed that it is sometimes confounded, at Boston, with the Imperial Gage, which is really quite distinct. Its great hardiness and productiveness, joined to its rich sugary flavor, make it a favorite sort.

Branches smooth, short-jointed, with glossy leaves, and forming a large spreading head. Fruit a little above medium size, oval, rather broadest towards the stalk. Suture a mere line. Skin golden yellow, a little clouded, and covered with a copious white bloom. Stalk an inch long, inserted in a small round cavity. Flesh deep yellow, rich, sugary and melting, though sometimes rather dry; parts freely from the stone. Ripens rather early, about the first week in August.

The growth of this plum is not only very different from the Imperial Gage, but the fruit of the latter is readily distinguished by its abundant *juiciness*, its greenish color, and the superior sprightliness of its flavor.

Triumphant Experiment.

THE trial of Willard's Patent Seed-Sower and Harrowing Machine was made, on Tuesday last, at Oakland, on the land of W. F. Boardman, Esq., in the presence of several gentlemen, practical cultivators, and mechanics also, and we are most happy to give the following brief report of the operations of the implement, and to which those present have been pleased to give their approval by the following

Report of the trial of the Patent Seed-Sower and Harrow, known as Willard's Patent, now just introduced into California by Dr. H. Hewitt, the owner of the patent right for California and Oregon.

WE the undersigned, having been invited to attend the first trial of the Patent Seed-Sower and Harrow named above, cheerfully bear our testimony to what we have witnessed, believing it to be the most successful experiment ever made in California with an implement of this character.

The first trial was upon a piece of rough ground of about half an acre, which was to be planted with wheat. The implement being entirely new, just landed from the ship, no opportunity had been given to put it in perfect working order; yet so excellent was its operation, that all present were more than satisfied at the completeness of the work.

This implement is constructed similar to many large seed-sowers upon wheels, with this exception: the seed-box is a round zinc cylinder, having rows of triangular holes, which can be gauged to sow any number of pounds per acre required. Below the grain cylinder is a smaller one for grass-seeds, so that fields of grain and grass can be sown at the same time. Below these, supported by flanges, are two sets of rollers, having wrought-iron teeth of six inches long, which are screwed in. These rollers having separate action, relieve the strain on the machine. These rollers and teeth are the harrow, which is made to revolve by means of a chain passing over a grooved iron wheel, inside the main wheel, then crossing and passing over the groove also upon the rollers, reversing the motion of the harrow, and thus, by a direct front action, and a rapid pressure upon the soil and the lumps of earth, completely pulverizing them. We should mention that the driver sits in an iron chair upon the machine, where, with perfect ease, he can guide and control every part of the implement.

By this first experiment we noticed the grain was very evenly sowed, and most admirably harrowed in, leaving original rough, lumpy land, smooth and pleasant to the eye.

A second trial was made in sowing barley, upon a piece of black adobe land that had been plowed several days, and was in large hard lumps, many larger than a man's head. A portion of this ground was sowed; and we cannot but express our satisfaction at the wonderful manner in which the hard lumps were crushed, and the rapidity and ease with which it was done, thus sowing the grain even and crushing the lumps of earth in a way that any other machine would fail to do.

A third experiment was made in harrowing a piece of land over the second time, to show the power of this harrow to crush and pulverize the hard adobé land so common to California, and which all former efforts, by any kind of machinery, have always failed to do. In this trial a piece of the same lumpy adobé land was taken. All present examined the lumps, and we could not believe it possible they could be broken by a harrow; but the first time passing over, broke and crushed the greater portion of them; the second time completely crushed them, leaving the soil as smooth and even as a portion of our vegetable gardens; and this, too, by the side of the same soil, on the same lot, of the same plowing, where a heavy harrow, with an extra weight of 200 pounds, had been tried three, four, and six times over, without effect. This result was most complete, and gave us all very great satisfaction.

Another grand feature of this excellent implement was, the complete and entire destruction to the weeds, grass, &c., upon the land; the harrow tears and tosses them over and over, separates them from the soil, and throws them back upon the land as if they had been shaken out by hand; and in not a single instance did the harrow clog or become impeded in its progress by weeds or lumps of earth, but performed its work to the admiration of all present, and we feel called upon to express our decided and warm approbation, and to recommend this admirable implement as worthy the attention of all the friends of agriculture on the Pacific coast.

J. BIDWELL, of Chico;
CALEB S. HOBBS, of Hobbs, Gilmore & Co.;
WILLIAM S. GREEN, of Colusa;
C. W. DRURY, of T. Ogg Shaw's works;
HENRY GERKE, of Lassen Ranch, Deer Creek;
E. E. BOICE, of Oakland;
C. L. NORTH, "
And others.

Having been invited to be present to witness the trial, to all the above we give our hearty approval and earnest sanction.

We should not omit to mention that refreshments were politely provided for the hungry at the house of Mr. Boardman.—[Editor Farmer.

RESULTS.

The trial proved the following facts:

1. The perfect adaptedness of the grain-sowing cylinders to the *equal* and *even* distribution of the seed.

2. The revolving harrow proved to be equal to the complete pulverization of every kind of soil, from the sandy loam to the hitherto intractable adobé, dried baked lumps of which, on being thrown before the cylinder harrow, were instantly pulverized.

3. The power to operate the machine is no greater than that required for the common harrow, viz., one pair of farm horses.

4. The sods, whether of grass or weeds, are completely broken up, and the latter entirely freed from earth, thrown behind the harrow and left on the surface.

5. Its revolving motion keeps it free from the adhesive adobé soil, as well as from stubble and roots; these latter are thrown behind and left on the surface.

GRAND SUCCESS OF AMBROTYPING.—A case of interest was made known to us a few days since, where a trial of a peculiar kind was made of the durability of one of the ambrotypes of Vance. A lady and gentleman who were passengers on a vessel wrecked on the coast of Mexico, having barely escaped a watery grave, had their trunks washed ashore after the vessel went to pieces. In one of the trunks was an ambrotype of an only son, which they had procured just before leaving San Francisco. Some of the trunks were broken open, and their valuables strewn along shore in a worthless condition. They sought for the valuable remembrancer, but hardly dared hope to find it bearing any likeness, as it had been in the salt water two days; but judge of their surprise and joy when finding it, although the case was so saturated as to drop off, *the likeness was perfect and the picture uninjured.* It was brought back to this city to be now framed. This picture is a proof of the success of this art as practised by the artist who made it. It can be seen at Vance's gallery as it came. The vessel wrecked was the schooner Roscoe, that went ashore during a gale at Ventosa, the port of Tehauntepec, last April. As an act of justice to a deserving artist, we make known these facts as they were communicated to us by our friends, who have just returned.

SWEET POTATOES, GOPHERS, ETC.—In the communication published last week, relative to the Carolina potato, the writer intended to say that the business of importing and growing them was conducted by Rumford & Brother, instead of himself alone. They also desire us to state that they find sirup is better than gum arabic, to mix with strychnine, when applied to vegetables for the destruction of gophers. We desire most earnestly to receive all such facts from practical men, that we may spread them before the people.

The Seed, the Stock, and the Graft.

By Wm. Mundie, Landscape Gardener, Hamilton, C. W.

There are very few people to whom a portion of good fruit is not both grateful and beautiful, if partaken of with propriety; and there can be but very few, who are in any way engaged in the cultivation of the soil, but will have an interested as well as a pleasurable desire to grow some one or more of the fruits which thrive in our climate.

Fruit also forms (or should form) a very considerable staple in every market; and while its cultivation gives remunerative employment to the growers, it also forms one of the best and healthful of exercises for the amateur. From thus viewing the importance of good and productive fruit-trees to the country generally, I have been led to write the few following remarks, which, if but pointing in the right direction, may be beneficial in drawing attention to the subject.

The propagation and raising of the various sorts of fruit-trees for the stocking of orchards and fruit gardens, is a business of considerable magnitude, and there are few businesses regarding which so much trust has to be exercised by the customer as with the tree-grower or nurseryman. A considerable time is required to prove what he has got, and seeing that the price of the trees is not the one-hundredth part of the loss should disappointment ensue.

In the earlier settlement of this country, orchards (as many evidences yet existing testify) had been mostly raised from seeds of the various fruits intended to be grown; many varieties of fruit were thus raised. Indeed, scarcely are there to be found two trees with fruit alike in the older orchards which had been thus raised; yet mostly all were of an inferior quality. Now and then, a tolerably good fruit would be got arising, probably, from having been cross or hybrid bred between two pure, or nearly pure, original (but different) sorts, the properties of which in combination were fitted to form a right consistency for a good fruit; but this was chance.

A little later, grafted and budded trees had been introduced—that is, trees grafted or budded with cions or buds (from any good sort that it might be wished to increase) upon a young seedling tree or stock. This process, which is now well understood, most admirably answers the purpose of propagating and multiplying good varieties, with the certainty that they will be identically the same sorts as the parent trees from which the cions or shoots were taken. In respect to general principles of working, this process is complete; but I consider that much has to be learned and observed before we have the full benefit of its very adaptable qualities for increasing and preserving our fruits pure and productive.

In all well regulated nurseries, the different sorts of trees are marked with either names or numbers on the ground where they stand, and, generally speaking, very great care is taken to have the kinds true to the names given with them; and, except from any accidental mistake (which, under the best regulations, will sometimes occur), many, I believe, are worthy of every confidence. But then, these names and numbers only speak truth as to the sorts from which the grafts were taken.

Now, without attributing other defects than those of the present routine of practice, and, of course, a desire on the part of nurserymen and tree growers to raise as large a quantity at as cheap a rate, and in as short a time as possible, I consider that there is a very great oversight in the present mode of propagating and raising fruit-trees, and which, in my opinion, lies in the indiscriminate way in which the stocks (or seedling trees to graft upon) are raised and used. For instance, in the case of apples, if a cider-mill is near, a quantity of seeds is very readily obtained; but such seeds are probably from fifty or one hundred varieties, most of them having pedigrees, connections, relations, differences, and affinities to others, and to and from each other, inextricable beyond all calculation. They are sown and grown, of course, indiscriminately, and the further probability is, that many of them may be already hybridized with, and allied to, the sorts which will be grafted or budded on them, and presuming that the stock exercises a most decided influence on the graft, and also on the quality of the fruit, but, more especially, on the health and productiveness or unproductiveness of the trees, and that, notwithstanding the goodness or productive quality of the sort which may have been grafted from, such indiscriminate amalgamation as this must be detrimental and deteriorating.

Some practical nurserymen say, that by the root-grafting system, the unsuitableness of stocks to grafts is done away with, from the graft itself rooting into the soil. I am of a different opinion, because I think that the rooting of the graft rather aggravates the difficulty than otherwise, as, then, there will be two distinct sources through which the tree will be supplied with sap, the amalgamation of which may be very injurious to either health, growth, productiveness, or quality. With other fruits which come under the process of budding or grafting (as with the apple), the procedure has been pretty much the same, and need not be enlarged on.

The pear, when budded on the quince stock, has shown us some lessons in the direction aimed at in the foregoing, as many sorts of the pear do not succeed on quince stocks, which, on pear stocks, are thrifty, and good bearers. This can only be attributed to the influence of a stock which is not fitted for them. In other sorts, failures occur on pear roots, but, no doubt, from a similar cause.

By great attention and care in the proper hybridizing and crossing of the different sorts, the French and German growers have succeeded in raising many new seedling varieties, possessing first-rate qualities while on their own roots pure, or when grafted upon suitable stocks, but which also get much deteriorated by being grafted on unsuitable stocks. Many good American seedlings have lately appeared, which, if thus indiscriminately matched in grafting, must share the same fate.

By gathering seeds which may have been hybridized by insects, or in any other promiscuous manner, some good pears may be raised, but only by the merest chance; and the chances against it are manifold.

By a like hypothesis, I have been led to believe that the indiscriminate manner in which seedling stocks are raised, reduces the productiveness, the size, the flavor, and also, in a very great degree, the constitutional health and vigor (or hardiness) of many of our fruit trees, to be, in a great measure, a matter of chance, dependent as to whether any particular sorts of grafts may happen to have been put upon stocks suited to them; and I suppose there will be but very few who will think otherwise than that their chance of being so placed would be but very slender indeed.

Nurserymen and fruit-growers certainly deserve well for having introduced many fine sorts of fruit into the country; whether for self-interest or philanthropy, matters not, as, in either case, the country is benefited. The progress made in propagating has also been great, but, by reason of those oversights which I have been endeavoring to point out, I think we have been (and are yet) working greatly in the dark, and making success more a matter of chance than it otherwise might be.

As a commencement to improvement, the adaptation of properly bred stocks to the various sorts which it may be wished to grow, might be the first aim; and, in my opinion, the nearer thorough-bred (borrowing a term), or bred as nearly as possible in a direct and pure line from the crab-apple, pear, or plum, etc., so much the more likely are we to have success in producing healthy, hardy trees, and clean, handsome, and high-flavored fruit. This one branch of the improvement is of itself a great work, and must also be a work of time and experience; but the importance of such a work ought to be sufficient to enlist the united efforts and energies of all who are interested in fruit-growing, and who is not?

I have not written the foregoing remarks as pretending to impart any definite information on the subject (in detail), as neither time nor opportunity has been had in order to experiment for that purpose, and the subject is of too much importance for random conclusions. I have only endeavored to point out a problem, the working out of which is of great interest, but which, if properly taken up by nurserymen and horticulturists, may be solved to much advantage, and which, I have every reason to believe, will account for many of the discrepancies and difficulties hitherto experienced with fruit and in fruit growing.

New Product—Chufas, or Earth Almonds.

We give the following notice of this new product which we find in the Ohio Cultivator, with the hope that if any of this species of roots have found their way into our country, we may hear from them:

Some wise man, in an Eastern publication, has tried to make himself merry at the expense of Mr. Lum of Sandusky, in regard to Chufas, contending that it is identical with a certain wild grass, which is a great pest when it gets a foothold; and proposing, or, at least, mildly suggesting a reference to lynch law, as a punishment for unfortunate Mr. Lum. I had procured some seed myself from Mr. Lum, and saw at once the egregious error of the Hotspur, and felt an inkling to take up a lance for the side of truth; when, very opportunely, appeared a more able correction from the Patent Office, whence the seed originated. And I perceive they are so well convinced of the value of the Chufas, as to have ordered 100 bushels for distribution.

As few appear acquainted with this new product, I am inclined to give my experience with it, partly to give and partly to acquire information. The seed is a little tuber about three-fourths of an inch in length, and tastes richer and sweeter than a chestnut; the stalks that grow from it look like a rank grass, and, it is said, make good hay. Of this I was not aware in time, and put mine on the compost heap.

I planted but 100 tubers in rows, the seeds about ten inches apart. The yield, both of tubers and stalks, was most astonishing; of the former I gathered near half a bushel, leaving quite a quantity in the ground, and the rows presented a thick mass of stalks from end to end, it seems to me at least 100 stalks to each tuber planted, the spires being about two feet high, and falling over gracefully.

But now let me suggest a hint, which might also be useful as applied to other things. By way of experiment, I divided my seed, and planted in two kinds of soil—the one a sandy loam, inclined to wet, and the other a friable clay, both well-manured. The appearance and product of the two pieces were the same; but the quality—how different! On the clay the nut was rich and particularly sweet, on the sand it was rank, more woody, and not near so sweet. It is said, however, that the Chufa loves sandy land, even quite poor, and I attribute my failure as above to too much wet. (That wet spot has just had a good stone underdrain presented to it.)

Much might be speculated here as to the different experiences and opinions of men on the same thing in agricultural matters, owing to certain causes at work, not brought into the account, because not seen.

Singular Method of Finding Drowned Persons.—The London papers relate that an agricultural laborer, named Solomon Doford, was drowned at West Cowes, Isle of Wight. A "novel process" was used for the recovery of the body by one of the coast guards. He assured the bystanders "that if the party was drowned in the neighborhood he would discover the body by means of a new loaf of bread, in which should be deposited three ounces of quicksilver, when the loaf would float till it rested over where the body might lay." However extraordinary it may appear, the experiment was tried, and on the loaf becoming stationary, a boathook was put overboard beneath it, and brought up the body. The man states that this is the fourth instance in which the experiment has been tried by him with success.

Vinegar.—The juice of one bushel of sugar beets, worth twenty-five cents, and which any farmer can raise with little cost, will make from five to six gallons of vinegar equal to the best elder wine. First wash and grate the beets, and express the juice in a cheese press, or in any other way which a little ingenuity can suggest, and put the liquor into a barrel, cover the bung with gauze and set it in the sun, and in fifteen or twenty days it will be fit for use. By this method the very best of vinegar may be obtained without any great trouble, and I hope all who like good vinegar will try it.—[Ex.

Rules for Growing Old.—I am now an old man. I have seen nearly a century. Do you want to know how to grow old slowly and happily? Let me tell you. Always eat slowly; masticate well. Go to your food, to your rest, to your occupations smiling. Keep a good nature and a soft temper everywhere. Never give way to anger. A violent temper of passion tears down the constitution more than the typhus fever. Cultivate a good memory, and to do this you must always be communicative; repeat what you have read; talk about it. Dr. Johnson's great memory was owing to his communicativeness. You, young men, who are just leaving college, let me advise you to choose a profession in which you can exercise your talent the best, and at the same time be honest. The best profession is the ministry of the Gospel. If you have not talents to be a minister, be a lawyer, but be an honest lawyer.—[Rev. Daniel Webster.

The Farmer, Manufacturer and Merchant.

The following wise counsel we find in the Wool-grower's Report, published by A. Meader, Esq., Cleveland, Ohio. Let but such sentiments as these be inculcated into the minds of our people, and we are safe:

Times like the present should lead the Merchant and Manufacturer to reflection. It is a fruitful time for thought. Events beyond their control, have in many instances, divested them of every dollar they could have called their own three months ago.

Adversity should not deter; misfortune should not discourage; misplaced confidence should not paralyze your efforts; you are engaged in a worthy calling. Rise above the embarassments which, perhaps, in forecast you could have avoided, and the lesson so suddenly and severely taught, will prepare you to cope more successfully with whatever of adversity may beset your future path. We would caution you not to yield to the adverse circumstances which surround you. Let *manliness* govern your actions, and you will soon rise above and swing clear of all the shoals which now obstruct your course.

Yield not your places to the inexperienced and incompetent. Pursue the onward course with steady head and hand, and success must ultimately crown your efforts.

We would also extend the same caution and advice to the Farmer. Let no tempting prospect induce him for a moment to think of abandoning his pursuit. What profession or pursuit so independent as the farmer's? Who so happy as the farmer may be?

To the thousand young men who are constantly crowding our cities in pursuit of a calling which they foolishly regard more honorable, we would say, remain where you are, as tillers of the soil, and if you do not make many thousands in a year, you will if industrious, be sure of steady accumulations, and rest assured that a panic or revulsion will not sweep away in one day, the avails of years of labor, and what is more important, you will lead a better and a happier life, and your days of usefulness will be prolonged.

A change in the foreign or domestic market entirely beyond their control, may render bankrupt the merchant and the manufacturer, although they have done everything which energy and industry could do to insure success.

But what has the intelligent farmer to fear? His capital is invested in the solid earth. He draws on a fund which has never wholly suspended or repudiated; his success depends on no earthly guarantee, but on the assurance of that great and beneficent Being who has declared that whilst earth endures, seed time and harvest shall never fail.

The Palma-Christa, or Castor-Oil Bean.

This plant, of which but little use has been made, excepting for the oil, is being brought into use in Europe for various other purposes, and made to bear an increased value. Whatever may be its product in other States, or however large and luxuriant the plant may grow elsewhere, California can beat the world in growing this valuable plant. We have seen plants growing in avenues, like trees, measuring fifteen and eighteen feet high, and the size of a man's arm in diameter, loaded with large cones, 12, 18, and 24 inches long, each tree yielding large quantities of the bean.

M. Bervis, a French chemist, says, in Hunt's Merchants' Magazine:

"By distilling castor-oil upon concentrated potash, the sebacic acid and caprylic alcohol are extracted as separate products, which may be turned to a good account. The sebacic acid having a high melting point, may be employed, instead of stearic acid, in the manufacture of candles, and if it be mixed with stearic acid, the hardness and quality of the candles are greatly improved, and in appearance they resemble porcelain. It is possible to use caprylic alcohol in all the purposes to which ordinary alcohol is put, particularly in illumination, and in the composition of varnishes, and from it certain other compounds may be derived, of remarkable odor, similar to those which are at present largely used in commerce."

The French people expect that this discovery will prove of great advantage to the farmers in Algeria, since they can produce from a given quantity of land three times as much castor-oil as they can olive-oil, and twice as much as of palm-oil, both of which productions afford good compensation to the cultivator. Shall we not make it equally profitable in this country?

We hope more attention will be given to this plant, in California, the present year.

Granulation of Butter.—The clipper ship Neptune's Car, which arrived in this port lately, has discharged a large quantity of butter. This article is said to come out in uncommon fine condition, notwithstanding the ship was obliged to go into Rio on her way out, she having sprung a leak, where she was detained a considerable length of time. Much of the butter heretofore imported to this market has become granulated on the passage, a condition generally attributed to the heat of the climates through which it had passed. But the fact of the Neptune's Car having been detained for so long a period within the tropics, and this part of her cargo suffering no detriment, has led some of our merchants to think this granulation of butter is produced by other agents than heat, as for instance by the effluvia of guano, from the effects of which the hold of a vessel can never be entirely freed by any purifying process yet discovered. As this is a problem of some importance to the mercantile community, it would be well the matter were thoroughly investigated. Facts sufficient to establish or dissipate the theory suggested could easily be arrived at. [Times.

The Best Inheritance.—In ability to help one's self, manly principles, and a good constitution. Infinitely more valuable are these than beauty, birth, or blood. Beside them, wealth and fame, and position, pale away in darkness, when they have come down from father to son; because they may be lost, and are ignobly lost in countless instances. But with these—health, manliness, and self-sustaining power—wealth is created, a name may be founded as lasting as that of the Cæsars, and a standing among men secured of more honorable mention than the coffers of all kings could purchase.

These things being true, the wiser policy of parents is, not to work themselves to death, in order to leave their children perishable thousands; but, by judicious teachings from infancy, show those children how to take care of their health, and how to make a living for themselves.

Theatricals.—No. 1.

[We shall present from time to time a series of familiar letters upon the Drama and those who personate the Drama. The design is not to enter into any elaborate criticisms, but to present the subject in an interesting manner, so as to awaken attention, and with the hope of doing good. We ask attention of our readers to our new correspondent, who will take up this theme, as one familiar with the subject, and who will hereafter give a more particular attention, as one who knows "Queen Bess."]

Hearing so much of Mrs. Wood's popularity at the Bay—her grace and beauty—I thought I would visit the Theatre, and judge for myself. The performance commenced with "The Little Treasure," in which Miss Grattan and Mr. Courtaine played the principal characters. Miss Grattan is passably fair, with considerable sprightliness and grace; and dresses very neatly. Mr. Courtaine played Walter as if for the first time in his life; he was dressed in a good suit, his gestures were very awkward. Walter is a modest and timid man, yet he is a gentleman. But for Mrs. Middleton, her style of dress for the old lady was perfect. The tones of her voice as she addressed her granddaughter were so perfectly natural, that you almost forgot you was looking at a play, and shows her to be mistress of her profession. She has more genius and greater conception of character than any lady who has ever played on the Pacific side. She wears her age nobly; but were she ten years younger, she might rival Julia Dean, Miss Heron, Mrs. Baker, and Miss Ince, and their stars would shine but dimly by the side of their competitor. Mrs. Judah was the feature of the "Little Treasure;" with the exception of her and Miss Grattan, the piece was played badly; it was imperfect—and painful to hear the prompter.

The afterpiece, "Hiawatha," commenced with a chorus of several German singers. The singing was very good. I also noticed the sweet voice of Mr. Barker, who sung a solo in good taste. He has a rich, mellow voice, and it is a pleasure to hear him sing. The second scene brought Mrs. Wood on the stage, the star of the evening. How shall I describe her? She is certainly a very pretty woman, with large, black, soul-speaking eyes, a fine brow, a beautiful snowy neck, and finely proportioned form. She has an abandon of action which speaks of her being perfectly self-possessed on the stage. When she speaks, her voice is rich and melodious. She sings well; and acts and sings with a great deal of energy. She may not be aware of it, but she has all the elements of a tragic actress—voice, gesture, and full of soul and impulse. Her mad scene, had she been playing Belvidere (as some of the words in "Hiawatha" were borrowed from that play), would have been terribly grand. She has mistaken her *forte*. I would like to see her play Bianca, in Fazio. I believe she would give such a rendition of the character that has never been seen since the days of Fanny Kemble. She plays burlesque well, but it is a desecration to her tragic talents, which I am confident the lady possesses. She has a soul-thrilling voice, and can never do justice to herself till she enters the higher walks of the Drama. The Sacramentans expressed their approbation by calling Minne-ha-ha and Hiawatha before the curtain; but there were no bouquets came to the feet of the fair lady, which they should have done by courtesy.

More next week. Queen Bess.

Care of the Eyes.—Crawford, the celebrated sculptor, had an inveterate habit of reading in a reclining position; one eye has been taken out in consequence of a cancerous tumor forming behind it, and his life has paid the forfeit, after years of suffering, and the expenditure of a large amount of money.

Prescott, the historian, in consequence of a disorder of a nerve, by which the eyes were rendered useless for all writing purposes, could not use a pen, as he was unable to see when it failed to make a mark for want of ink; nor could he distinguish the lines or edges of his paper; yet, with these disadvantages, he wrote all his *historicals*, using an agate stylus on carbonated paper, being guided as to the lines or edges by brass wires drawn through a woolen frame; but, with all these hindrances, he has made himself one of the most readable of modern historians, and earned a fortune besides.

To avoid these and similar calamities, we urge upon the young, especially, never to use the eyes by any artificial light, where nicety of sight is required, nor to use them in any strained position, or while riding in rail-cars or carriages.

We urge upon all parents, in view of the many incurable eye diseases, to caution their children against reading by twilight, that is, not before sunrise nor after sunset. It would be greatly better not to allow them to read or sew by any artificial light; but if that is unavoidable, let it be imperative they cease by nine o'clock at night in Summer, and by ten at furthest, in the Winter. It is a most inexcusable folly, and will, sooner or later, bring its punishment, to read or sew by gas, or lamp, or candle light, and then sleep after daylight next morning, as a habit. To persons of all ages it is a most injurious practice.

A Good 'Un.—We heard, the other day, a capital anecdote of a witty clergyman of this city, who is said never to come off second best in a jocular encounter: As one day he was passing down one of the streets of a large village in this State, where he was settled, he was observed by some waggish hangers-on at a public house which he was approaching. One of these fellows, knowing that the reverend gentleman was a "hard case" at a joke, said that he would bet the drinks for all hands that he could head Mr. H. "Done," was the response from a number. As Mr. H. came opposite the merry group, the proposer of the bet called to him. Mr. H. halted and drew near, whereupon the confident chap thus addressed him: "Mr. H., we have a dispute here of some importance, which we have agreed to leave to you as one competent to give a correct decision." "Ah! what is it?" "It is in relation to the age of the devil; will you tell us how old he is?" "Gentlemen," said the imperturable minister, "how can you presume me to be acquainted with matters of that sort? *You must keep your own family records!*" The minister went about his business, and the vanquished gentlemen went in and treated freely.—[Nashua Oasis.

A rural poet in describing his lady-love, says: "She is as graceful as a water-lily, while her breath smells like an armful of clover." His case is certainly approaching a crisis.

FARM STOCK, ETC.

French Merino Sheep.

HAVING been engaged in importing and breeding FRENCH MERINO SHEEP for several years past, I can now furnish Rams and Ewes, either imported, or raised by myself from imported stock, equal to any that can be found in this country or Europe.

I was awarded all the prizes on French Merino Sheep at our last State Fair; and all the premiums awarded to this class of Sheep at our last National Fair, and the most of those at the State Fairs of California, Michigan, Indiana, Missouri, Wisconsin, and also at the Provincial Show of Upper Canada, for the present year, were awarded either to Sheep raised by myself, or to stock from Sheep raised by me, and sold to others.

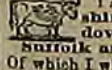
Circulars, giving a full description of my flock, sent by mail to all applicants. Information can also be obtained of the Editors of the California Farmer.

Prices as low as the *same quality* can be purchased of any other person, and Sheep delivered in New York, free of charge. JOHN D. PATTERSON,

WESTFIELD, Chautauque County, NEW YORK.

v8 24 1y *6m

FARMERS OF CALIFORNIA!



I AM Breeding Thorough-bred **Ayrshire Cattle; Merino, Southdown, and Cotswold Sheep; Suffolk and Chester White Hogs,**

Of which I will sell and deliver per steamer in Cincinnati, at the following prices:

AYRSHIRE CATTLE	$75 to $200 each
MERINO SHEEP	$15 to $30 "
SOUTHDOWN do	$20 to $50 "
COTSWOLD do	$20 to $50 "
SUFFOLK PIGS, ₱ pair	$25 to $40
CHESTER WHITE PIGS, ₱ pair	$30 to $50

☞ All Orders promptly attended to, and Hogs and Sheep securely boxed. Cattle, all appendages provided, and delivered in Cincinnati *free of freight and charges.*

Address, H. T. WOLLARD,
v8-21-1y Castine, Darke Co., Ohio.

CHOICE STOCK!

SOUTHDOWN BUCK

"LOGAN,"

One year old; bred from Stock imported by L. G. Morris, Esq. Price.....$50

JIM DALLAH,

THREE-YEAR OLD STALLION,

Brown; 15 hands, 1 inch high; sired by Bay Abdallah; he sired by old Abdallah; he by Mambrino; he by Old Messenger; he by American Eclipse. His grandam, on the sire side, Standard; he by old Sir Solomon; his gr. gr. grandam by old Revenge.

JIM DALLAH'S dam was got by Clarion; he by Monmout; he by Eclipse. Price.....$800.

Address JOHN R. SICKLES,
Monmouth, New Jersey.
Or Editors California Farmer. 9v4 3m

WEBB, SOUTHDOWN SHEEP.

HAVING RAISED MY FLOCK OF PURE WEBB SHEEP (by importations, and purchase of Col. L. G. Morris), to as large a number, as my land will accommodate, I now offer a few EWES, and several BUCKS, for sale, at from $40, to $100 each.

I believe mine to be the only flock of pure Webb Sheep in America, and am confident, that no other person can sell as fine quality, at as reasonable prices.

Also for sale BERKSHIRE and ESSEX PIGS, of the best blood, from Col. Morris' importations.

For further information—address,
J. C. TAYLOR,

OIL!

FOR QUARTZ MILLS.

STANFORD BROTHERS,

PACIFIC OIL AND CAMPHENE WORKS,

Invite attention to the following Certificates from Grass Valley:

New-England Quartz Lead, Dec. 23, 1857.

W. Loutzenheiser, Agent of Stanford Brothers, Pacific Oil and Camphene Works:

Dear Sir: I have now given those Oils from Stanford Brothers, which I purchased from you, a fair trial, and find them the VERY BEST I have ever used.

Z. WHEELER, Superintendent.

Alison Ranch, Dec. 25, 1857.

This is to certify, that we have been using the Oils from Stanford Brothers Pacific Oil and Camphene works, for a long time, and find them of a superior quality.

JOHN ANDERSON, First Engineer.

Alta Hill, Jan. 12, 1858.

I hereby certify, that we are now using on our Machinery, Oils manufactured by Stanford Brothers' Pacific Oil and Camphene works, purchased at their Agency in Grass Valley, and have no hesitation in saying I believe them to be superior to any other manufactured in the State.

L. CARLSSEN, Sup't Alta Mining Co. No. 2.

The SPERM OIL furnished to these Mills is worthy the particular attention of ALL who use OIL for lubricating purposes.

Proprietors of Sawmills, Gristmills, Steamboats, and other Machinery, throughout the State, supplied in quantities to suit, and quality guaranteed in all cases.

Miscellany.

A VOICE FROM THE SPIRIT LAND.

How many a spirit born to blest,
Hath sunk beneath a withering name;
Whom but a day or hour's success
Have wafted to eternal fame.

As exhalations as they burst
From the warm earth, if chilled at first;
If checked from soaring from the plain,
Darken to fog and sink again.

'Twas not for him whose spirit cast
In the bright mold of ages past;
Whose melancholy spirit fed
With the bright glories of the dead.

But if they once triumphant spread,
And soar above the mountain's head,
Become enthroned in upper air,
They turn to sun-bright glories there.

A Series of
Musical Entertainments,
Given to the Contributors of the California Farmer.

BY M. A. SARLES,

Professor of Music and Elocution, in the Collegiate Institute at Benicia.

LECTURE THIRD.

PROGRAMME—PART I.

1. "Il Puritani".....Varly Hertz
2. "Still so Gently." Tenor Aria.....La Sonnambula.
3. "Where are now the hopes I cherished?".....La Norma.
4. The mast bow'd down.....Balfe.
5. What is the Spell.....Amalie.

PART II.

1. The Ivy Green.....Russell.
2. Lucretia Borgia Var.
3. "Ah, Nanny will thou gang with me?"
4. Pilgrim Fathers.
5. "Annie Laurie."

PART III.

1. Susquehanna Raftsman.
2. "Does your mother know you're out?"
3. Bould Zoger Boy.....Lover.

Wherever we allow our wandering inclinations to lead us, either by the borders of the mighty Pacific, upon the beach of the sublime Atlantic, or in the gurgling murmers of the gloriously blue waters of the sunny Mediterranean—in the shadow of the Banyan tree, within gunshot of the icebergs of the Polar seas, or in the sound of Niagara's roar—upon the summit of the highest mountain in the immense Himalaya chain; upon the Rocky Mountains of the New World, or by the gigantic Alps of the Old, there is one feeling common to all hearts, one sensation experienced by every people, and which manifests itself at all times when the proper chords are struck. That feeling, that sensation, is a love for the music of our homes; and when far away from those who are dear to us, those ballads which recall to our memories scenes and associations that are the sunshine of every heart, are dearly prized, and are the only companions whom we can endure in moments of dreary and oppressive sadness.

Poetry, painting and eloquence, because they are not *important* sensations of the heart, can, if necessary, be dispensed with; but Music is so essential to our happiness that it can only be given up with life. It is the angel that is ever conseling us in misfortune—the spirit ever whispering congratulations when we are in the enjoyment of happiness, and is the only ray of earthly light which will be permitted to beam through the gates of Heaven. It is a light which, when purified, is like the beacon in a stormy night, an omen of safety, and a brilliant guide to those who are aweary and astray.

Our songs and ballads are as beautiful flowers scattered along the wayside of life—endowed with a surpassing loveliness, breathing a rich perfume, they attract our notice as we wander by—call forth the latent sparks of emotion, and exercise a master power over our passions, causing us to weep as bitterly as unsophisticated children, or to laugh as merrily as romping school girls. And like the flowers they appeal to our most refined susceptibilities, winning our love by their sweetness, and tempting our notice from the dusty road, the huge stones and gullies that often wreck the careless and indifferent journeyer. Happy are we if the love of the beautiful is implanted in our hearts, for by its power we can conquer many a sorrow, and learn to cherish there sun-bright gems that bloom along the the roadside of life.

The songs and ballads of a nation are the *heart-strings* of a people; they are the one magnetic chain by which can be touched the secret sympathies of the masses; and they are, thank God! the property of no one individual, no one class, no one sect, but are free to all; they are as much the property of the poor as the rich, the educated as the uneducated, and are sung with equal affection in the lowly cabin of the peasant, as in the magnificent palace of the prince. They acknowledge no distinctions, and inspire the mind of the humblest laborer equally with the intellect of the most learned philosopher. They are bound to no particular age, for they tremble upon the lips of an octogenarian as sweetly and exercise as great an influence as if their tones were uttered by the hale and hearty youth in his teens. No clime can change their power, and they are as equally irresistible in the barren wilds of the rude Greenlander as in the sunny vineyards of the warm-blooded Savoyards.

The national influence of ballads is really startling, and gives one food for deep reflection. An English audience, however indiscriminate, become sympathetic and united as they join the chorus of "God save the Queen." A French assemblage fraternise with enthusiasm as they sing the noble strains of a "Marseilles"; and the American people forget all but their love of country when they hear "Yankee Doodle" and "Hail Columbia." And infinitely more patriotic and soul-stirring were the hymns of the Roundheads, than the refrains of the Cavaliers; and hence how much more invincible and successful were they. Why, the chanting of one doxology before a battle, and by such men as were commanded by Oliver Cromwell, would almost insure a victory against any odds; and it is no wonder that his force swept onward like the overwhelming simoon, hurling to destruction all the obstacles which reared themselves in his course.

But it is the home influence of ballads that is peculiarly beautiful and touching, and that appears most beneficial; for those associations that are the sacred relics of the heart cannot be prized too dearly. They are invaluable, for they encourage in us a domestic taste that will enable us to become respected and influential members of society. It is the simple and touching ballad chanted over us when children, by a loved and revered mother, that remains like an amulet bound around us till our course of life has run—that brings back vividly to memory the prayers and supplications of our dear parents—their pure and unselfish love that recalls to our vision our favorite playmates; the blue-eyed, rosy-cheeked girl who kept our mind from our books in school-boy days; the kind friend who always stood by us in all our altercations with rude associates; and as these holy pictures of the morning-time of life appear to the mind, it is prepared for nobler influences than those suggested by the busy world. Thus is it that "Home, sweet home," or "Slumber gently," compels us to stop and think; and if we once allow our thoughts of childhood to steal over us, we are not lost, for they may point with their silent glances to the narrow but sweetly-scented road to eternal happiness. The heart may become cold and indifferent to the world, but it is very rarely that the door of its secret chambers can be kept closed when music echos through its corridors.

If it were not for an united literature and our common ballads, England and the United States, rivals as they are on every field of progress, would never have become so indissolubly connected. Their clashing interests, their difference of thought and feeling would have caused their separation; but fortunately for us both, and fortunately for Mankind, we have two things in common—our literature and our music—and as long as they hold a sway so indisputed, so long will be continued our friendship.

The two feelings that are mainly important in the minds of mankind are friendship and love. They are the sunshine and the moonlight of the heart, and it is to them that we owe all our elevated and all our most beautiful sentiments. It is their presence or absence that renders earth either a garden or a wilderness; and it is not strange therefore that the most popular ballads treat of their twin influences. Generally, the more simple and unaffected the sentiment, and the most faithful to nature, the more successful are they; for any elaborate or affected display of sickly sentimentality is always rebuked with sufficient severity by the cold reception of a feeling public.

The sea, with all its sublime changes and its fascinating and terrible attributes, is a favorite theme with all who love the sister arts. Its calm and glassy bosom, its mountain-like waves, its treacherous smoothness, and its awful wildness, its constantly recurring perils, and its happy sovereigns, are all depicted by our sea songs; and even the most dull and insipid borrow a portion of the grandeur and solemnity of the unmeasured and eternally moving ocean, and its varied and dangerous life.

The hollow-hearted brilliancy and the vain glory of war has, in all ages, dazzled the imagination of the world, and hence many are the ballads that attempt to describe its dangers and its horrors, its pleasures and rewards.

But most impressive are those warning us of death. Solemn language is rendered always most forcible by being coupled with music, and when they are finally moaned forth by some faithful friend, over the narrow home that holds at last our perishable bodies, the spirit will come floating from its aerial home, and echo its sobbing melody in every murmuring of the sighing wind.

The ballads of a country are always characteristic of the sentiments of the people, and give the first impressions to the budding mind of the child; impressions that are erased only by death; for no matter how feeble the mind, no matter how perverted the intellect, they always recur with sanity to the undimmed recollections of a mother's prayers and a mother's lullaby.

It is important then that the strictest inspection should be given to each new candidate for public favor, and if its music and its words convey a beautiful lesson or a commendable sentiment, cherish and foster it, for it is one of the many guide-boards that virtue erects along life's highway.

PART I.

1. "Il Puritani" forms the subject of my first fantasia. This opera unbolts the doors of feeling and fills one's mind with the glowing patriotism and the noble and unrestrained freedom of its sentiments. It heeds not the tyranny of Italy's conquerors, but appeals to the minds of the people, and must have often and often inspired them with much of its enthusiasm. We know certainly that the so called "Liberty Duett" is prohibited on the Italian stage, and likewise in Spain. Hertz's variations are particularly brilliant.

2. I will now give you another selection from Bellini. I have so far selected my operatic gems from this Maestro, because I can particularly commend them to your notice, not only on account of their beauty, but because they are invariably popular in all circles and among all classes of people. The talented Mr. Tuckerman, speaking of this eminent composer, says: "He affects us powerfully, for the reason that Shakspeare or any other universally acknowledged genius excites our sympathies, his music is *true*."

3. This selection is from his "Norma," an opera that has become almost as familiar to us as "Household Words." It is the first of his productions which won for him an undoubted victory. Tuckerman, in speaking of his death says: "Among the Catanese, business was suspended, every voice faltered as it repeated the tidings, every eye was moistened as it marked the badges of mourning. In the capital the same spirit prevailed. There, but a few months previous, the King entered the city and no voice hailed him; the gifted composer came and acclamations welcomed him. Every testimony of private regard and public honor was displayed. His sojourn was a festival, so the news of his death created universal grief. Here, in the spirit of antiquity, an oration was pronounced in the theater, his favorite airs performed, and actors, in the old Sicilian costume, represented the effects of his death by an appropriate piece, with mournful music. In the streets were processions, in the churches masses, and in the heart of every citizen profound regret.

4. Among the most eminent of modern composers is Balfe, whose beautiful melodies have become known almost universally. In London, so great is his popularity that wherever he appears he is considered a lion, and his presence is considered a high honor. His operas contain many choice gems, but are faulty when compared with the works of such composers as Bellini and Donizetti.

5. The opera of Amalie is one of the finest English productions, and has had a brilliant run in England and the United States; but the immense sums that are demanded for engagements by popular singers are of very great injury to the success of such entertainments at present, and until a more moderate compensation is awarded, it will be impossible for us to have the pleasure of hearing, as frequently as we could wish, these admirable productions of genius.

PART II.

1. Henry Russell, the author of the ballad I am about to sing you, is an English Jew of mean extraction, who, by his remarkable genius and his fine voice, attained a high position before English and American audiences. At one time he enjoyed a popularity that was certainly very enviable; but he has gradually fallen in the public estimation, mainly by faults that were displeasing to his friends.

2. "Mary of Argyle" is one of the oldest and most favorably noticed ballads that belong to our time; and has been warbled by the beautiful maidens of England, by the moonlight serenaders, and by the fair girls of our own land, until it is known to almost every person.

3. "Ah, Nanny" is a lovely specimen of the old Scotch ballads; a species of popular music that at one time became all the rage. For delicacy of style and simplicity of harmony, it will very successfully compete with some of the best songs of the present day.

4. Mrs. Hemans never wrote anything more worthy her remarkable talents than this well-known song. Nature has perhaps had more admirers of superior ability, but few who have exhibited such a pure and holy devotion as this authoress. Her poetry is full of its melody, but at times she has evinced a talent for more stirring themes, and in the "Pilgrim Fathers" has succeeded admirably. She was a sincere Christian, as nearly all the enthusiastic admirers of nature have been; and thus it is that she is prized in the hearts of families, where naught but pure and undefiled sentiment is allowed to enter. She was born in 1792, and early exhibited a poetic temperament. She died in Dublin, mourned by the world, but missed particularly by those who had an opportunity of knowing her in private.

5. "Annie Laurie," since the late war of the Allied Powers with Russia, has become one of the national ballads of Scotland. The Highlanders sang it, with tearful eyes, almost every evening; and the brigade who made themselves immortal by their celebrated charge, which Tennyson has so graphically described, chanted it only a few hours before they were aroused in the morning by the bugle. It was a lovely night, and under the soft light of a full moon, even the graveyard fields of the Crimea looked beautiful. The men were in good spirits, but as they talked of home a feeling of sadness seemed to envelop them. They commenced to sing "Annie Laurie," but before the last strain had melted away, the men were in tears. None among them, probably, remembered the old saying: "Coming events cast their shadows before."

PART III.

1. Again we come to the comic portion of our evening's entertainment. Negro minstrelsy is a prevailing taste with the people of the United States; but the ballads when divested of their negroisms, are all beautiful in thought; and their melodies have attained a popularity because they are simple and touch the ordinary feelings of the multitude. Of course the comic songs are, as musical compositions, usually indifferent in all but absurdity, and it is this that renders them laughable. But we eat dessert, not because it is sensible, or because it is important to health, but because it is a change, and consequently has a relish.

2. "Does your mother know you're out" gave rise to that common expression that has become a by-word among our b'hoys.

3. This is one of Lover's ballads, and has become wonderfully popular. It is characteristic of the wild, rollicking Irish soldier, and as we sing, can see him vividly before us. Charles Lover is one of the most remarkable characters of modern times. He has succeeded as a novelist, as a poet, as a musician, and is perhaps the only living individual who wears the highest honors of these sister arts. They all have made him a favorite pupil, and have each crowned his brow with their laurels.

It is a fact that any one with diligence and perseverence can succeed in any one art or science, but it requires a most brilliant and versatile mind to succeed in all, and nature must have so bestowed her gifts, or no study, however faithful, could enable the toiler to earn his reward. We have all peculiar talents that are born with us, and the powers that are necessary to enable us to succeed in the attainments of art, are seldom coupled with those that produce men of extensive scientific knowledge.

HORTICULTURAL.

COMMERCIAL NURSERY,
SAN JOSE.

THE Proprietors of this old established Nursery are now prepared to furnish to their friends and patrons the
Largest and Most Select Collection of
FRUIT, SHADE, AND ORNAMENTAL TREES, VINES, &c.,
ever offered in this State,
At Reduced Prices!

The FRUIT TREES offered by us are all grown and worked in the Nursery by us, from varieties obtained from the celebrated MOUNT HOPE NURSERIES, o Rochester, most of which we have fruited in our Orchards, and offer for sale only such varieties as we have found to be best adapted to this climate.

We have in Nursery:
25,000 APPLE TREES, of two years' growth, large size, thrifty, fine heads.
10,000 One year from graft.
1,000 Three years' growth, extra large, fine Trees, suitable for planting in yards and gardens, and such as cannot be obtained in any other Nursery in the State.
2,000 PEAR TREES on Pear stocks, one and two years' growth.
2,000 Pear, on Angiers' Quince, one year from bud.
3,000 CHERRY TREES, of twenty-five best varieties.
5,000 PEACH, of twenty varieties, one year from bud.
1,000 PLUM, of twenty best selected varieties.
APRICOTS, six varieties.
NECTARINE, SOFT-SHELLED ALMOND, &c. &c
10,000 GRAPE VINES, Los Angeles, 1, 2 and 3 years' old.
3,000 Catawba, Isabella, Sweetwater, and foreign varieties.
GOOSEBERRY, STRAWBERRY, RASPBERRY, CURRANTS, &c., &c.

Catalogues can be obtained on application at the Nursery, by mail or otherwise.

All orders from a distance carefully attended to, securely packed and shipped to any part of the State, at the risk of the purchaser.

Our terms are cash, or short credit, on approved notes, on delivery of the Trees at the Nursery.

Explicit directions for marking and shipping should accompany each order, and when particular varieties are wanted, state whether and to what extent others may be substituted, in case the varieties cannot be furnished. Persons trusting to us to select varieties may rely upon being furnished with the leading sorts, and proper proportion for each season.

v8-23 SMITH & WINCHELL.
Agent, in San Francisco, C. W. LECOUNT.

FINE LAWTON BLACKBERRY, very choice; the *only* lot imported.
New Melons, comprising, Hybrid Persian, Green Flesh, Bromham Hall, Trentham Hall, Hammond's Green Flesh, Honfleur Persian, Hybrid Persian, Yellow Flesh Hybrid, Webber's Golden Beechwood.
Cucumbers—Walker's Rambler, Manchester Prize, etc.
Flower Seeds—New Balsams, German Asters, Pansies, Picotees, Verbenas, and other choice Seeds, fresh and pure.
One case Fruit and Ornamental Tree Seeds, containing all the choicest Tree Seeds that can be obtained in this country or Europe: Pear, Quince, Apple, and other Fruit Tree Seeds.
Orders will be filled in rotation. WARREN & CO.,
2 California Farmer office 130 Washington st.

To Seedsmen, Planters, &c.
THORBURN'S Preliminary Wholesale Priced List of **Vegetable and Agricultural Seeds, Dutch Bulbous Roots, Double Dahlias, &c.,** for the Fall of 1857, is just published, and will be mailed to dealers and others requiring seeds in quantities, inclosing a stamp for return postage.
This year's Seeds, so far as harvested, are of prime quality, generally abundant, and prices correspondingly moderate.
J. M. THORBURN & CO., Seedsmen, &c.,
v8-17 3m 15 John street, New York

Rare Melon and Cucumber Seed.
WE have received a few packages of NEW PRIZE MELON and CUCUMBER SEED, from Europe—worthy especial attention. WARREN & CO.,
1 Washington street (up stairs)

The Leonardi Cauliflower.
THIS famed Cauliflower has already astonished every grower of this species of the Brassica tribe, and specimens have been shown, having grown from twenty to thirty pounds each. The seed is rare, and the price, now, for a quarter pound package is $5. WARREN & CO.,
1 130 Washington street (up stairs).

PAINTS, OILS and WINDOW GLASS
DEPOT.
OLIVER & BUCKLEY
HAVE NOW LANDING, AND IN STORE—
4,700 boxes WINDOW GLASS, assorted sizes;
150 boxes STAINED and GROUND GLASS, assorted colors;
2,500 gals. VARNISHES, Tilden & Nephew's;
doz. Paint and Whitewash BRUSHES, Adams';
Together with the largest stock of PAINTS, OILS, &c., &c., in the State, which we offer for sale at lowest rates, at
9 86 and 88 Washington street,
87 and 89 Oregon street.

The California Farmer.

SAN FRANCISCO, FRIDAY, MARCH 19, 1858.

Help Us!

Yes, friends, help us in a good and glorious work! For several years we have had many applications, from those who feel deeply interested in agriculture, to have some person sent out over the State to analyze the various soils, which are so different, even on the same ranch. It is well known that some of the most practical men of our State have been greatly disappointed in their crops, from a want of knowledge of the character and condition of the soil upon which they plant. It is well known, too, that in some counties the grain crops are a failure, in other counties the root crops do not succeed, in a third instance the vine makes but a slow progress, while, in a fourth, all flourish, and this arises from the fact that the *soil* in which these products can feed is there found, and in the others it is not; and, in order that this matter may be fully and clearly laid before the cultivators, we should hope we may be aided in a plan which we have much at heart, and which we can present to our readers, very briefly, as follows:

We desire to employ the most suitable person that can be found, who is thoroughly versed in the analysis of soils, and to send him forth over our State, commencing at the capital (Sacramento), visiting every county, and making a careful analysis of the various soils in all the various localities in every county, and we wish to do this as a *free-will offering* to those who are most interested—*the farmers;* but such a task or plan is one of time and cost. It would require months and years to do it as thoroughly as we should wish, for we would like to make a test upon every principal grain ranch, stock ranch (where grass is wanted), every orchard, nursery and garden in the State, and this is a labor of some moment to all, and when well done, which it shall be if done at all, would confer a greater benefit upon the farmers, and upon the State, than could be named in millions of dollars.

And now, what is the kind of help we want? We do not want to beg. Oh, no. We do not ask donations. No. We only ask that those who may have delayed sending their dues to us, should do so at once, and, in addition, use their influence with their friends to introduce our Farmer to their notice.

If the farmers of our State, and those interested in such a work, will but aid us only as we deserve, in so good a work, that which we now propose, can and shall be prosecuted to great and beneficial results, and every man who owns an acre of land for cultivation would be the gainer, although it would not cost him a dime, directly.

What then is the work for which we ask the earnest coöperation of our friends? It is the analysis of all the various soils of our State, by which the cultivators in the different parts shall know *what crops* can be most *successfully* grown, and all the reward we ask is that those who are indebted to us shall promptly pay us, and give us for themselves and their friends that generous support which such a public work shall merit.

In making this appeal we trust that there are many hundreds of persons who have never yet been asked to subscribe for the California Farmer, who will now cheerfully do so, when they know that the journal, of itself, is indeed worthy of their support, independent of the proposed plan which will cause an outlay of *several thousands of dollars to complete.*

We can only say, finally, that we do believe that this subject will be received with satisfaction, and meet with a generous response, for our patrons, many of them old and tried friends, well know we shall labor earnestly in the good work. We shall be happy to hear from all, on this topic, and receive any and all suggestions.

American Wines.

The fame of American wines is fast spreading over the world. Orders are constantly received by all the manufacturers of California wines, from the East, and from Europe. Our purpose now is to call particular attention to the famous wines of Longworth & Co., of Cincinnati, Ohio; their famed sparkling Catawba and Isabella, and their still wines also of the same name; these are all of the highest character, and the success which has attended their manufacture and introduction over the world is without precedent.

California consumes more wines than any other State of like population, and California will be a great wine-making and wine-exporting State, and we trust ere long to be able to announce that the Catawba wine of this State shall equal that of Ohio; for we believe the Catawba grape will do even better here than in the East. It was most fortunate for Messrs. Longworth & Co. that they selected the house of Meeker & Co. as their agents for the sale of their wines in this country, for although California is bound to advocate the preference for her own wines, in justice to the excellent American wines of Messrs. Longworth, no house on the Pacific coast could be better selected than the house of Meeker & Co. to make sale of their wines. By their extensive trade and widely extended popularity, it is well known they trade only in wines of the very highest character—and for the quality, character and variety, we can point to their list in our columns.

A New Axle-Grease.—We are most kindly disposed to our friends, Messrs. Hucks & Lambert, who have made the best axle-grease in the world; but we only wish to hint that *castor-oil* is one of the best articles for wheel grease in its pure state; it will last long and operate most remarkably. Let it be tried, and then raise the castor oil bean and make our own axle-grease.

The Flour Speculation.

"Straws show which way the wind blows." The papers of the day announce, among the various importations from the Sandwich Islands (from Honolulu), *three hundred barrels Flour.* To us, this seems a new product of the Islands, for we had all along supposed they were a market for American Flour. But the tables are turned; they will now supply us; and this is their *first* shipment; and it will be a profitable one, provided the market don't depreciate too rapidly.

This lot came in perfect order. We learn that from 300 to 500 barrels more are expected by the Fanny Major. Thus the work goes on. The play has begun—and each week we may look for arrivals of Flour from all parts of the world.

We learn, from one who knows, that when he left Melbourne, Flour was $7 per barrel. Our informant arrived from Melbourne about a week since, and he states that had he known the state of this market before he left he should have brought Flour. He further states that the news of our market would reach there shortly after he left, and it would not be at all out of expectation to see quite a number of parcels from all that section of country, and we believe those who now anticipate high prices will soon be astonished at the condition of our market, and the course pursued by those who have raised the price beyond its real value. Those journals that have cried up the price, will soon see that we shall be the recipients of Flour from every port that is in communication with us, where there is a surplus quantity, and it will come in all quantities, small and large, as a speculation, according to the purse of the speculator.

Those parties that seem so well posted in the quantities of Flour from New York, and the other ports East, will find quite a nice amount *over their figures* before the harvest day.

These are not pleasant items to make, we know, to those who prophesied otherwise; yet we believe them, nevertheless. Our sorrow comes in the reflection that all this must inevitably result in great injury to our farmers, at the opening of another harvest. Such will always be the result when any article of product has been fictitiously raised beyond its real value—what is gained on the one hand is lost on the other.

These are our views. We leave them for proof, as the coming days roll on. Let those interested note well these hints.

The Atheneum.

The first number of this new claimant for public favor came to hand too late for us to notice it in our last week's issue. Having observed the severe criticisms of some of our journals, and the kind words of others, before we received a copy of the work, our interest was excited to an examination of it when it should be laid upon our table. We are now free to express the pleasure we feel in extending to the lady Editress and to the proprietors of the Atheneum those courtesies, and that welcome, which we feel they deserve, and our earnest wish for their unbounded success in this new and laudable enterprise.

Envy forms no part of our nature, and malice we know to be a bad digester, and, in the walks of literature and science, the more help we have, and the more light that is shed in our path, the more certain shall we be to ascend, and to ascend safely, and we are so constituted that we prefer to see the bright side always in preference to the dark side, and rather to encourage in the way of well-doing, than to cavil and detract: we prefer to *build up* rather than *pull down.* We hail, then, with much pleasure, the advent of the Atheneum as an able advocate of a better literature for the family circle. We have perused the first number, and we find sufficient to praise, nothing to censure, and when we are reminded of all the circumstances under which the first number was issued, when we call to mind that as strangers the Editress and proprietors came, that amid sickness and disappointment, and with unmerited rebuke, their debut was made, we must congratulate them upon their success. If, under such circumstances, number one appears, and there is found so much to approve, they may indeed take courage, for each advancing number will add to their courage and strength, and friends will gather rapidly to sustain them.

If we understand the object of the Atheneum, it is not to seek the breath of popular applause, merely—that is as changeable as the wind—but the grand object is to elevate the standard of literature on this coast, and in so lofty an aim it must be expected that sharp criticisms will appear; this is but natural. This should never discourage. It should rather stimulate.

> "What if the popular breath should damn the Sun
> In his meridian glory? Dost thou think
> His beams would fall less brightly?"

If the courage of the fair Editress, and those engaged in so goodly a work, be daunted or alarmed by the random shot of any relentless enemy, we should doubt their ability to encounter the strife, when in some pitched battle the victory is to be won, and laurels borne off in triumph. But we cast aside our doubts. We have faith in every good work, and the promise of the Atheneum is too high, its field of usefulness too hopeful, to cause a moment's doubt. We are rejoiced to know that words of cheer and solid evidences of friendship and support meet the earnest-minded in her daily round of duties.

There are always trials attending such an enterprise, but those engaged should bear in mind that

> "Heaven but tries our virtues by affliction,
> And oft the cloud which wraps the present hour,
> Serves but to brighten all our future days."

For the information of those who have not seen a copy of the Atheneum we will say, it is a handsome sheet of sixteen pages, royal quarto, handsomely printed, the first number containing a salutatory, setting forth the character of this work, together with many original articles in prose and verse, and of high merit.

"Live it down," is a strain of poetry breathing the right spirit. These are the sentiments that must prevail. The beautiful figure of the "Vine and the Oak," illustrative of reliance upon the true source of strength, is indeed a gem of thought.

Various criticisms, with such original matter, convince us that the Atheneum will live. Where such material is found there is sufficient faith in a good purpose to carry it forward to completion, which we most earnestly trust will be the result.

The Farmers' Foundery.

The first Foundery devoted to the cause of the Agriculturist on the Pacific coast, has been established by T. Ogg Shaw, Esq., the pioneer Plow-maker. Having been invited to be present on the day of casting some large pieces of work for agricultural use, and also some pieces of extra work, we feel it a duty to make known every new plan that is laid for the benefit of the cultivator of the soil. In former numbers of our journal we have spoken of Mr. Shaw as *a working man;* we have watched with much interest the steady, onward progress he has been making, as a thorough mechanic, to advance the best interest of the farmer, and our State, by great and valuable improvements in the character and finish of implements of every kind that are wanted by the farmer.

Mr. Shaw is truly a *pioneer mechanic* and *manufacturer*, and he has had all the various trials and hindrances which ever beset those who with a strong arm, a brave heart and a resolute will, are determined to succeed; and we now have before us a proof of the triumphs of fortitude and perseverance in the Foundery and workshops of Mr. Shaw, to which we now allude. This Foundery is situated on the corner of Sacramento and Davis streets, and is worthy the attention of the farmers when they visit the city, and it is worthy the attention of every mechanic, for they can find many opportunities to see the *marks of progress* in every department of labor. The operation of casting, which we witnessed, was completely successful; it was promptly, quietly and handsomely done under the superintendence of Mr. Waterman, the foreman of the foundery. Mr. W. is an experienced man in this work, coming, as he does, from the Great Novelty Works of New York. The castings of yesterday were heavy *clod crushers*, and they will speak and act for themselves, for they will crush every impediment that comes in their way; and we trust this successful experiment of Mr. Shaw will be ominous of his greater success, acting as a crusher of any obstacle in his way; crushing pulverizing extraneous matter of all kinds, and converting them to *gold*, to aid him to prosecute to a higher degree his plans for California industry. We were pleased to notice several ladies and gentlemen present, taking a deep interest in the industrial labors of working men—for it is such men that *build up our State.*

We took a hasty view of this grand workshop (for a workshop is always grand in our eyes), and we were delighted to notice the different implements now making at this establishment. Some fifteen to twenty men have been constantly employed, and all men of character and talent; the aim of Mr. Shaw being to have the *very best workmen*, so as to turn out the *very best work;* and working men would always find it much for their interest to obtain employment in such establishments, for thereby they acquire information, knowledge and character. We noticed fine cheese presses, of very fine finish, and made from Oregon wood; plows, harrows, churns, wheelbarrows, hay presses, and various other articles, and all of the very best character. We noticed also, that the *sand* now used was such as has not yet been found here, but will be ere long; this was imported from Troy, N. Y., and is noted for fine casting. Another process of Mr. Shaw, is "a mill to grind sand," so as turn out remarkable specimens of high smooth finish.

We have thus spoken of these works, yet briefly, our aim being to make known everything that tends to elevate *labor*, encourage industry and reward skill; and although Mr. Shaw has never had a "service of gold plate," a "magnificent gold lever watch," or even a "gold-headed cane," yet we believe he deserves them all as much as any person that has ever yet received them on our coast; for he has promoted the cause of *human industry*, has nobly rewarded the laborer, and these are more worthy of public approbation than the hero of a hundred battles. These are the deeds that should be recognized by those who would build up a State. One of the most important features of this enterprise of Mr. Shaw, is the retaining the gold in our State, to increase and build up the industry and secure the permanent prosperity of California.

To Our Readers and Correspondents. Our readers will be most happy to welcome "Bessie" again to our columns; like a loved familiar friend, like a family song, like a household god, many will recognize Bessie, and joy at her coming. The story is a pleasing one, and bearing a good moral.

The Musical Entertainments increase in interest and draw marked attention, and are esteemed most highly. They do honor to the author.

"Mary Glen" will receive the sympathy of true-hearted. Her story of the Evils of Intemperance, will appear next week.

"Queen Bess" commences her notes upon the Drama and Actors. No. 2 will appear next week.

"Soldero's" manuscript came too late for this week. The subjects of his communications, the influence of home, social perils, divorce, and the sphere of woman, are all excellent themes, and worthy the best pen in our land.

We ask the friends of Agriculture to peruse with care the valuable letter of Agricola. Our correspondent's counsels are worthy the highest consideration.

We call attention to the grand proposal of Walter Masterton; that speaks for itself. Will the State Agricultural Society look to it?

Where will the Fair Be? Marysville, of course; but where? We hope in some cool and shady grove, for the time appointed will be in the hottest season of the year. There is a beautiful spot near Mr. Covilland's grounds, which is worthy of thought.

New Publication.

Alsop's Surveying received from the publishers. This is a valuable work. One that will prove of great practical utility. The author says his aim has been to present the subject in its *practical* as well as its *theoretical* relations, in a manner adapted to the capacity of every student, by presenting the theory plainly and comprehensively, and giving definite and precise directions for practice, and to embrace in the work, everything which an extensive business in Land Surveying would be likely to require.

This work is just from the press of E. & J. C Biddle, Publishers, Philadelphia. The author Samuel Alsop, Esq., Teacher of Mathematics, author of a Treatise on Algebra, &c.

To a country like California this work will be invaluable. Orders can be left at our office.

A. L. Edwards & Co.—Family comforts and luxuries are great blessings, and it is not every one that enjoys the one or approciates the other. Now a good family grocery is a promoter of peace and good will, a promoter of individual and public health, a means of prosperity to the masses of the working people. Perhaps some may question our position in the argument, but we can prove it. When a family sends to a store for their family groceries that are needed, if the grocer sends every article of the *best quality*, there is no complaining, no fault-finding; all things proceed on in the family with mistress and cook in a pleasant and peaceable order, the articles are prepared, dinner is provided, custards, sauces, and jellies all right, and the gathering around the family board is all harmony and peace. So much for patronizing a *good family grocery.* Again, when a family are provided with the best quality, a breakfast or dinner is always better provided, and the result will be, those who come to partake, do so with good appetites; food relishes and they feel happy. Good digestion and good temper promote health, and these again affect the public weal, and so all who enjoy such luxuries go forth with cheerfulness and energy, and take hold of business with so good a relish that they are sure to succeed, and thus we would make out our position. But the next thing is for us to show where such a good grocery can be found. We can point to our advertising columns and find them there always, for we advertise for none but the very best, and having spoken of others previously, we now have reference to the long established house of A. L. Edwards & Co., who are so well known to our community that a visit to their store will furnish proof that we have not spoken amiss.

"Molly put the Kettle on, and we'll all take Tea."—We had almost resolved that we would never drink tea again, for we remember the awful stories we had read of "tea-table talk," and "green-tea slanders," "black-tea stories," etc., but just looking into the store on Washington street, called the *East India Tea store*, known as Smith's Tea store, we could not but admire the perfect neatness of everything around, and unconsciously we "drop in" to look. Do you drink tea, Colonel? says the polite proprietor. Sometimes, we responded, and a small parcel was placed in our hands, with this single admonition, try! We did so. We made it ourselves, and we drank it and we dreamed, and *such* tea; reader, if you *do* drink tea, please go and try a sample of *that* tea, and you will feel as happy as any of the Royal family who drink their Imperial beverages.

Industry, Economy and Pleasure.—The introduction of the Sewing Machine into California, will work a revolution in many departments of industry. We have visited the show rooms of Messrs. Wheeler & Wilson, on Sacramento street, and we feel that these famous sewing machines will create wealth for California. The implement is a pretty piece of furniture, and a lady before it, previously unaccustomed to labor, may imagine she is at her piano. Until she becomes accustomed to work, by degrees, the lady will find the exercise beneficial to health; and she will also find that "a penny saved is as good as a penny earned," and the gain, if not actually needed, can be given to charitable purposes, but a great gain will be had by introducing home industry, and thus instruct the youth to labor. We would earnestly invite all to visit the show rooms of Wheeler & Wilson, and see the working power of these splendid machines. Ladies that want employment will find, by these implements, a way to earn a handsome livelihood.

Selleck's Photograph Gallery.—We take pleasure in noticing the gallery of this excellent artist. The views, taken by Mr. Selleck, of many of the homes of Californians, are truly beautiful, and we wonder every owner of a home should not instantly procure one. Should fire or any calamity occur, the view of home would be invaluable in after years. We have a view o our hall in Sacramento, before the fire in '52, and that view is beyond price to us. Go then, say we to all who love home, and secure what is now dear to you, and you will never regret it.

Many Thanks for those samples of California Wine, from Sainsevaine Brothers. The Champagne (the drink of angels), the Port, and the White Wine, were all of the very best; and we feel proud to know these Wines are now considered far superior to much of the imported Wines.

L. E. Gould, Esq., also sent us a bottle of his White wine. It has been tested, and by connoisseurs too, and was pronounced equal to the number one Hock of Europe.

J. W. Tucker's.—Broadway, New York, and Chestnut street, Philadelphia, may boast of their stocks of silver plate and rich jewelry, and they may make as grand a display as they please and herald their wares widely, but they can draw but little of our wealth abroad to them, for while we have J. W. Tucker, on Montgomery street, he can and will supply his friends and patrons here with as elegant and rich materials, and as low as Broadway or Chestnut street.

☞ **Our New York Agency.**—A. O. Moore, Esq., Bookseller, 140 Fulton street, is our authorized agent in New York city, to receive advertisements and subscriptions for the Farmer, to whom we refer all our patrons in that vicinity.

☞ Patrons of the Farmer, in the East.—Not having established agencies in the other States, except in New York, referred to above, we trust that all who desire to make known any valuable Implement, or manufacture, by advertising in our columns, and who cannot easily and conveniently communicate with New York, will make known their wishes directly to us. Having a wide circulation we can give to all who wish an extended notice to their inventions an excellent opportunity of so doing.

☞ To Book Publishers.—As it is a well-established fact that California is one of the greatest purchasers of Books, Periodicals, etc., we need only remind Publishers and Book Dealers that our journal can accomplish as much for them, and bring their works into as an immediate notice as it is possible for an advertiser to do, circulating as we do over the entire State.

We can refer to our columns, at all times, with pride, for the character and standing of our advertisers, our aim being to advertise only for first-class houses.

☞ Contributors East.—We desire our friends to bear in mind that our Publishing-office is in SAN FRANCISCO.

☞ To State Agricultural Societies, and Boards of Agriculture.—As we desire to secure all the information possible upon the science of Agriculture, and its progress in every State of our glorious Union, and the world, we shall be truly grateful to those Societies, or individuals, who will forward to us Records and transactions of Societies, Reports of Shows and Meetings upon this and all kindred subjects, assuring them, in return, that we will forward to them a full equivalent in such matter as shall amply reward them, agreeing to respond to their wishes with much pleasure, always having opportunity to send abroad much that would be of great value, when we know where it will accomplish the most good.

Books, Pamphlets, Reports, and Seed packets, can always come best by mail.

The California Farmer.—We mail copies of this number of the Farmer to many distinguished friends of Agriculture, in various States of our Union and in Europe, and trust we may have the pleasure to enrol their names as subscribers. A five dollar gold piece, inclosed in a card, will come safely in a letter, by mail, or clubs can be formed, and other remittance sent. Who will appreciate California?

☞ Friends of California, would you build up our State? Would you make it prosperous, and the people happy? Labor to develop the rich resources of the State! Strive to arouse the people to the importance of an increased immigration from the East! Send them true accounts of our climate, soil, and productions! Give them reliable news of the bright side of California! they have enough of the dark side. Send them the California Farmer regularly! Come and subscribe for it, and we will mail it for you. This will bring your friends! This will help build up California!

Holloway's Ointment and Pills.—The giant strides of intellect in this country can have no better exponent than the almost absolute dominion over all forms of external and internal malady achieved by Holloway's Pills and Ointment. Even scrofula and other diseases, supposed constitutional and incurable, give way before them. Beware of Counterfeits!

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot or box.

Received per steamer Sonora a Letter from our valued N. Y. correspondent B., which will appear in our next.

POSTSCRIPT.

ARRIVAL OF THE SONORA.

FRIDAY EVENING, March 19th.

The mail steamship Sonora, anxiously looked for, and the non-arrival of which has caused the out-going steamer to be delayed till Monday 22d, arrived about 9 o'clock this evening, to the great relief of the community. It appears the steamer was delayed in New York till the 21st February, and the heavy gales on this side lengthened the passage somewhat. The Sonora brings a good number of passengers.

The news by this arrival seems of no particular importance. The usual number of calamities are reported. We give a few items of general interest:

A majority of the Senate Committee on Territories are preparing a report and a bill for the admission of Kansas into the Union, under the Lecompton Constitution. They are acting without reference to the question of whether the Free-State or Pro-Slavery party has the Legislature and State officers.

In the Louisiana Senate, notice has been given of the introduction of a bill to import five thousand negroes from the coast of Africa.

The Secretary of the Treasury advertises proposals for the issue of $5,000,000 of additional treasury notes authorized under the late law.

The Presidents of the Banks in Baltimore held a meeting on the 5th, and resolved to resume specie payments. All the Banks are now paying specie.

Hon. Millard Fillmore, Ex-President of the United States, was married at Albany, N. Y., on the 11th ult., to Mrs. Caroline C. McIntosh, of that city.

Flour at New York, on the 20th ult., was selling at $4 40 to $4 75 per barrel, for extra brands. Wheat was firm and quiet, and sales at $1 10 to $1 20 per bushel. Corn was selling from 70 to 71 cents. Pork, at $15 60 per barrel.

The steamship Leviathan was successfully floated in the Thames on Sunday, Jan. 31. Arrangements had been perfected to complete the launch on the day previous, but the prevalence of a heavy gale rendered a postponement imperative, and, as Sunday proved most auspicious, it was determined to proceed with the operations, rather than encounter the risks which a further lengthened delay would have entailed. The final floating of the great ship was effected with perfect ease, and no accident of any kind occurred, although the river was literally covered with boats full of people, and the timbers forming the cradles, which had been kept down by the weight of the vessel, ascended with great force some twenty or thirty feet above the surface of the water. The scene was a brilliant one, and the enthusiasm of the multitudes who witnessed the launch was manifested in loud and continued cheering.

The Leviathan was towed by four powerful tugboats to her moorings opposite Deptford, where she will remain until her internal arrangements are completed.

The mail, it is said, brings out land grants from the United States for important ranches, called "Cotate" and the "Canada de Jonive," the claims to which have been confirmed by the courts.

The Independence correspondent of the St. Louis Republican under date of the 16th ult., says that the Salt Lake mail arrived there last night. The snow was from one to six feet deep on the mountains, and the weather intensely cold. At Camp Scott, Jan. 1, the troops were in good spirits, earnestly wishing to make a descent on Salt Lake City.

Recent developments in St Louis show George Smiser, late Collector of St. Louis county, to be a defaulter to the amount of $160,000.

It commenced to snow early yesterday morning, says the N. Y. Times of Feb. 20, and continued throughout the day. Sleighs were running in Broadway last evening, and at midnight there was every likelihood that the storm would continue.

Rev. Beverly Waugh, D. D., senior Bishop of the Methodist Episcopal Church, died Feb. 17th, in Baltimore. His age was about 70. He entered the Methodist ministry in the year 1800, and has been in active service for a period of forty-six years.

LATE FROM CANTON.—By the arrival of the ship Daring, 45 days from Hongkong, we learn that Canton had been captured by the Allies, and at last dates they were in full possession of the city. Governor Yeh and several of his officers had been taken prisoners and were detained on board the Invincible. The blockade was to be raised on the 1st of February. Things were quiet in Canton.

COLD WEATHER, SNOW, &c.—The last week or ten days has been unusually cold, the thermometer falling below the freezing point in many places. At Sacramento ice was made a quarter of an inch thick, and cold blustering winds prevailed; snow fell and covered the ground like a white vail. Snow-clouds swept over Stockton, and dropped their fleecy flakes like a mantle there. In this city, fires were needed to warm the fingers, and on Wednesday afternoon a dense mass of black clouds came over our city from the golden gate, and with a cold blast scattered the sharp hail until the ground was white. We have some fears for the tender blossoms of fruit trees. We hope, however, our fruit crop will escape.

We learn from our friends at Alameda, that the cold has been very severe, and ice made freely. From Centerville we hear of ice half an inch thick, and serious fears for the fruit crop. From Napa, we have the same information, and we presume over all our State the weather has been unusually severe.

Will orchardists and gardeners please send us accounts of the weather and the effects of the cold, from the several localities?

TO CURE A COUGH, buy a bottle of the Balsam of Wild Cherry. We have more faith in this combination of Dr. Wistar, than in any other remedy known, having witnessed its entire success in many cases of protracted cough. None genuine unless signed I. Butts on the wrapper.

WINES AND LIQUORS!!!

S. H. MEEKER & CO.,

59 Front street, San Francisco.

	Chester White Hogs.	

Fancy Fowls—all the best varieties.

All communications addressed to us will receive immediate attention and we shall be happy to correspond with any and all upon the subject. Address

2 WARREN & CO., Cal. Farmer Office.

☞ REGISTRY OF STOCK.—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.

☞ J. Q. A. Warren, just from the East, will be happy to see all interested in the subject, at the FARMER Office. January 8, '59.

☞ **A. W. FABER'S LEAD PENCILS.**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not failed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York." E. FABER, Sole Agent

v9-1 6m 133 William street, New York.

☞ **Efficacy of the Oxygenated Bitters.**—From J. C. Dunn, Esq., late City Treasurer:

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say I have received more speedy and effectual relief from the use of the *Oxygenated Bitters*, procured from you, *than from all others remedies*, and most cheerfully recommend them to all who suffer from a similar affliction.

Yours truly, JAMES C. DUNN.

Numerous certificates have been received from citizens of the highest respectability. Every dyspeptic will be amply repaid for a trial of this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. MORRILL, cor. Third and K sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 9-1m

Fine, beautiful hair—jet black or brown,
Or tresses, curling or golden—
Is the certain result—without chance or doubt—
Of the use of LYONS KATHAIRON.

☞ **The immense sale of Lyons Kathairon**—nearly 1,000,000 bottles per year—proves its excellence and universal popularity. It restores the hair after it has fallen out, invigorates and beautifies it—making it soft, curly and glossy—cleanses it from all Scurf and Dandruff, and imparts to it a delightful perfume. The Ladies universally pronounce it the finest and most agreeable article ever used.

Sold by all dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO., Proprietors and Perfumers, 63 Liberty street, New York.

PARK & WHITE, Wholesale Dealers, 9 6m *San Francisco, California.*

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**

Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of

WILLIAM A. BATCHELOR, v8-13 1y 233 Broadway, New York.

HOTEL

INTERNATIONAL.

San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present

Lessee and Managers,

A. S. HALEY,

JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most POPULAR PLACES OF AMUSEMENT, THE PRINCIPAL THOROUGHFARES, THE FASHIONABLE PROMENADES, AND STEAMBOAT LANDINGS; thus rendering it at all times the most

DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen, during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, LESSEE.

ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

The Collegiate Institute at Benicia, Cal.

THE School Year at this Institution, is divided into two terms of five months each. The Sessions will open on the 4th of January and the 5th of July; closing on the 4th of June and December.

To the Patrons of the Institute we would say, that the facilities for obtaining a good education have been much increased this year. The range of studies will be ample, embracing the Ancient and Modern Languages, and a thorough course in the Physical Sciences. Neither are the accomplishments overlooked: in Piano and Vocal Music, we have the best Teachers in the State Thoroughness in the Elementary Branches, before advancing into the higher studies, will be a primary requirement. We shall continue to follow, in our government, school arrangements and method of instruction, the Normal School or Prussian system, which has been adopted in the Eastern States with so much success.

Pupils will be fitted for the University, or will be trained with a view to the completion of their education in this School, as may be requested by the parents. Where no special directions are given, the course of the Institution will regard the Modern Languages, Natural Sciences and Practical Avocations of life, as the sine qua non of a good education, and the Ancient Languages as accomplishments.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location of the School is easy of access from all parts of the State; the buildings are excellent; and the quietness and healthfulness of the village are unsurpassed by any place on the Pacific.

TERMS, PAYABLE QUARTERLY IN ADVANCE:

	PER MONTH.
Tuition in the Higher English Studies (including Natural Philosophy, Chemistry, Algebra, Geometry, &c,	$ 8 00
Theory of Surveying (including Linear and Linear Perspective Draughting)	5 00
Latin and Greek	5 00
French and Spanish	5 00
Music, with use of Piano	10 00
Drawing	2 50
Booking-Keeping	5 00
Common English Studies	6 00
Vocal Music, without charge	
Board (per week)	6 00
Washing (per session)	20 00
Entire expense of Board, Washing and tuition in the Common English Branches, per year	$150 00

No Lights, Bedding or other Furniture required to be furnished by the pupil. No extra charges of any kind are made above those specified.

For further information or references address the Principa v8-21 3m cop C FLATT

STOCKTON FEMALE SEMINARY.

THE First Session of this Institution will commence on Monday, March 1, 1858, and continue five months, under the charge of Dr. O. Collins and Lady, assisted by competent instructors.

FEMALE INSTITUTE.

THE Female Institute in Santa Clara, under the management of James Rogers, A. M., still enjoys a good degree of prosperity. The Board of Instruction is ample, and the Terms of Tuition as liberal as in any school of equal grade in the State.

Who Wants a Cheap Piano?

THE subscriber has for years been engaged in the purchase and sale of PIANOS, HARPS, MELODEONS, GUITARS, ORGANS, MUSIC, &c., and, being a *practical musician*, has given entire satisfaction. He buys *directly from the manufacturers*, and is thereby relieved from heavy rents and other expenses. Every instrument sold by him receives his personal attention, is *guaranteed* not only as to *quality*, but as being *cheaper* than it can be procured at any wholesale house in America. A printed list of prices, accompanied by the most unquestionable references, will be sent free to all parts of the world, on application to JAMES M. EDNEY,

56 John street, New York City.

*** Circulars to be had, and orders received at the FARMER Office, San Francisco. v7-22 1y cop

LAYING OUT GARDENS.

☞ THOSE WHO WISH THEIR GROUNDS LAID OUT in the best style, and those who wish them remodeled, can have them done in the most scientific manner, by sending to our Office their orders; or they will be waited upon, and designs made and Gardens completed from the rough sod. We have those under eye on whom we can rely to complete any plan of work of public or private Ground however extensive, and furnish all the required article of Trees, Vines, Shrubs, Plants, or Seeds.

BOOKS, &c.

Text-Books upon the Sciences,

The Publishers would ask Teachers to examine these works for themselves. Numerous favorable notices from distinguished sources have been received, and might here be appended, but are omitted, with the exception of one letter respecting Parker's Philosophy, and one respecting Porter's Chemistry, referring the reader to A. S. Barnes & Co's "Descriptive Catalogue," for any further information respecting the character and merits of any of the works mentioned, and of their publications generally.

Just published—Root's New Work on School Amusements; or, How to make the School Interesting, $1 25.

A. S. BARNES & CO., v9 51 and 53 John street, New York.

THE

"HORTICULTURIST"

AND

Journal of Rural Art and Rural Taste.

(Commenced by the late celebrated A. J. DOWNING.)

Conducted by J. JAY SMITH, Editor of the North American Sylva.

THE increasing love of Rural Life has brought this popular publication into extended notice. Its success has been amply proved by a large addition of readers, and it is now offered to public patronage with confidence. It embraces in its scope of subjects everything pertaining to the country and country-pursuits, and aims to instruct while it amuses: it is, in short, as now conducted, a popular RURAL MAGAZINE, designed to interest all lovers of the Garden, the Country-house, the Cottage, no less than the Botanist, the admirer of the Green-house, Conservatory, Grape-house, Fruit Cultivator and Planter. Its correspondents are those who have long devoted their energies to these pursuits, and it is believed the number of these, and the information they impart, is greater than any other periodical can boast of either in Europe or America. Indeed, the work has become indispensable to the well-informed country-dweller, who, by a perusal of its varied pages, may maintain an acquaintance with all that is passing in the fruit-garden and orchard, the nursery, the villa, and with the beautiful in nature, whether it is improved by art or adorned by taste. In its Rural Magazine character it is addressed to all who love information, and it has thus become a welcome guest both in town and country. Its circulation now embraces the entire Union and Canada, and endeavors are constantly used to increase its attractions by a liberal outlay in embellishing it with costly engravings of fruit, dwellings, trees, and those numberless rustic adornments which make the individual home attractive.

A NEW VOLUME (13th year) commences with the January number for 1858: and it will be the constant aim to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style, each number containg 48 pages, embellished with a frontispiece and several other original and well-executed engravings. The volumes, taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature. As an advertising medium it has few superiors.

TERMS—Two Dollars a year; Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the Art. Price, $5.

☞ All subscriptions must be addressed to the Agents, or to ROBERT PEARSALL SMITH, Nos. 17, 19, and 21 Minor street, Philadelphia.

WARREN & CO., Agents for the above work, for California. Subscriptions received at the office of the FARMER, 130 Washington street (up stairs). 9v2

TWO HUNDRED ROOMS,

Among which are a great number of

Large Single and Double, and Suits of Rooms, *Fitted up Expressly for Families.*

SAMUEL KELLEY, v8-15 Proprietor.

Ladies' Department.

TRUE LOVE OF THE BEAUTIFUL.

The following beautiful lines we find in the Wide West of the 13th inst. They come to us as the aspirations of one of the Lady Teachers of our Public Schools, and are worthy a place in the poet's corner of every journal; for when the mighty principle of LOVE is ingrafted in the hearts of the "teachers of youth," we may look forward with hope to a dawn of better days. We rejoice too in the knowledge, that a teacher of youth will thus earnestly plead for the beautiful Flowers; they are indeed "types of angels," and those who truly love Flowers, will always find a voice that whispers them:

"I go! my garments bear away the fragrance on them laid,
And with their many-voiced perfumes tell where to-day I've strayed."

TWINE FLOWERS.

BY MARY VIOLA TINGLEY.

Oh, twine flowers! Ne'er for my brow
Ask I a crown;
No coronal with rich pearls rare
In beauty strewn.
Types of angels—how sweet the thought!
How near to Heaven.
For MY crown, oh, be it of flowers
By Nature given.

Oh, give me love! No scepter great
To sway, be mine.
I'd rule a nation all with love—
That power divine;
No pompous throne—I'd rather have
A simple seat
'Mong those I love—whom with fresh smiles
I e'er could greet.

No templed halls! I'd have the fields
With bright sunshine,
Where winding brooks lull o'er small shells—
I'd ne'er repine—
Where truant zephyrs rustle leaves
And blow sweet favors;
'Twere music rare! I'd live in love
'Mong woodland bowers.

A crown of flowers—a simple throne—
The scepter, LOVE—
These would I have. No more wish I:
My home the grove.
I'd worship there at Nature's shrine,
'Neath shining heaven,
Where grateful songs of love, by birds
To God are given.

SAN FRANCISCO, March 1, 1858.

[For the California Farmer.]

AUNT BESSIE'S STORY.

BY HER NAMESAKE.

FIFTEEN years ago! Can it be possible? Dear me, how time does fly! It seems no longer ago than yesterday when, from a quaint, old-fashioned vehicle, which had been sent to convey me thither, I was set down at my paternal grandfather's residence. I had dreamed of this long-promised visit almost nightly, and it had, I fear, occupied more of my waking moments than had my studies, for the last term, at Miss B.'s. The ardently wished-for day at length arrived, when we were to have a respite from our mental labors—a vacation of four weeks! Only think of that! And mine to be spent in the country! the thought was bliss. I had mastered my last hard lesson in rhetoric—a prayer had been said—the parting hymn sung—and with feelings, I suspect, very near akin to those which the pupils of Dr. Blimber entertained, we bade each other adieu, until we should meet to resume our studies, on the first of next month.

With an ill-disguised pleasure, while arranging my desk, preparatory to my departure, I indulged in the following soliloquy: "There, old Daddy Comstock, lay there a while, I'm mistress of my own actions now; and you, Messrs. Oabol Kirkam & Co., may occupy the same corner. And here, Mrs. Lincoln—*stop!*—She shall not rest among such a set of '*hard cases*.' She shall have a corner by herself. Bless you! I will make good use of the lessons you have taught me in the land of flowers to which I am going. And, Mr. Astronomy, my respects to you: I *do* think a little better of you; so you may lie there. I shall soon look out upon the stars; from beneath that beautiful vine-trellised porch, of which I have heard so much; and then I will remember the many useful and interesting things which your interesting pages unfold. Good bye, Mr. 'Watts on the Mind,' pens, ink and paper, maps, atlasses, slates, and blackboards—I wish you all farewell, for a season. Hope you'll have a good time. *I* expect to." And, giving the key a turn in the lock, the *snap* that resounded through the schoolroom gave a *nipper-like* emphasis to my words. "Huzza! I'm off to the country!" and I skipped with the lightness of a fairy to my little dormitory, on the fourth floor, to arrange my wardrobe and pack my trunk.

My room-mate was a pale girl three years my senior, and an orphan—a tender plant, little fitted to grow upon the rough side of the world. Her fine blue eye shone with a soft and spiritual radiance, and spoke of humility and thoughtfulness far beyond her years. As I looked into her sweet face, I detected a tear, and, in a moment, my light, joyous spirit was hushed of its happiness.

"Oh, Millie! why will you not go with me?" I exclaimed, as I wound my arm around her neck, and her yielding head fell upon my shoulder, and her tears flowed fast. "You know I have spoken of you so often in my letters, and then they would be so glad to see you. You read my aunt's letter, and certainly you could not wish for a more pressing invitation."

"Certainly not, dear Bessie. But then to so trespass upon the hospitality of strangers, when"

"There, hush! I will take no excuse. *Go you shall!* I shall pack up your things with mine, *anyhow*. Let's see. You will want your blue muslin, and this string of pearls to loop up the sleeves—and—oh, come now, say you will go, and assist me in selecting and putting up what we shall look the best in; though, for that matter, you always look well in anything." I looked up and saw, by the happy change in her face, she was half inclined to go—and, taking advantage of the moment, said, "Come down, and talk with Miss B. about it, and get her permission." I placed my arm in hers, and, conducting her along the passage, tapped at the door of the *Lady Superior*.

She bade us enter, and I made known my errand.

"Certainly, Miss Turner, go, by all means. I am well acquainted with Mr. and Mrs. Marshall, and have, many a time, passed a delightful day at their beautiful country seat. I can insure you a most cordial reception. It will do you good, dear; you need the pure, bracing air to give your cheeks a livelier tinge.

I looked, and saw, by the sparkling of Millie's lustrous eyes, that I had won the day. So we bade Miss B. good evening, and I performed a grand *pas seul* upon the landing, to the music of her glad, happy laughter.

The evening was spent in arranging our finery, and placing the articles needed in trunk, bandbox, carpet-bag, satchel, etc., Millie insisting, all the while, I would not wear half I had put up; while I sighed to think of her own scanty wardrobe, and would gladly have shared mine with her; but, unfortunately, "bloomers" were not then in vogue, consequently she could not consistently accept my proffered kindness had it been ever so generously extended.

Morning came, all bright and glorious, not a cloud to be seen. I arose, e'er the eastern horizon began to glimmer with the first faint hues of Aurora, and impatiently wondered why the rest were not stirring. At sunrise the old gardener tumbled out, and, to pass away time, I stole down the back staircase to inquire after his little sick child who had been down several days with a fever. He said it had had a bad night, but he hoped the alarming crisis was past, and it would mend gradually. I slipped a sixpence into his hand, to buy an orange for the little sufferer, and re-entered the house. No one stirring yet! I watered the plants, gave the birds some fresh bread, and, by that time, Betty made her appearance. Breakfast was not long in getting, and, by assisting in setting the table myself, got permission to ring the bell half an hour earlier than usual. In twenty minutes the whole house was astir. I made my *entree* to the breakfast-room in my new linen traveling-dress, which I had ordered my dressmaker to be sure and send by sunrise. Half-past eight found us nearly equiped for the journey. I was all bustle and impatience, while Millie moved about with that calm, self-possessed, unruffled mien which has characterized her all through life. At nine, we heard the welcome sound of wheels, and, looking out, saw the oddest-looking old vehicle in the world. "Can this be my grandfather's carriage?" said I, and a feeling akin to mortification too plainly manifested itself in my telltale face, as I saw it draw up at the front entrance. A plain old man alighted, and the servant ushered him into the parlor, while he conveyed our luggage to the *vehicle*.

I scarcely noticed whether our traveling cicerone was good or ill-looking, grave or gay, so changed were my feelings; and all on account of that ugly old carriage. He had called, on his arrival in the city, but I was absent. The letter of which he was the bearer stated that he was a neighbor of my grandfather, and would be my escort back. His name I had either forgotten or overlooked. I very unceremoniously handed myself into the queer-looking drag, but Millie gave him her hand, and made some passing remark on the beauty of the morning and the pleasure she anticipated. We were soon driving at a rapid pace, and the lovely country through which we passed, and Millie's incessant chatter which she kept up with the old gentleman, made me quite forget the old chaise—it rode *so* easy, and the horses were superb.

On we went, and, after a half-hour's sullen silence, I regained in a measure my accustomed cheerfulness, though I left Millie and the old gentleman to entertain themselves as best they might. I was busy with my own thoughts, and scarcely knew whether they were talking of the weather, or Webster's speech in Congress.

I had seen all of my uncles and aunts save *one*, a youth of twenty, one who was then graduating at old Yale. He was pronounced one of the most talented and promising young men of the age. I had read much from his gifted pen, and heard his sonnets sighed over by the young ladies at Miss B.'s, and pronounced "sweet." I could not but feel proud, though I was then too young to understand all the deep, impassioned strains of eloquence with which his poesy abounded. I had gazed upon his portrait at home, and knew that the noble brow and finely-chiseled features bespoke an intellect of rare mould; now, I was soon to see him face to face, for he had come far, to spend the autumn vacation under the parental roof. I had read a good deal, for one no older than myself, had shed many a tear over the fancied sorrows of some youthful hero or heroine, but little, if any, was the good I gained. But when I had spent a day in reading from such authors as Mrs. Sigourney or Mrs. Child, they never failed to awaken in my mind the most intense sublimity, and my heart was made better and purer for the perusal. If I could have taken them by the hand, and told them of all the deep, heartfelt pleasure, their books afforded me, my happiness would have been complete; but, as yet, I had never been so highly favored as to know a living author. With them, I had associated all that my fancy ever pictured of elegance and refinement, grace, beauty, and dignity; had never even dreamed they could superintend their household matters, darn stockings, or mend baby linen; while those of the other sex I held in the utmost awe, and would have approached his High Mightiness, the author of Paul and Virginia, with as much reverence as ever little "Florence" approached her august papa. My uncle had, a few weeks previous, won the prize for the best poetical essay, and how my heart leaped with pride as I heard the encomiums pronounced upon it. Now I was soon to see and become acquainted with one of these "gifted ones" whom, in my enthusiastic imagination, I had made little inferior to the inhabitants of Heaven!

[TO BE CONTINUED

Woman in Sorrow.

We ask the careful reading of the following wail of sorrow and bitterness, from one who writes upon a subject that is worthy the most gifted pens of the present age. No one that is at all familiar with the condition of society as it is at present, but must see and believe that those words which have been often written in tears of sorrow—"Woman is woman's worst foe,"—are too true. "Mary Glen," writes as one familiar to suffering from this source. We trust other pens will take up this theme, until this dark cloud of sorrow shall be removed:

Alone in the World.

ALONE in the world, is considered almost a crime, if one has not wealth to buy friends with; alone and poor in this world! one had better be dead. No voice to speak cheeringly, no one to take an interest in your cares or griefs; however well you may conduct, no one that will take the trouble to examine how holy or pure your thoughts or actions may be, or how spotless your life, or what circumstances made you alone; but woman's voice rises high against her own sex—"she is alone"—she has no right to sympathy. And they, with all the assumed innocence of an angel, with their hearts black as midnight, with unpitying hand will point and crush those, who are holy and pure compared to them, as our Savior is to the fiend incarnate. Oh, you would-be-virtuous females, who build yourselves upon the ruin your venomous tongues have made. Father, mother, brothers, sisters and friends, and wealth—these to hem you round; and from such protection comes venom worse than the snake ever breathed, upon the pure and spotless ones alone in the world! God is not blind, oh ye affluent slanderers. Your day of reckoning will come, when you will be more lonely and unhappy than the poor beings you have so persecuted! The omnipotent eye is on the one forsaken by the world; but ye will not have that holy confidence in God, of the poor persecuted one; ye will die in despair—and perhaps, *alone*! Then you will begin to know that you are human—the gifts of God you have perverted, and instead of making you charitable, and good, and sympathizing with the lonely, you have hardened your hearts and think the world was made alone for you. You must awake from this, and know that all creatures however lowly, have rights and privileges as well as yourself.

Oh woman, I can forgive you all you do to me; for I know it is done through a false education, and ignorance of your true duty to your sex. But for the sake of those who cannot bear what I have borne unjustly from your tongues, I ask you to have mercy on your own sex, if you expect mercy at the bar of God. If you would approach near to the angels, have charitable tongues—that when you leave this world you may come the Throne of Grace. MARY GLEN.

JOHN D. ARTHUR,
IMPORTER AND JOBBER OF
Agricultural Implements,
Washington street, near Davis,

HAS just received, by late arrivals from the East, and will continue to receive, a large and varied assortment of AGRICULTURAL GOODS, among which are the following, which will be sold *at the Lowest Market Rates*:

Vance's Branch.—New Gallery.

AMBROTYPES, PHOTOGRAPHS,
Daguerreotypes and Melainotypes.

VANCE & CO.,
Corner of Third and J streets,
(Hiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerrootypes and Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,
9-3m Sacramento.

BOOKS, STATIONERY, &c.

IMPORTANT!

I AM GOING OUT OF BUSINESS and

New Treatise on Land Surveying.
JUST PUBLISHED BY
E. C. & J. BIDDLE,
PHILADELPHIA,

A Treatise on Surveying, by S. Alsop. In this work, the theory is plainly and comprehensively presented; directions for practice are given definitely and precisely; and everything which an extensive business in Land Surveying would be likely to require is embraced. Price per copy, mailed to California, $2, postage included. Price of the KEY to the work, mailed to California, 75 cents.

E. C. & J. B. also publish the following popular educational works, and many others extensively used in the Schools and Colleges of our country; and they would respectfully invite School Directors and Teachers to send for a copy of the descriptive catalogue of their publications:

Crittenden's Treatise on Book-keeping. The series comprises the four volumes below named, and for each of them a KEY, and a set of miniature BLANK BOOKS for the exercises:
1. Treatise on Single Entry Book-keeping.
2. On Single and Double Entry, for Common Schools.
3. do do do for High Schools.
4. do do do for the Counting House.
The volumes are severally the text-books in Commercial Colleges in Boston, New York, Philadelphia, Cincinnati, Chicago, St. Louis, Louisville, etc.; in most of the Normal Schools, and a great number of the High Schools of our country; in the Public Grammar and Evening Schools of Philadelphia, etc.; while as a book of reference for practical accountants the Counting House edition is, undoubtedly, the most popular work on the Science of Accounts, published in the United States.

Cleveland's English Literature. *Twenty-fifth Thousand just published.* 1. CLEVELAND'S COMPENDIUM OF ENGLISH LITERATURE, from the 14th to close of 18th century; chronologically arranged; consisting of Biographical Sketches of the Authors, and selections from their works, together with Notes explanatory, etc. 2. CLEVELAND'S ENGLISH LITERATURE OF THE NINETEENTH CENTURY. A sequel to the "Compendium"; arranged on the same plan as it. The above two volumes are text-books in many of the Colleges, in the principal Normal Schools, and in a large number of other first-class Seminaries of our country; and they may with confidence be recommended as an admirable guide or chart for private students of English literature.

Cleveland's American Literature. *Cleveland's Compendium of American Literature*, on the same plan as the author's "Compendium of English Literature," will be published early next year.

Harrison on the Rise, Progress, and Present Structure of the English Language.

The Works of Thomas Dick, LL. D. 10 vols. 12mo. Few books are better adapted for the School or the Family Library, than the works of Dr. Dick.
8v-24 3m

J. L. POLHEMUS

DRUGGIST

J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY,

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

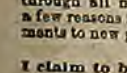
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

Pioneer Establishment.



FOR curing of FISH of all kinds; also for the curing of prime HAMS AND BACON. Always on hand, the best article of Smoked and Pickled Salmon and Herrings, warranted of superior quality, in packages to suit.

The Subscriber is now engaged in Pork Packing, and is desirous of extending the business; for that purpose he will purchase well-fatted Hogs in any quantity.

The Smoking of Beef is also a branch attended to at this establishment.

☞ THE PEOPLE'S PREMIUM ALE. ☜

THE undersigned beg leave to make known to their friends and patrons that they are hard at work doing all they can to supply the orders that are rolling in upon them from all quarters.

Our Card in another column will explain that we go for the "PEOPLE'S PREMIUM," and as we feel they have awarded that to us, we do not fear any opposition or competition—

"Competition is the life of trade,"

And we cheerfully yield to all our competitors a fair field and an open trade, and abide the judgment of the public most cheerfully.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE, *Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach*

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil, and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

MACHINES AND IMPLEMENTS.

TREADWELL & CO.,

IMPORTERS,

N. E. corner California and Battery streets, SAN FRANCISCO,

have now landing, and will receive by every packet from New York and Boston, the most extensive assortment of

FARMING MACHINERY and Implements,

ever brought to this market, embracing all the

Latest Styles and Improvements,

which will be sold at lowest rates.....consisting in part of:

REAPERS:

MANNY'S COMBINED REAPER AND MOWER, WITH WOOD'S IMPROVEMENT..These justly celebrated Machines have become too well known in California to require more than a simple announcement where they can be had. We are sole agents for the Pacific coast, and none genuine elsewhere.

McCORMICK'S REAPER....This universally approved Reaper we keep constantly on hand, and are Agents of the Maker.

KETCHUM'S COMBINED REAPER AND MOWER....This Machine is now very popular—having been greatly improved the last two years.

BURRALL'S IMPROVED GRAIN REAPER. This Reaper cuts six feet, and is one of the strongest and most durable Machines in use.

SEYMOUR AND MORGAN'S REAPER; without the Raker attachment and all late improvements.

HUSSEY'S REAPER....Baltimore make.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.

BOGARDUS' 2, 4, and 6 horse do do.

FIELDS' 2, 4, and 6 do do do.

EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times. Extra points and parts can always be had.

This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.

Do. CUTTERS—Several sizes and kinds; hand and power.

HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.

GRANT'S GRAIN CRADLES—In cases of one dozen each.

Do. FAN MILLS. Also, the Boston Mill.

CORN SHELLERS—Hand and power.

Scythes and Snaiths—best steel Scythes and Lamson's Snaiths.

Hay and Barley Forks—2, 3, and 4 tine; of best makers.

Carpenter's Patent Wire spring-Tooth Horse Rakes, 10 to 15 feet long, with wheels, and seat for driver.

Ox Yokes and Bows—all sizes.

Churns—Thermometer, Dash, and Cylinder; also, Dog Powers for do.

Garden Barrows. Cauldrons and Furnaces. Cultivators.

Horse Hoes. Seed Sowers. Harrows.

Field and Garden Seeds

Of every description, via the Isthmus—this year's growth (1857).

Steam-Engines, 4 to 15 Horse Power.

Suitable for Ranches or Mining purposes.

Portable Flour Mills and Mill Stones—Noyes' make. All sizes, 16 inch to 4 feet.

Belting, Bolting Cloth and Packing—All kinds and sizes of the above.

HARDWARE—The best stock in the State.

MINING GOODS—All kinds in use.

COOPERS' AND TANNERS' TOOLS—Full assortment.

Baling Wire—Annealed.

Hay Rope—Best Manila.

Grindstones—Best dressed Nova Scotia; from 6 inches to 4 feet diameter, packed in casks in sawdust.

Wire Fencing—A neat article for inclosing Gardens, Heneries, &c. Also, for Ornamental Garden work, Grape and Rose Trellises.

Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c, &c.

WHEELER & WILSON

MANUFACTURING COMPANY'S

SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

H. C. HAYDEN, AGENT,

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN

AND

NURSERY,

On the American River, 2½ miles from the Steamboat Levee,

SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,

SHADE AND ORNAMENTAL TREES,

GREENHOUSE PLANTS,

SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;

From 5 feet to 7 feet high;

From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE, embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being CORRECT AS TO NAMES AND VARIETIES, are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of

Shade and Ornamental Trees,

We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

2,000 Carnations, of 120 kinds;

500 Monthly Honeysuckles, of 8 varieties;

500 Acacias, of 10 varieties;

Laburnums, Arbor Vitæ, Myrtles, Euonymous, Silver Maples, Mimosa, Clematis, Cytisus, Eucalyptus, Lilacs, Jasmines, Mock Orange, Althæas, Spiræas, Weigelias, Deutzias; and a general variety of

Hardy and Green House Plants.

☞ Skilful Gardeners provided for laying out grounds. Office at the Nursery, and 171½ Clay street, above Montgomery v7-34

Improved Harvesting Machines.

To the Manufacturers of Machinery in San Francisco.

The undersigned, having recently invented additional improvements in Thrashing and Reaping Machines, desires to contract with reliable parties, now engaged in the manufacture of Machinery in San Francisco, for the exclusive manufacture, for the Pacific coast, for the term of five years, of all the machines made under his patents.

When it is considered that the grain-growers, west of the Rocky Mountains, are not one-fourth supplied with reaping machines, thus prolonging the cutting of the grain-crops till too ripe, involving the loss of much grain in consequence; acting also as an incentive to unnaturally fast driving, thus shaking the machine to pieces in a few years, and, of course, requiring a corresponding price for work performed; that, each year, large additions are made to the number of acres of grain to be harvested, and many worn-out machines must be replaced by new ones; it will be seen at once that there actually exists a large demand for manufactures of this kind, independent of the large and costly importations, each year, from the Atlantic States.

The Scientific American, on page 293, volume 12, while speaking of the value of agricultural machines, makes use of the following language:

"Statistics now before us of two well known reaping machines, give the total number of 22,485 constructed in six years, from 1851 to 1857. We have not been able to obtain exact information on the point, but we are confident that this does not constitute one-fifth of the total number manufactured. In the State of Illinois alone, more than twenty thousand, we have been told, were employed last harvest. In 1840, not an acre of prairie had been swept by the blade of a solitary reaper."

In view of the foregoing facts, and many others of like import, which might be adduced, parties proposing to construct these machines must state how many machines of each kind they are able to furnish per annum; and should two or more parties bid alike, the contract will be awarded to those having the largest facilities. Should these not equal the number of machines ordered by the Patentee, parties will be required to furnish them from other sources.

Castings, other than properly belonging to the engine, or boiler, or forming connections between them, to be let *by the pound*; boiler and engine, including steam and exhaust pipes, heater, fire-grates, and all other parts necessary to form a complete whole, to be let by *horsepower*; woodwork to be let by single machine, complete.

When it is remembered, that, when a reaping machine breaks down during harvest, it necessarily involves the still further ripening of the crop during repairs, which may cause a loss of considerable grain, and the wages and board of harvest help, in *addition* to the actual cost of repairs, it will readily be seen that a farmer may be involved, in a few years, in an expense equal to the first cost of the machine.

In order to remedy this defect, as applicable to the present machines, the inventor has made many and important changes in the *forms* of reaping machines; requiring less power, less strength of material, while still gaining additional stability in construction. In order that the cost for repairs done to any machine during the term of *fourteen years*, shall, in no one case (except in case of running away of team, or other accident, not properly chargeable to construction), equal the first cost of the machine, each party bidding for the contract must give good and sufficient bonds that the materials used in construction, shall be of the best quality, and the workmanship equal to any in the State.

Should the cost of manufactures on this coast be materially reduced within the specified time, then the prices of these machines to be reduced correspondingly; and at no time shall they cost more to the inventor, than the same could be procured for outside of this contract.

One thrashing machine and two reaping machines to be delivered in the city of Stockton on or before the *fifteenth day of May next*, complete and ready for use.

It has heretofore been customary for manufacturers to pay large sums of money to inventors for the exclusive privilege of constructing their machines, for specified portions of territory. In place of this demand, and considered equal to it by the inventor, he desires to make payment for those machines furnished this year, on the first day of October next ensuing, and machines furnished in subsequent years, on the fifteenth day of June for all the reapers, and the fifteenth day of October for all the thrashing machines.

Parties interested are invited to examine the models, now at the Main Street Hotel, Stockton, make their estimates, and submit their bids before Thursday, the twenty-fifth day of the present month.

Whatever exclusive privileges may be granted by the government of the United States, to the undersigned, by virtue of his inventions, he relinquishes all his right and title to the same, for all that portion of the territory of the United States lying *west* of the Rocky Mountains, to the parties to this contract, as security for the full and faithful performance, on his part, of whatever may be agreed upon.

In order that these inventions may be thoroughly tested, and their *real* value accurately determined during the coming harvest, the undersigned desires to place in the hands of the proper officers of the California State Agricultural Society, all his rights and exclusive privileges, to be granted him by the Government of the United States as aforesaid, by virtue of his inventions, to all that portion of the territory of the United States lying *east* of the Rocky Mountains, as security to the Public for the payment of the sum of *Ten Thousand Dollars* ($10,000 00) *as a competition prize* (open to thrashing and reaping machines), if claimed by virtue of successful competition, performed under the following conditions, namely: Any thirty-inch cylinder thrashing machine, or a larger one in proportion, which shall average for the season, *one bushel* of clean grain by weight, while the steam thrashing-machine averages *five bushels* of clean grain also by weight—using not more than *seventeen men* cook included, and *eight horses*, while the steam-thrasher uses *thirty men*, cook included, and *eight horses and engine*, or the equivalent in the same proportion for work done; and in order that the distances traveled, and number of moves made, shall be the same for both machines, they shall both set to the same stacks of grain, and continue thrashing till finished. In reference to time moving, it shall be considered as competition only between the hours of 6 o'clock A. M. and 6 P. M., resting two hours at noon; each party having the choice of position alternately, and in case of accident involving breakage of either machine, other than belts, the time such machine may be disabled shall be deducted from the general account, each party to sack, sew up, and weigh the grain fast as thrashed. Then the owner of such machine shall be entitled to receive out of the above sum, $5,000.

For the reaping machine he claims to save $1 50 for each and every acre of grain reaped, over any other reaping machine now in the State, when the competing machine has the choice of crop and ground suited to it; but where the undersigned has the same choice, he claims a much larger percentage; the gain to consist in grain, time, and team saved. The grain to be valued at 1¼ cents a pound; men at $2 50 a day, board included, and horses at $1 50 a day.

The owner of any machine demonstrating the above claim without foundation in fact, shall be entitled to receive the remaining $5000; provided that should both competitors be successful, they shall receive half the amount on 1st of October next, and the balance a year after.

Should but one machine be successful, the remaining half of the sum shall be held in trust for other and minor trials; but should *no* competitor be successful, then the undersigned shall be released from his bond, and the sum of $1000 annually shall be secured by another bond, to the Cal. State Ag. Society, for fourteen years, to be devoted to the cause of Progress and Science in Agriculture.

While the above claims are all he binds himself to substantiate, he yet feels himself able to claim much more with equal certainty of success. * * *

In connection with the reaping machine, it will be seen, that should the competing machine reap sixteen acres per day (a very general standard in this place for a good day's work), after deducting the cost of collecting, thrashing at seven cents per bushel, and sacking at twelve and a half cents, for the extra grain saved per acre, that the owner of said machine would actually be indebted in the sum of four dollars to the owner of the crop, for the *privilege of cutting it for nothing and bearing his own expenses.*

The absence of all risk to the competitor, in case of failure, together with the sum offered for his success, the undersigned trusts will insure a spirited contest by the persons most interested.

In order that the results shall be entirely reliable, and forever set at rest the obscure and uncertain conjectures and surmises relative to the positive cost in one form or other, of harvesting a crop of grain, and determine where the cost exists, together with all other subjects of a kindred nature connecting themselves remotely or directly with the economy of the results to be determined, he trusts that the Society will take such steps in the matter as will insure an extended scrutiny of the entire subject, and bring to light all its hidden secrets.

As this will involve considerable expense, and in case there should be no other means of meeting it suggest itself to the Society, he will pay to its fund on the first day of October the sum of one thousand dollars.

Should the determined results place the gain for the thrashing machine between seventy and ninety per cent, and for the reaper between fifty and eighty per cent (which is claimed), it will be seen that their combined influence at no distant day, may work very important changes in the social and political world. * * *

If the laws of motion, gravitation and inertia, are *capricious* only, and *changeable as the summer wind, certain* in nothing but *uncertainties*, and *regular* in nothing but *irregularities, then* the undersigned feels he may be disappointed in his hopes, and cut off from his anticipations; but if, on the contrary, they *are ever-acting, never-changing* in their operations, he has no fear for the result. WALTER MASTERTON.

STOCKTON, March 9th, 1858.

TO BUYERS OF MOWERS, REAPERS, AND THRASHERS.—Those Farmers who would wish to save the time and expense of visiting the City to purchase the above-named implements, can have all the needed information given them, and the Implements purchased and shipped by us to them. Our experience of the market and the character of the different machines will enable us to make these purchases to great advantage to buyers and save them much time, expense and labor.

AGRICULTURAL.

FIRST PREMIUM IMPLEMENTS.

TO THE FARMER

AND

Dealer in Agricultural Implements.

PLEASE READ.

HAVING erected a good shop, with facilities not heretofore possessed by any house in this State for manufacturing Agricultural Implements, I beg leave to announce that I am now prepared to receive orders to any extent in this line of business. I employ none but the best and most experienced mechanics, and use only the very best materials. In this way I hope to promote the interest of the good mechanic, the interest of the farmer, the interest of our young and growing Agricultural State; and at the same time that interest which is foremost with all mankind—self. I have had twenty years experience in the manufacturing business;

I ESTABLISHED THE FIRST SHOP,

AND

MADE THE FIRST STEEL PLOW

In the State of Wisconsin, in the dawn of her great agricultural improvement. I also

MADE THE FIRST REAPING AND MOWING MACHINE

AND

THE FIRST STEEL PLOW

Ever Made in this State;

Therefore, with my experience, and a knowledge of the wants of the country (which are different from most others), I feel confident that I can and will do much for the interests of the agriculturists of this county; and in my efforts I trust I shall meet with a good share of patronage from the farmer and all interested in this matter, and in the interest and development of the agricultural improvement of our State.

I design, and have under way, the manufacturing of

1,500 Cast Steel California Plows;

THE DEEP TILLER;

OR,

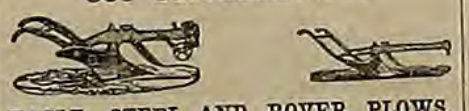
"QUEEN OF THE WEST;"

Of stock entirely superior to any ever worked before in this country. Also,

GANG PLOWS,
HARROWS,
CULTIVATORS,
FANN MILLS,
&c., &c., &c.

In addition to what I manufacture, I shall constantly be receiving implements from the best makers of the Eastern and Western States, amongst which are now due

500 CINCINNATI



EAGLE, STEEL AND ROVER PLOWS,

which stand, in point of true merit and worth, altogether higher than any others in the great agricultural State of Ohio.

☞ Please favor me with a call, and see for yourself, and be convinced that I am publishing no humbug, but simply facts as they are; and that your young State can, within itself, already provide the farmer with implements inferior to none now in use. All kinds of agricultural implements and machines repaired on short notice, and in the best manner, and on reasonable terms.

LAWTON OR NEW-ROCHELLE

BLACKBERRY PLANTS!!

PRICES REDUCED!

THE subscribers announce to their friends and customers that they have now

OVER SIX ACRES
OF THE
GENUINE LAWTON (or New-Rochelle)

BLACKBERRY PLANTS,

under cultivation, and in good condition.

They are therefore prepared to fill large orders the coming FALL and the next SPRING, at the following reduced prices:

One Thousand Plants	$125 00
One Hundred Plants	15 00
Fifty Plants	8 00
Two Dozen Plants	4 50
One Dozen Plants	2 50
One Half Dozen Plants	1 50

☞ Good Plants for setting, of a second size, will be sold for $100 per 1000 Plants, or $12 per 100 Plants.

N. B.—All Plants ordered of us will be taken up and packed with the greatest care, and under our own personal supervision.

Of the many thousands sent out by us last year, we have heard very few instances of failure, notwithstanding that they have been forwarded to *every part of the country, and to California, with perfect success*, and the setting out has often been entrusted to unskilful hands.

Printed directions for setting and cultivating are sent with every package. GEORGE SEYMOUR & CO.,

Ravenswood Fruit Garden

PLANTS.

WHOLESALE AND RETAIL.

Brinckle's Orange Raspberry,
$70 ₱ thousand, $8 ₱ hundred.

Col. Wilder Raspberry,	do	do
Cushing Raspberry,	do	do
Thunderer Raspberry,	do	do

Linnæus Rhubarb, $50 ₱ thousand, $8 ₱ hundred.

ALSO,

Blackberries: New Rochelle or Lawton, Newman's or Thornless, $15 ₱ hundred.

Strawberries: Hovey's Seedling, Boston Pine, Large Early Scarlet, $6 ₱ thousand, $1 ₱ hundred.

Currants: Black Naples and Cherry, $10 and $12 ₱ hundred.

ALL the above plants of best quality; we cultivate most of them for market fruits.

THE BRINCKLE'S ORANGE RASPBERRY, for market or garden, is considered the best of all Raspberries: is unequaled in flavor and beauty; flavor is rich and vinous; and color beautiful bright orange: a very vigorous grower; hardy and exceedingly prolific.

The Cushing and Col Wilder are the best for making jams, preserves, sirups, &c.

THE LINNÆUS RHUBARB is a new variety originated by Myatt of England, who also originated the Victoria, on which this is a great improvement in both *flavor* and *productiveness*.

Its flavor is deliciously aromatic and spirited, and it is entirely free from the toughness and stringiness which characterize the Victoria, but when cooked becomes a fine uniform pulp, like the most tender apple. The plant is a very strong grower, more productive than the Victoria, and very hardy.

We cultivate most of the above Fruits for market, and selected them from our Fruit Gardens, as the choicest varieties known. Brinckle's Orange Raspberry and Linnæus Rhubarb especially are of exceeding excellence.

Orders will be promptly attended to in the order in which they are received, and Plants packed in careful manner.

Terms cash. Bills payable on delivery of Plants to the agents, or order of the purchaser.

Our plants will be ready to ship any time between the first of November and first of April. Circulars with full description of varieties and testimonials, can be had at the office of the California Farmer, San Francisco.

[For the California Farmer.]

The Effects of Trees upon Adjacent Vegetation.

EDITORS FARMER: Regarding the degree of injury which an occasional and insulated tree does to the surrounding vegetation, there appears to be some diversity of opinion. In giving our views in this matter, we do no more than direct the attention of the farmer to certain well known laws, that relate to the subject.

On the difference in the capacity of the atmosphere to hold moisture, in proportion to the degree of its temperature, greatly depends the success of the farmer's occupation in this dry climate. That warm air, coming in contact with cool surfaces, deposits its moisture as well beneath a deeply stirred soil, during a warm day, as upon a cool pitcher, is one of the incontestible arguments for deep plowing. The sooner after sundown a soil will cool, the greater amount of moisture it will receive from the heated atmosphere during the night. Such cooling, as it most rapidly proceeds where the radiation of the heat is unobstructed, is, of course, retarded by reflection from the foliage and branches of a tree. The effect of the heat so retained is apparent in the earlier starting of vegetation in its vicinity; a pleasing but deceptive appearance, which has spared many a venerable oak from the murderous ax. Thus it is evident that the same law of radiation and reflection in operation between the soil and the tree, although it retards the escape of heat during the season of abundant moisture, and gives to vegetation a promising appearance at this time; yet, later, and during the season of abundant heat, by keeping up the temperature of the soil during the night, it cuts off the supply of moisture by the dew. The soil in the vicinity of an insulated tree is always the driest in the field, and the occasional and moving shade of its foliage contributes in no wise to keep the ground moist. That a low and constant shade will promote moisture, cannot be denied. Such a shade is afforded by the leaves of well advanced grain-plants; and the advantage of having such crops cover the ground early, is well known, as by such covering the soil will not, during the day, reach such a high temperature as if exposed, it will sooner in the evening be prepared to receive the moisture of the heated atmosphere, and when the shade is dense it will frequently, during the entire day, be kept at the dew point. But the high and moving shade of a tree can have no such constant effect, upon the temperature of the soil. The baneful effect of the shade itself, in preventing the full influence of the sun's rays, is well known and admitted.

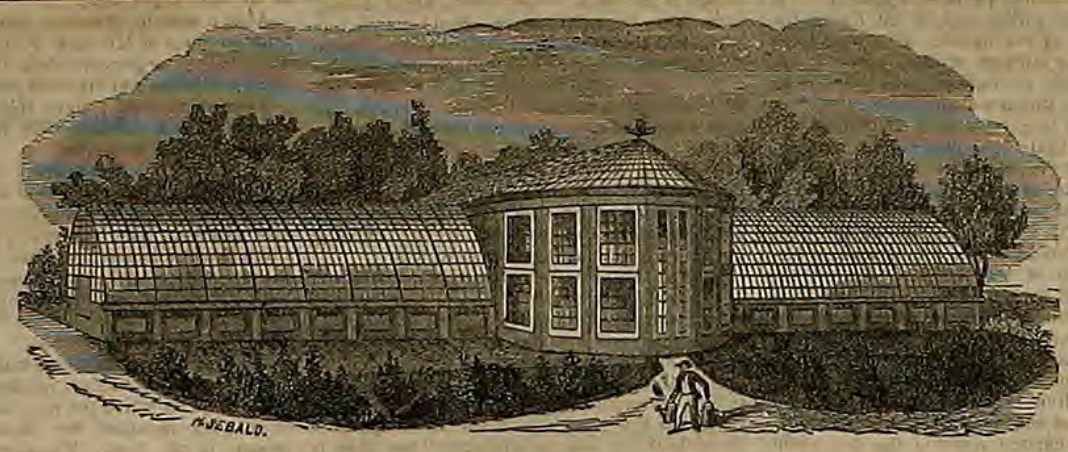
There is no more conclusive objection to the presence of trees among plants, than their functional interference. Consuming as they do, the like food from the soil and atmosphere, it must be evident, that unless the supply is greatly superabundant, such a share of nutriment as must be consumed by their extensive roots and foliage, must be sensibly impoverishing. The same experience which shows that trees will thrive better when plants are not cultivated about them, teaches that one is nourished at the expense of the other.

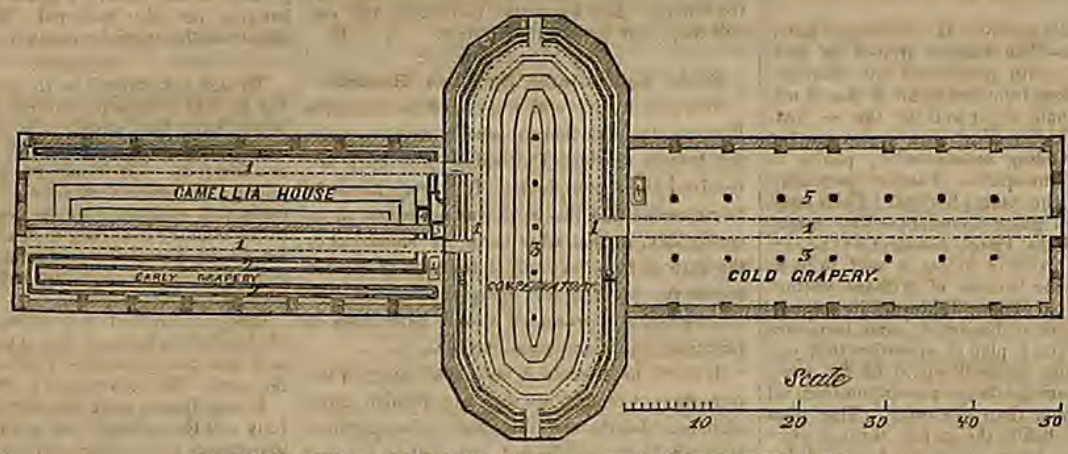
The atmosphere, according to De Sanssure, contains only 415-100,000 in volume of carbonic acid, from which all plants derive the greater part of their bulk; and as every leaf is an organ almost exclusively formed for its collection, it is reasonable to suppose that the masses of foliage presented by trees, would deprive the surrounding plants of a full supply of this important nutriment. Yet, as this gas is supplied by the atmosphere so constantly, and as other sources contribute to furnish it, we are not certain that the scattering trees of a field, would materially injure in this respect; but, that the ammonia existing in the air is denied to plants by the proximity of trees, we are satisfied. This highly volatile substance, as it exists in the atmosphere, can only be made available to plants, during our dry season, by its solution in the dew that falls upon their leaves; and that trees are injurious, by withholding this important nutriment, is proved by the fact that plants, as they contain the greatest proportion of nitrogen, an element derived from the ammonia, flourish least in their vicinity.

Then, particularly in a climate like ours, are even scattering trees positively injurious, and although by a bountiful supply of water by irrigation, and the application of ammoniacal manures, as in highly cultivated gardens, some plants may be made to thrive in their vicinity, to the grain cultivator their presence deducts considerably from the yield of his harvest, and particularly when moisture is scantily supplied by rain.

W. S.

ON THE CALAVERAS, March 19, 1858.





GREENHOUSES OF J. M'CALL, ESQ., STATEN ISLAND, N. Y.

Conservatory, Camellia-House and Grapery.

As the public taste is improving, and the desire of embellishing homes advances, our wealthy men will desire to beautify and adorn their grounds with Conservatories and Graperies; and that the best styles of architecture may be introduced, we have selected a design and ground-plan of one of those chaste structures that adorn the residence of dwellers in the Eastern States. This is one of the best designs, and was prepared, as will be seen, by Wm. Chorlton, Esq., author of the treatise on grapes. This plan was figured in the Horticulturist, as will be seen by a letter from Mr. C. to the editors, giving the particulars of the design, and its uses and conveniences. We give the letter as it appeared in that work, and hope ere long to see so excellent a design fully personified on the Pacific shores:

J. J. SMITH, ESQ.—DEAR SIR: Inclosed I send you a perspective view and ground-plan of a collection of horticultural houses, designed by myself, for J. McCall, Esq., Staten Island, and combining beauty of exterior with practical utility. In this case it was required to have an early and late grapery, a large and general conservatory, and a suitable apartment for camellias, and other polished-leaved greenhouse plants, which are subject to be scorched by the rays of midday sun. The most available site was on a level plot, so situated that the longitudinal extension of the structure should be east-southeast and west-northwest. It was also desirable that no part should appear as "sheds" or other like nuisance, consequently the ordinary conveniences are provided for by a cellar, forty feet long by nine feet wide, being sunk under the northwest part of the building, and which contains the two boilers and sufficient room for the winter's fuel. There are two cisterns, each fourteen feet wide by fourteen feet deep underground, and beneath the stage of the central house. Each house is furnished with a tank for tepid water, having a hose-coupling attached, with faucets so arranged, that one force-pump (which is fixed under the stage) answers all the purposes of drawing water from the cisterns into the tanks, or from any one of the tanks to shower over the whole or any part of the interior, at pleasure. The centre house is twenty-one feet wide by forty-six feet long, and seventeen feet from the ground level to the ridge. The two wings are fifty feet long by twenty feet wide, and fourteen feet to the ridges, which are on a level with the eaves where they join. The groundwork, making of borders, and planting, was executed by Mr. Nichol, the intelligent gardener, and from present appearances, future success is certain. The vines were one year old from the "eye," when planted, last March, and the greater part are now (August 11th) from twenty to twenty-five feet long, with proportionate strength of cane, and with good ripening, will be fully qualified to bear a light crop crop of fruit next year.

Most respectfully yours,

WM. CHORLTON.

News from Jack Frost among the Fruit Trees.

THE TRUE SPIRIT.—We are much gratified to receive the following letter. This manifests the *true spirit*, and a deep interest for that which benefits, blesses, and beautifies home. We trust others may follow the example of our lady correspondent, and when they shall go among the fruits and flowers, they will all find a better health, and a larger share of happiness. We gratefully acknowledge the kind compliments paid our journal. We will try to deserve still more. Lady, beautiful flowers shall blossom in your pathway; Flora will attend to that:

"OAK SHADE," March 23, 1858.

MESSRS. EDITORS: I noticed in the FARMER of last week, a request that you might have information from individuals residing in different parts of the State, in relation to the effect of the late severe weather upon fruit. The weather, for a number of days, here in Santa Clara Valley, was disagreeably cold and windy, some hail and snow, a little rain, clear at night, with heavy frost. One of our men came in with the intelligence that the peaches were showing the effects of the cold, in a few days after. I felt much concerned about the probable loss of such a blessing as I esteem fruit to be; especially where one has children, who crave it so much. As my husband is in San Francisco, as soon as the weather was pleasant enough, I went into the orchard, passed about through the trees, pulled of a number of blossoms from different trees as I passed, opened and examined them, found the little peach a good health color. I thanked Heaven our peaches were spared, if I am able to judge of their appearance. Our trees are so full, should we lose half we would have better ones to eat in the end. Doubtless many will fall off.

I take the the liberty of writing, because I wish the Little Pilgrim sent to my little boy Barton, also to my little girl Marian, separate, or in the same envelop. Suit yourself as to that. How can I send you the money, and how much for the two, and postage. If I can send it in a letter, it shall be forthcoming. Have you received dues for the FARMER? Please let me know.

And now, let me tell you, I am trying to have a few flowers here, where none have ever yet been reared. I have worked hard, for two days past, helping to arrange and inclose a place for them; but I fear I shall only be able to have annuals this year, but *all* flowers I love too well not to strive to have even the commonest, until I can get others. Yes, I love them all. Please pardon me for thus telling you of my employment, or what I love. But I will tell you still more. I love all that is good, all that is truthful, all that is useful, and all that is beautiful. All go to make life happy and desirable, and I know that you take an interest in many things that I love on the earth, even to employments. May you be prospered in your laudable exertions to disseminate useful knowledge.

Very respectfully, W. B. H.

BLOSSOMING OF FRUIT TREES.—We return thanks to our friends at Benicia for the following valuable memoranda. We earnestly hope that this will induce others, who may have taken memoranda of the opening blossoms, to forward it to us. Such information is of inestimable value. We should, in justice to this garden, state that it is one of the chief attractions at Benicia, being a garden containing many rare and beautiful plants, flowers, and fruits of rare excellence, and all in a high state of cultivation:

Capt. Walsh's Garden, Benicia.

Apples	"	March 18,	"
Pears	"	" 12,	"

Apricots as large as almonds March 20th.

New Grapes.

THE following remarks upon the "two new Grapes," the Concord and the Rebecca, we copy from the Committee's Reports of the Massachusetts Horticultural Society at Boston. This speaks well for these new Grapes, and we believe they will do admirably well in California. These were grown in open culture:

The Concord, so often spoken of heretofore, has ripened in many instances where the Isabella has failed. Mr. Bull has shown them in abundance, but few others have done so, probably for the reason that it has not been planted out a sufficient length of time to allow of a liberal show. Those shown by Mr. B. were large, both in bunch and berry, and few grapes prove more attractive than does the Concord, with its rich bloom overlaying every berry. It is a valuable acquisition, and Mr. B. is deserving of a liberal reward for his patient waiting, biding the time when the community will say he should be amply compensated for originating so valuable a grape.

The Rebecca has now become so popular for its early ripening, good qualities and hardiness, that if not already in the hands of most grape-growers, it soon will be. It is one of the most valuable grapes for out-door culture that has ever been introduced amongst us; and then, too, it is so easy of propagation, that in the hands of almost any person it can be multiplied *ad libitum*. A person procured one dozen vines in the autumn of 1856, and immediately commenced its propagation in earnest, as may be judged; for he assures us that from that dozen vines he should have potted and for sale, *three thousand* vines for the spring of 1858. We were glad to have such evidence of its readiness to propagate, believing that it should be in the hands of every one owing the smallest piece of ground.

Wine Manufacture.

The following on Wine-making in Massachusetts, we also copy from the Horticultural Society's Reports:

Native Wine.—At the solicitation of Messrs. E. Paige & Co., of Boston, a full Committee, with the addition of several horticulturists from a distance, then attending our Annual Exhibition, made a visit to their manufactory and wine vaults, under the City Reservoir, where they found, in the process of pressing, several tuns of native grapes; and were assured by Messrs. Paige & Co. that the whole amount they would make into wine this season would exceed sixty tuns, yielding over 20,000 gallons of wine. The grapes were mostly from our own State, though several lots were received from Connecticut. One person from Cape Cod supplied about eight tuns.

The space allowed us will not admit of our going into particulars; but we would call attention to the native grape as an object of profit, in many instances, since it can be grown in abundance, where it is planted by the side of a stone wall—the liberal price paid by Messrs. Paige & Co. affording compensation for the little care and labor required. As to the quality of the wine, although it was not of sufficient age to enable us to pronounce a positive opinion on it, some of our amateurs, who have had a more extensive acquaintance with other samples from the establishment of Messrs. Paige & Co., speak of it in terms of commendation. Messrs. P. & Co. have produced a brandy from the pulp and skins of the grape, after the juice had been expressed, which, according to the opinions of connoisseurs, is likely to become valuable for medicinal and other purposes.

Strawberries.

WE also present their Report on Strawberries, as it may be of great value to us here:

Last year the Committee awarded Isaac Fay the Lyman Plate, valued at fifty dollars, for his seedling called "Jenny Lind," being the best seedling strawberry, after a trial of three years. Mr. Fay had exhibited his strawberry for more than three years, but the Committee believed the spirit and meaning of the prospective prize offered was that the fruit should have been tested in regard to prolificness, hardiness, etc., and of this fact we could not have a true knowledge, except through its dissemination. One of the very best strawberries ever grown, Hovey's, was disseminated over the whole country, and there was but one opinion expressed of it; all were unanimous in its favor, and it was some ten years after originating it, that the Society awarded Messrs. Hovey the Society's Plate, valued at fifty dollars.

Though a fruit should have been in the hands of the originator a length of time, and it may be for his interest so to retain it, we do not believe the Society is called on for the fulfillment of its offer under the head of "Prospective Prizes," till the Committee is satisfied that it is the best, in all respects, for the time being. The Jenny Lind strawberry has been shown the past season by several persons, and it has been uniformly good, though the best shown this season was Sir Charles Napier, by Messrs. Hovey.

The Camellia Japonica.

AMONG all the most gorgeous and beautiful gems in fair Flora's realm none can surpass L' Camellia, and however much we have esteemed its beauties, and worshiped its loveliness, we have never seen it bloom to such perfection in any country as in this our adopted State, California. We have gazed for hours upon the finest blooms in England, in France, and in Belgium, as well as in various parts of the Union, yet, we are free to say, we have never seen such perfect blossoms in a group of the different kinds and colors as we saw, two weeks since, at Smith's Gardens, Sacramento. We have seen the grand collection at Walker's Garden, at O'Donnell's, and those of Sontag on the Mission road; but they were under glass, while those to which we now allude were grown at Smith's Gardens', out door culture, and we confess we were astonished and delighted. These had been grown, quite exposed, in a southwestern view, and for clean foliage, well-formed buds, and perfect blossoms, we never saw them excelled, although we have had a thousand blossoms open, in our own collection, within two weeks at a time, in former years, and have observed them closely. These facts, this blossoming of the Camellia, at Smith's, is a guarantee that the Camellia will flourish perfectly with us, as an ornamental tree, and we hope, in years to come, we shall have the pleasure to sit under the shade of this magnificent tree, and gaze upon its beauties.

We have feasted, the past week, upon *one bloom* of the Camellia, which came to us most unexpectedly from the collection to which we have referred (from Smith's Gardens). It was the bloom of the "Camellia Abby Wilder," and indeed it was a kindly act in the gardener there, Mr. O' Brien. That beautiful flower came home to our heart like as a precious friend comes to us suddenly, after long years of absence. It was one of our pet flowers; its pure white petals slightly tinged with vermillion, like the cheek of beauty when the heart was touched. Every petal of this flower was perfect, and very dear to us.

Ten years since we had the honor to introduce this noble flower, with its mate "Wilderii," into Europe, and we had not seen a flower of it since. The sight of it brought back, like the recalling of some beautiful dream, our visit there, and all the remembrances of glorious old England, of sunny, beautiful France, and the hours we spent so happily in other parts of Europe. It brought before us scenes of grand old castles, of cathedrals, of monuments, of parks, and gardens, and much, very much, that will always hang around memory's storehouse, for our heart to love and cherish; and all this by gazing upon *a single flower!*

To Mr. O'Brien, the skillful gardener at Smith's, we return a double share of thanks for this valued gift. We will gaze and gaze upon this flower, and love it always for the pleasing remembrances it has given us. For our next we have prepared a sketch of the Camellia, its history, culture, etc.

GREAT COUNTRY FOR THE LADIES.—The time for marriage in Sparta was fixed by statute—that of the men at thirty or thirty-five years; that of the women at twenty or a little younger. All men who continued unmarried were liable to prosecutions; all old bachelors were prohibited from being present at the public exercises of the Spartan maidens, and denied the usual respect and honors paid to the aged.

"Why should I give you place," cried a young man to an unmarried general, "when you have no child to give me place when I am old?" No marriage portions were given with any maiden, so that neither poverty should prevent a gallant, nor riches tempt him, to marry contrary to his inclinations. The parents of three children enjoyed considerable immunities; those with four paid no taxes—a regulation which all married men with large families will admit to be equitable. It was customary for the bridesmaid to cut all the bride's hair on the wedding-day, so that, for some time, at least, her personal attractions should increase with her years.—[Herodotus.

We suggest to the Legislature now in session a perusal of the above law of Sparta, and we confess ourselves in favor of some such law; for by the evidence before us we have scores of young men who *ought* to be punished in some way for neglecting a positive duty, and we have many who deserve to be placed on the honorary list of tax-payers. If the Legislature should pass this law, we should soon drive the bachelors and single men from us, or compel them to do their duty. We have some fears, however, that, owing to our *climate*, if such a law were passed the assessors would find a great many parents who had *four* children—or they would adopt them to avoid paying taxes. At all events, they would dodge taxes by getting married, and—live in hope.

Since the above was put in type we are glad to see the Legislature have thought of this matter.

[For the California Farmer.]

What Will Your Immigration Society do?

MESSRS. EDITORS: If the theory, that population will increase in a country, in proportion to the ability for sustaining families in comfort and health, be true, California is destined to become one of the most populous and thrifty States in the whole confederacy. Whether we regard the healthiness of her climate or the abundant and varied products of her soil, she stands forth in her youthful vigor, without a rival on this continent.

Within her domain may be produced all the necessaries and nearly all the luxuries of life, in the greatest profusion. From San Diego to the Northern boundary, from the Pacific coast to the Sierra's snowy summit. Every part produces more to sustain and render human life comfortable and happy, than any other equal space known to civilized man. In the southern portion you may have all the rich and rare tropical fruits that are found in Cuba or on the Isthmus with very few unimportant exceptions. Wine enough to supply the Union with its crowded millions of people can be produced there, and all the raisins the nation will need, or can consume can be easily grown and prepared for market. Limes, lemons and Oranges, Olives, Dates, Figs, Pomegranates, with care and experience in their culture, may be produced in sufficient quantities, to become an important and profitable branch of trade. It is said that Tobacco superior to that grown in the Southern States, or even in Cuba, can be easily raised in many parts of the State. Millions of acres of the Tulé lands will undoubtedly become the most profitable Rice fields in any country. The soil and climate are peculiarly adapted to the production of Cotton and Sugar-cane. The Sugar-beet grows more luxuriantly there, than in any other known locality. In no country can sheep or cattle be more easily raised or become more surely profitable. All the staple articles of agricultural products, it is well known, are cultivated with less labor and yield far more abundantly than in any other part of our country. The gold mines are inexhaustible. You are now working the richest quicksilver mines in the world. Coal, both hard and bituminous; marble, of many varieties, not known in any other State, are known to exist. Iron ore, salt, are abundant. Lead, silver and copper, in almost a pure state, have been found. In short, what great element of permanent wealth does not exist in your midst? Nothing, comparatively nothing, but intellect to explain, guide and control; bone, muscle and sinew, energy and perseverance, to secure from your vast resources, greater wealth and a more permanent and wide-spread happiness than has often fallen to the lot of any people. You have intellect there now, enough to marshal and lead forth, in the various industrial pursuits of life, a million of men, to competency and happiness. There is a sadness steals over my heart when I remember what you might be. When I consider your vast resources, your varied and inexhaustible mines of wealth, many of which are unsealed, and none of which have scarcely as yet been even prospected, and then contemplate the change that will come when thousands upon thousands of immigrants shall land upon your shores, and set about the great work of developing the immense wealth that abounds in all your borders, it is easy to see that the radiant path you there tread will lead you on to a world-wide fame and secure for you a renown more lasting than the gold and gems that sparkle in your golden placers.

Scarcely a beginning has been made, yet during the few years of your existence as a State, the small beginnings made have exerted a wide-spread and cheering influence all over the land. Your State and County Agricultural Societies, your Mechanical and Industrial Associations, though small in the beginning, even like the grain of mustard-seed, yet in less than five years, have taken deep root in your soil, and have already become great trees; under their wide-spreading branches, the energetic, the persevering, and hopeful, repose and are refreshed beneath their waving boughs. The fountains of wealth opened by their sturdy arms are gushing forth at their feet, and sparkling all round them. The music of their genial flow, is heard in the valley, on the plain, and swelling up the mountain side, filling the hearts of all with cheerful joy and hope. Those of you who attended the late Industrial Fairs in Stockton and San Francisco, know what gladness filled your hearts and what bright hopes of the future of your State were clustered round you. Amidst those brilliant displays of the products of your soil, and the skill of your mechanics, did not many regret that thousands from your own and other lands could not be there, to behold as well, and hope with you? and do you not still regret that you have so few to share your hopes and your rewards? If so much has been done in so short a time, with such a comparatively small number, if you had a million or more added to your number, as energetic, and persevering, as those now in your midst, what might you not hope for?

Your individual and collective wealth would be doubled every time your population was doubled. It is true many pretend to believe that there are too many people there now, and even some of the newspapers oppose any movement, made with a view to increase the population by immigration. Such editors may be wise and good men, but they certainly do not show it in taking such a course. It is respectfully suggested to such that it would be well for them to read again, some standard work on political economy, and re-examine some treatise on National Wealth. Let them study well the workings of the political, economical and industrial principles that govern the most prosperous States in the world, and then point out, if they can, any community, any State, or Nation, that has yet said that they had no wish for any further increase of the population by immigration of moral, industrious, sober, hard-working men, who would be producers, and not consumers merely. The producing classes may be considered the wealth of the country. The fact that a few, or many, may be temporarily out of employ, is no reason why there should be opposition raised against those who would in all probability give employment to the very men that are idle, and are *used* as an argument against any increase.

There are in this city now fifty thousand men and women out of employ, but it is not probable that any intelligent man has ever thought that New York was too large, but on the contrary all are glad that some eighty or a hundred thousand persons are annually added to our number, and yet we say come, to all who are willing to add something to the individual and aggregate wealth of the city. It is almost universally conceded that the *great* want of California is more population. In every department of commercial enterprise, in all the channels of trade, in every industrial pursuit, this want has been, and still is apparent; prominently, painfully apparent. Yet California is the garden-spot of the Union, the pride and glory of the nation. If it were filled with one or two millions of such people as are now here, it would be impossible to estimate its real value to the Union and the world.

You need this large increase of population, you must have it. Again I would ask what your Immigration Society is doing in the matter? Why is it that so many of the Associations formed in California for the purpose of benefiting the State, have done so little? It is not known here that any efficient action has been commenced, to further the objects of this Society. Permit me again to suggest, to one and all who have high hopes for the brilliant future of your glorious State, the primary importance of spreading the knowledge of your natural advantages before the masses in this country and Europe. Having access to papers from every part of our Union, I am unable to find much reliable information in any except the current news of the day, about California.

You will usually see about the following: Later from California.—The steamer arrived in New York yesterday, with passengers and treasure, and brings advices from California to the — ult, from Panama and Aspinwall to the — inst. Business brisk in San Francisco, money market easy; mines yielding satisfactorily; plenty of rain; miners in fine spirits. Farmers preparing to plant seed for the coming harvest. Flour easy, beef plenty, wild game abundant.—They might as well add: Adams' Pacific Museum, at the corner of Clay and Kearny streets, is said to be in full blast, drawing crowds of brilliant visitors every night. You, Messrs. Editors, will remember that the writer of this article, some two years ago, laid before you a plan of operation that you and many friends believed would be far more effectual in securing a large population from all parts of the Union than any other. That plan in part was laid before the public through your columns, in the spring and summer of 1856. Much study has been devoted to the subject since, and at some future period the whole plan, with its details, may be laid before those most interested.

Much greater interest has been felt in this matter since it has been known that Capt. Randall's new line of splendid steamers would assuredly go into operation. The immigration movement and this line must go hand in hand. It is true many persons believe the line to be a myth, and flatter themselves that it can never be started. Whose fault is it that it has not been started before this time? Since the publication of the first article in your paper in October, 1856, Californians have paid to the old companies enough to build four such steamers as will be put on this line, and yet seem to feel that you cannot build them. I here re-affirm what I have already said in your paper, *they will be built just as surely as the sun shines*. Whether they are to be built by California capital, and the profits accruing from them go into the pockets of Californians, they alone must determine. The question is not, *can* they, or *shall* they be built? but shall it be done with California, or foreign capital, and, when they commence their regular trips, the Star of the Golden State will wheel higher and higher, and flame with an increasing brilliancy, and its beams fall upon many hearts in far distant lands, cheering them with hope and gladness. It is with this, or any other line that will carry as safely and quickly, and at low rates, that the Immigration Society should act, for the interest of each will be best promoted by benefiting the State. Let the living tide of immigration once fairly set in, and it will be difficult to turn it aside until your waste places are cultivated, and your deserts blossom as the rose.

Suppose that ten thousand families were to settle in the southern portion of your State, who fully understood the culture of the grape, and the manufacture of wine, preparing olives, raisins, and figs for market, and also the other tropical fruits growing there. Within two years from the present time, it is estimated, three hundred thousand persons will leave France and Germany for America, and the larger part of them acquainted with grape culture in their native land. Who can estimate the value of such a population to your State? It has been stated, in many influential papers, that there will be many millions of wealth brought by these immigrants, as they are mostly farmers and mechanics, in good circumstances, who, in consequence of the unsatisfactory state of things in the political world there, prefer to leave their native land, and seek a home in the new world. Should you not make a strong effort to secure a large portion of this advance guard of the mighty army that is to follow? There will also be a large proportion of farmers among them, bringing money enough to buy lands, fence, and improve them, erect comfortable homes, stock their farms and pay ready cash. Several millions of dollars thus carried to your land, and expended on improvements which will be permanent, and of far greater value to the State than the money expended.

Artisans and mechanics will come by thousands, many of the most skillful in the world, and distribute themselves, as their tastes or interests may prompt, in the cities, towns, and villages, or country. Silk weavers from France may set up their looms and weave the choicest fabrics from native silk. From the sugar-cane and the beet, you can grow, within ten years from the present time, all that will be required for the whole Union. It can be refined there, and shipped here, at a lower figure than it can be done by Cuba, and still yield a larger profit than they can who ship from Havana.

The extent of your Tulé lands will enable you to become the successful competitors for supplying the rice markets of the world. Hemp and flax, equal to any produced in Russia or Ireland, can be grown in greater abundance there, and consequently much cheaper than in either of those countries.

It is said, by intelligent men, if you can produce fifty or even forty bushels of wheat to the acre, that you can ship it to Liverpool, or any European market, undersell those sending from Illinois and the wheat-growing States of the West, and still leave a much wider margin for profit than they could hope for. From your proximity to Mexico and Central America, you can procure the green hides, tan them, and regulate, at least, if not control, the leather market on this continent. This will not necessarily require a very large capital.

Neither Egypt or Italy contains finer marble than California, or in greater variety. This will yet form a very extended and profitable branch of industry on the Pacific coast.

When all these industrial pursuits are in full operation, railroads will be required at many points now little dreamed of, to transport these products of the soil and industry to market. The accumulation and surplus capital of the people will build these roads in every direction, from the coast to the eastern boundary of the State, from north to south, and stretch the electric wires in a perfect network through every county, town, and village in the State. The profits, alone, arising from these various sources, would enrich any State, and enable the producer the more economically to send these varied products to market.

It is said that California and Oregon pay $5,000,000 per annum for tobacco. You can then raise enough of that article to keep that snug sum among yourselves, and supply all creation, with half a dozen added to it besides. So with cotton and wool. In less than a quarter of a century the humming spindles, and the flying shuttles, will be heard in the city and country, cheering you onward in your career of greatness.

In short, every branch of human industry will be pursued, every channel of trade explored, and every commercial enterprise pushed forward with all the vigor and energies of a mighty people. One entire generation may pass away before all these things are realized, but, if you *wish it and will it*, ten years hence it will be done, and before California sees twenty years she would be really the richest and most enterprising of any State in the Union. Act wisely for yourselves, and you will reap your reward in due time. B.

State Agricultural Society's Reports.

WE present herewith a series of the Society's Reports, through their several Committees, for the benefit of those Cultivators who have not received their pamphlets. It is very much to be regretted that this work was not issued at an earlier day, so that what facts are embraced in the various Reports could have been of service before the planting had again commenced, that the hints here presented would have been of practical utility the present year.

It is to be regretted, also, that many of the important Committees did not furnish more elaborate details, and that those who exhibited their products, should not have felt an interest sufficient to have furnished to the several Committees all those interesting details upon cultivation that would have accomplished great good.

There are, also, many subjects which should have been illustrated, so as to present the most important matter in a pleasing and instructive form. There were many articles reported upon which do not appear in the work, and several exhibitors' names, and some of value, which do not appear at all, and this omission, will, of course, cause many regrets.

We hope and believe that, in future years, improvements can be made in issuing such a work, so that it shall reflect the highest credit upon our State, and go out free from any objections.

The Reports, however, will awaken a still greater interest in the cause of Agriculture:

GRAINS, &c.

Your committee having performed the duty assigned to them, beg leave to report as follows:

WHEAT.

First premium, for best ten acres, to Mr. John Grattan, of San Joaquin county.

Mr. Grattan's certificates show a yield of four hundred and eighty-seven and a half bushels on ten acres of land, and although, like all the grain crop in the country, slightly affected by the drought in early spring, is large in the berry, well cleaned, and free from foul seed.

The sample shown is Chile, slightly mixed with Australia and club head.

Mr. Grattan further states, that "this grain was raised on the low, black loam, on the Calaveras meadows. This ground was plowed by the middle of January, about six inches deep; sowed down and harrowed in, by harrowing four times; seeded 20th January. Part of this grain was eaten out twice by the worm, and resowed, first on February 5th, and lastly on the 20th of March. This caused the crop to fall at least fifty per cent short of what the yield would have been had it not been disturbed by the worm."

A fine sample of wheat is shown by Mr. Richard Wall, of San Joaquin: Chile, mixed with club head; plump, and well cleaned.

A sample of Mexican wheat, raised in Contra Costa, by Messrs. Lohze Brothers. Reported yield, "forty-five bushels, of sixty-seven pounds to the bushel, to the acre." Quality and berry very fine.

Also, samples of wheat, in the head, are shown by Messrs. Charles Ashley, Sallin & Butler, Dr. Grattan, Starkweather Brothers, C. J. Leach, J. Smythe, and Cooper & Overheiser, all of San Joaquin county, from the region adjoining the Calaveras river; and all of superior wheat.

Also, a fine sample of wheat from Mr. Ernest Wagner, of Stanislaus county.

Fine specimens of the "Mummy," or Egyptian wheat, are shown by Messrs. J. Days, S. Williams, and Starkweather Brothers, all of San Joaquin. Also, Maj. Bidwell, of Butte.

BARLEY.

First premium, best ten acres, to Mr. C. J. Leach, of San Joaquin. Mr. Leach's certificates show a yield of eight hundred and seventy bushels on ten acres of land. The grain bright, handsome and well cleaned. This also, affected by the spring drought. Mode of cultivation not communicated.

Your committee notice an extra fine sample of barley, from the farm of Ernest Wagner, of Stanislaus river, the heads of which measured seven inches in length.

The committee regret not having more particulars in reference to this barley, its yield per acre, and time of planting. We recommend a special premium to Mr. Wagner.

Also, fine samples of barley in the head, from Messrs. Smythe and Starkweather, San Joaquin.

Also, a sample of "Bald" barley, from the farm of Mr. Smythe.

RYE, IN THE HEAD.

A sample of rye, from Ernest Lodtman, San Joaquin. This rye is extra well filled, and large head. We award him a diploma, for the best sample of rye shown.

Also, a sample of rye from Ernest Wagner, Stanislaus; and a sample from Messrs. Wiley & Woods, of San Joaquin.

OATS.

Messrs. Long & Co., Alameda, show a beautiful sample of oats, from Pennsylvania seed, from late planting. As these parties have imported a seed which is evidently of excellent quality, we award a diploma.

Messrs. Wiley & Woods, of San Joaquin, show a sample of oats in the sheaf. Heads moderately heavy; straw, six and a half feet.

CORN.

First premium to Dr. L. G. Lyons, of Ione Valley. Shows beautiful samples of heavy and well rowed white corn, yielding, to quote the language of the accompanying certificate, "one hundred and nine bushels, of fifty-two pounds to the bushel, per acre."

Also, a sample of yellow "gourd-seed" corn, from the farm of Mr. A. F. Potter, of Ione Valley, yielding, as per certificate, "one eighty-four and a half bushels, of fifty-two pounds, per acre."

Your committee believe this to be the best sample of corn offered. We therefore recommend a special premium.

POTATOES.

The only lot entered is that of T. B. Parker, of Mokelumne river. The potatoes are of excellent quality. The reported yield is twenty-three hundred bushels per acre, but, as the evidences accompanying are loose and informal, your committee can only recommend a special premium.

ONIONS.

Mr. S. C. Tyler, of Georgiana Slough, shows a fine sample of onions, apparently from Australia seed, on which the reported average yield is fifty-six thousand two hundred and fifty pounds to the acre. The documents accompanying are also informal. Your committee recommend a special premium.

GRASSES.

Though not strictly in the schedule pertaining to this committee, we call attention to the particularly fine sample of California "Timothy," grown on the farm of Mr. M. Williams, of San Joaquin. The heads are large, heavy and plump; the stalks very sweet. The sample affords full evidence that the grasses indigenous to the country have only to be noticed and cared for, to fill a want in California agriculture becoming each year more imperative. We recommend a special premium.

Also, a sample of wild clover, from the farm of Jacob Haeflich, of San Joaquin, five and a half feet in length, and which cut four tons to the acre. We recommend a special premium.

In conclusion, your committee would respectfully call the attention of grain growers to the importance of sending samples of grain grown in different localities to the Annual Fairs, accompanied with statements of quality of seed sown, time of sowing, and depth of planting and plowing. The accumulation of such facts would, in a few years, afford data which would go far toward lessening the hazards of grain production, as well as make evident the particular localities on which the greatest reliance may be placed for the production of certain crops.

And they would also remind grain growers and competitors for premiums, that to obtain premiums or satisfactory notice of their productions, something more is necessary than the mere entry of a bag or sample of grain, with a label of owner's name attached. It should be accompanied with its history, the source from which the seed has been obtained, and its length of time in the country, as well as the method of culture, and preparation of soil and seed.

J. W. OSBORN, Sonoma county,
Col. GEO. HAGAR, San Joaquin,
S. WILLIAMS, San Joaquin,
S. T. NYE, San Joaquin, } Committee.

NATIVE OILS, SIRUPS, DRUGS, CHEMICALS, &c.

The committee to whom was referred the duty of examining native hops, oils, extracts, essences, sirups, drugs, chemicals, pharmaceutical preparations, etc., would most respectfully submit the following report:

We have examined every article on exhibition, within our province, critically and carefully.

The first article your committee examined was a sample of tomato alcohol, partaking of the flavor of the fruit, but of very little strength; probably not more than from thirty-five to forty per cent above proof. We think that a higher proof alcohol can be obtained from this garden vegetable.

We next examined a sample of rose-water. This article the committee deemed of very indifferent quality.

The next article examined was a sample of alcohol derived from the pear. It is an excellent article, about seventy-five per cent above proof. We could not find any name or number attached to the above articles, but believe them to be from one exhibitor; and as this is using products cheap and abundant, and therefore producing articles of greater value, by home industry, we therefore, to encourage and stimulate all such attempts, award to the exhibitor a diploma, especially for the last named article.

Hops were the next thing examined. To lot marked 23, a large and beautiful article, we award the first premium. To J. A. Hobart.

Next in order, we examined a jar of sal soda, beautifully crystalized, and as fine as any we ever saw. As this is an article in very common use, and as its manufacture should be encouraged, we award to its exhibitors a diploma.

Glass jar of powdered sage, exhibited by Dr. S. M. McLean, is of very fine quality and flavor; and as all articles of this kind are better the more recent their growth, and as thousands of dollars are sent annually to the Atlantic States for this one article alone, and wishing to do all that can be done to encourage its growth, we award to Dr. McLean a diploma.

We next examined a fine article of American saffron, Stockton growth, exhibited by Mr. S. H. Debnam.

Pharmaceutical preparations, chemicals, etc., from Little & Co., San Francisco, consisting of preparations of iron and quinine, amylime, pepsine, iodine of ethyle, glycerine, cod-liver oil, with quinine, sirup of iodine of iron, sirup of squill, chloroform, pills of the citrate of iron and quinine, and bay water. In regard to the last-named article, we would state that it is manufactured from the native bay leaf, and although it is a very good article, it would be better if its extreme pungency could be somewhat lessened. To Little & Co., for general neatness and beauty of style of pharmaceutical preparations, etc., we award a framed diploma.

A sample of brandy and alcohol, obtained from the beet root, came next under the notice of the committee. The brandy is low proof, very fine, and palatable, and we believe that, as a medical agent, it will prove to be as tonic for the use of the sick as any kind or grade of brandy known. The alcohol is ninety-five per cent above proof, as strong as it can ever be imported; colorless, and fine in every respect. This is the best alcohol exhibited, and we award to Mr. Delessert, of San Francisco, a framed diploma.

We examined a collection of chemicals, pharmaceutical preparations, etc., from Dr. Lauszweert, San Francisco, consisting of powdered manganese, from native oxyd of manganese; crystalized sulphate of manganese, from the same; extracts, sirups, wines, tinctures of the canchalagua, a native medicinal plant; also samples of the plant; lozenges, made from the solid ingredients of the justly celebrated Napa Springs; chloride of lime made from the common limestone of the State; tincture, extracts and powder of the huaco plant, tested in San Francisco in August last, and declared to be an infallible remedy for the cure of the bite of the rattlesnake; cinnabar, from the quicksilver mines; a beautiful sample of American vermilion, manufactured from the same; also some fine specimens of crystalized cinnabar, and California flea powder. To Dr. Lauszweert, for his fine collection of chemical and pharmaceutical preparations, we award a framed diploma.

A fine sample of flax seed, exhibited by Mr. Thomas Edwards, of Sacramento; the only sample on exhibition, and for which he obtained a premium in 1855.

Last of all, we examined a few of the principal preparations of the Turner Brothers, and Barbier sirups, wines, bitters and casences, and we would award to the Turner Brothers the first premium, and to Barbier the second premium, for a fine exhibit of goods above mentioned.

We are aware that the articles presented, of indigenous plants and medicines, are fewer and much less important than should have been brought forward. The attention of botanists and pharmaceutists can scarcely be said to have been directed to the development of the virtues of our native medicinal plants and minerals, and few authenticated experiments have been mentioned, or samples presented.

It can scarcely be doubted that, among the thousands of indigenous plants and minerals, there are many possessing healing powers unknown to the world.

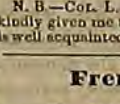
A boundless field is therefore open to enterprising philanthropists to experiment, not only for the amelioration of human suffering, but for enrolling their names among the benefactors of mankind. And we suggest and hope, that not only physicians and druggists, but other citizens, in various parts of the State, will institute experiments of untested plants and minerals on the inferior animals, so that another year will show such an array of native medicines, of ascertained virtues, as will not only be flattering and gratifying to all Californians, but will claim the respect and admiration of other portions of the civilized world.

All which is respectfully submitted.

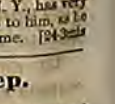
J. L. POLHEMUS,
S. H. DEBNAM,
G. W. WOOLLEY, M. D., } Committee.

FARM STOCK, ETC.

FARMERS OF CALIFORNIA!



I AM Breeding Thorough-bred **Ayrshire Cattle; Merino, Southdown,** and **Cotswold Sheep; Suffolk and Chester White Hogs,**



Of which I will sell and deliver per steamer in Cincinnati, at the following prices:

AYRSHIRE CATTLE	$75 to $200 each.
MERINO SHEEP	$15 to $30 "
SOUTHDOWN do	$20 to $50 "
COTSWOLD do	$20 to $50 "
SUFFOLK PIGS, ₱ pair	$25 to $40

THE CHILD OF JAMES MELVILLE.

[The following touching poem, which will be read by many with tears, was written by Mrs. A. Stuart Menteath, a Scottish lady, and author of "Lays of the Kirk and Covenant." It commemorates the death of James Melville's child, which occurred in Scotland nearly three hundred years ago. In Melville's "Autobiography," in the place where he narrates the circumstances of his child's death, he says, "This page, if thou be a pater (parent-father) that reads it, thou will spardone me; if nocht, suspend thy censure till thou be a father, as said the grave Lacedæmonian Agesilaus."—INDEPENDENT.]

One time—my soul was pierced as with a sword—
Contending still with men untaught and wild—
When He who to the prophet lent his gourd,
Gave me the solace of a pleasant child!

A summer gift—my precious flower was given—
A very sunny fragrance was its life;
Its clear eye soothed me as the blue of heaven,
When home I turned—a weary man of strife!

With unformed laughter—musically sweet—
How soon the wakening babe would meet my kiss;
With outstretched arms its care-wrought father greet—
Oh! in the desert, what a spring was this?

A few short months it blossomed near my heart—
A few short months—else toilsome all, and sad;
But that home solace nerved me for my part,
And of the babe I was exceeding glad!

Alas! my pretty bud, scarce formed, was dying—
(The prophet's gourd—it withered in a night!)
And He who gave me all—my heart's pulse trying—
Took gently home the child of my delight!

Not rudely culled—not suddenly it perished—
But gradual faded from our love away!
As if, still, secret dews, its life that cherished,
Were drop by drop withheld—and day by day!

My blessed Master saved me from repining,
So tenderly He sued me for His own—
So beautiful He made my babe's declining—
Its dying blessed me as its birth had done!

And daily to my board at noon and even,
Our fading flower I bade his mother bring,
That we might commune—of our rest in Heaven;
Gazing the while on death—without its sting!

And of the ransom for that baby paid—
So very sweet at times our converse seemed,
That the sure truth—of grief a gladness made—
Our little lamb—by God's own Lamb redeemed!

There were two milk-white doves my wife had nourished,
And I too loved, erewhile, at times to stand—
Marking how each the other fondly cherished—
And fed them from my baby's dimpled hand!

So tame they grew—that to his cradle flying—
Full oft they cooed him to his noontide rest;
And to the murmurs of his sleep replying,
Crept gently in, and nestled in his breast!

'Twas a fair sight—the snow-pale infant sleeping,
So fondly guardianed by those creatures mild;
Watch o'er his closed eyes—their bright eyes keeping—
Wondrous the love betwixt the birds and child!

Still, as he sickened, seemed the doves, too, dwining—
Forsook their food, and loathed their pretty play;
And on the day he died—with sad note pining,
One gentle bird would not be frayed away!

His mother found it—when she rose, sad-hearted,
At early dawn—with sense of nearing ill;
And when, at last, the little spirit parted,
The dove died too—as if of its heart chill!

The other flew to meet my sad home riding,
As with a human sorrow in its coo;
To my dead child—and its dead mate then guiding,
Most pitifully plained—and parted too!

'Twas my first "hansel" and "propine" to Heaven!
And as I laid my darling 'neath the sod—
Precious his comforts—once an infant given—
And offered with two turtle-doves to God!

YOUNG MEN.—I love to look upon a young man. There is a hidden potency concealed within his breast which charms and pains me. I silently ask: What will that youth accomplish in after life? Will he take rank with the benefactors or scourgers of his race? Will he exhibit the patriotic virtues of Hampton and Washington, or the selfish craftiness of Benedict Arnold? If he have genius will he consecrate it, like Milton and Montgomery, to humanity and religion; or like Moore and Byron, to the polluted altars of passion? If he have mercantile skill, will he employ it like Astor, to gratify his lust of wealth, or to elevate and bless humanity, like some of our merchant princes. If the gift of eloquence be hidden in his undeveloped soul, will he use it like Summerfield in favor of religion, or like Patrick Henry or Adams, in battling for human rights; or will he for mammon's sake, prostitute that gift to the use of tyranny and infidelity? Will that immortal soul, which beams with intelligence and power in his countenance, ally itself with its Creator and thus rise to the sublime hight of destiny; or will it wage war with truth and duty, or thus sink to degradation and death? As I rise these great queries, I at once do reverence to the high potentiality of his nature, and tremble for his fate.—[Daniel Wise.

GOOD TEMPER AND GOOD COOKING.—A correspondent of the Ohio Cultivator has a fancy that the quality of a meal depends very much upon the state of the cook's temper. Hear him: "It is astonishing how much the cheerfulness of a wife contributes to the happiness of home. We remember hearing a husband say that he could gauge the temper of his wife by the quality of her cooking; good temper even influenced the seasoning of her soups, and the lightness and delicacy of her pastry. When ill temper pervades, the pepper is dashed in as a cloud, perchance the top of a pepper box is included as a kind of diminutive thunder-bolt; the salt is all in lumps, and the spices seem to betake themselves all to one spot in the puddings, as if dreading the frowing face above them. If there be a husband who could abuse the smiles of a really good-tempered wife, we should like to look at him! Among the elements of domestic happiness, the amiability of the wife and mother is of the utmost importance; it is one of the best securities for the Happiness of Home."

CHARLEY GREEN is alive still. Read the following, from the Boston Evening Post, and you have proof of it:

Pontius Pilate not Dead yet.—When Mrs. B., the actress, was making a summer excursion in the country, she was accompanied by her husband, and a party of his and her friends. One of these was a Mr. ——, formerly a pilot on the Boston station, who had laughed and grown fat so long that he had become, like Wolsey, "a man of unbounded stomach." Some one asked, "Who is this large man in Mrs. B.'s suite?" "That," said his informant, "is Mr. ——; he is a pilot." "Exactly," was the response, "I should think he was—pauncheous Pilate!"

HORTICULTURAL.

STOCKTON-RANCH NURSERY.

Almaden Road, between San José and Santa Clara.

50,000 FRUIT TREES.

50,000 NURSERY TREES of the VERY CHOICEST Varieties, of the most important kinds of Fruit, raised under the personal care of the subscribers.

The Varieties consist of Apple, Pear, Plum, Cherry, Peach, Apricot, Nectarine, and all the needed kinds of fruit trees for the Orchard and Private Garden.

The undersigned having had the experience of years in England, and many years in the Nursery of Hovey & Co. of Massachusetts, need only say that they can warrant Trees to be what they are represented, and that they have taken pains to offer as choice a collection as can be be found in the State.

Purchasers are invited to visit the Nursery, as they may rest assured the quality of the Trees and the price will be sure to suit.

☞ C. W. LECOUNT, of San Francisco, is our only Agent. (23) B. S. FOX & CO.

SANTA CLARA NURSERY.

Half a Mile West of Santa Clara, on the San Francisco Road.

The Proprietor of this extensive and well-known Nursery, informs the public that he has for sale this winter, a large and very choice stock of the very best varieties of

FRUIT TREES, VINES AND PLANTS.

Consisting in part of
3,000 two year old Apples;
12,000 one year old Apples;
2,500 one year old Pear, on Pear stock;
2,500 one and two year old Cherry.

Besides a large stock of

PEACH, PLUM, APRICOT AND NECTARINE TREES.

Also a lot of

Fig Trees, Raspberries,
Currants, Gooseberries,
and about 20,000 *Grape Vines.*

500 lbs. China Sugar-Cane Seed,
At $1 25 per Pound;

One pound and a-half being a great plenty to seed one acre of ground.

The Proprietor will sell his Trees, Bushes and Vines as low as any other responsible nursery in the country. His stock is taken wholly from trees which have borne fruit in California, and is therefore known and reliable.

☞ All orders will be promptly attended to. The expense of packing and freight will be charged to the purchaser. Terms cash.

L. A. GOULD, Proprietor.
Santa Clara, Nov. 24, 1857. v7-22 3m

COMMERCIAL NURSERY, SAN JOSE.

THE Proprietors of this old-established Nursery are now prepared to furnish to their friends and patrons the

Largest and Most Select Collection of

FRUIT, SHADE, AND ORNAMENTAL TREES, VINES, &c.,

ever offered in this State,

At Reduced Prices!

The FRUIT TREES offered by us are all grown and worked in the Nursery by us, from varieties obtained from the celebrated MOUNT HOPE NURSERIES, o Rochester, most of which we have fruited in our Orchards, and offer for sale only such varieties as we have found to be best adapted to this climate.

We have in Nursery:

25,000 APPLE TREES, of two years' growth, large size, thrifty, fine heads.
10,000 One year from graft.
1,000 Three years' growth, extra large, fine Trees, suitable for planting in yards and gardens, and such as cannot be obtained in any other Nursery in the State.
2,000 PEAR TREES on Pear stocks, one and two years' growth.
2,000 Pear, on Anglers' Quince, one year from bud.
3,000 CHERRY TREES, of twenty-five best varieties.
5,000 PEACH, of twenty varieties, one year from bud.
1,000 PLUM, of twenty best selected varieties.
APRICOTS, six varieties.
NECTARINE, SOFT-SHELLED ALMOND, &c. &c
10,000 GRAPE VINES, Los Angeles, 1, 2 and 3 years' old.
3,000 Catawba, Isabella, Sweetwater, and foreign varieties.
GOOSEBERRY, STRAWBERRY, RASPBERRY, CURRANTS, &c., &c.

Catalogues can be obtained on application at the Nursery, by mail or otherwise

All orders from a distance carefully attended to, securely packed and shipped to any part of the State, at the risk of the purchaser.

Our terms are cash, or short credit, on approved notes, on delivery of the Trees at the Nursery.

Explicit directions for marking and shipping should accompany each order, and when particular varieties are wanted, state whether and to what extent others may be substituted, in case the varieties cannot be furnished. Persons trusting to us to select varieties may rely upon being furnished with the leading sorts, and proper proportion for each season.

New Treatise on Land Surveying.

JUST PUBLISHED BY

E. C. & J. BIDDLE,

PHILADELPHIA.

A Treatise on Surveying, by S. Alsop. In this work, the theory is plainly and comprehensively presented; directions for practice are given definitely and precisely; and everything which an extensive business in Land Surveying would be likely to require is embraced. Price per copy, mailed to California, $2 postage included. Price of the KEY to the work, mailed to California, 75 cents.

E. C. & J. B. also publish the following popular educational works, and many others extensively used in the Schools and Colleges of our country: and they would respectfully invite School Directors and Teachers to send for a copy of the descriptive catalogue of their publications:

Crittenden's Treatise on Book-keeping. The series comprises the four volumes below named, and for each of them a KEY, and a set of miniature BLANK BOOKS for the exercises:
1. Treatise on Single Entry Book-keeping.
2. On Single and Double Entry, for Common Schools.
3. do do do for High Schools.
4. do do do for the Counting House.
The volumes are severally the text-books in Commercial Colleges in Boston, New York, Philadelphia, Cincinnati, Chicago, St. Louis, Louisville, etc.; in most of the Normal Schools, and a great number of the High Schools of our country in the Public Grammar and Evening Schools of Philadelphia, etc.; while as a book of reference for practical accountants the Counting House edition is, undoubtedly, the most popular work on the Science of Accounts, published in the United States.

Cleveland's English Literature. *Twenty-fifth Thousand just published.* 1. CLEVELAND'S COMPENDIUM OF ENGLISH LITERATURE, from the 14th to close of 18th century: chronologically arranged: consisting of Biographical Sketches of the Authors, and selections from their works, together with Notes explanatory, etc. 2. CLEVELAND'S ENGLISH LITERATURE OF THE NINETEENTH CENTURY. A sequel to the "Compendium"; arranged on the same plan as it. The above two volumes are text-books in many of the Colleges, in the principal Normal Schools, and in a large number of other first-class Seminaries of our country; and they may with confidence be recommended as an admirable guide or chart for private students of English literature.

Cleveland's American Literature. *Cleveland's Compendium of American Literature,* on the same plan as the author's "Compendium of English Literature," will be published early next year.

Harrison on the Rise, Progress, and Present Structure of the English Language.

The Works of Thomas Dick, LL. D. 10 vols. 12mo. Few books are better adapted for the School or the Family Library, than the works of Dr. Dick.

Arboretum et Fruticetum Britannicum

abridged,

With engravings of nearly all the species.

Adapted for the use of Nurserymen, Gardeners and Foresters.

By J. C. LOUDON, F.L.S. H.S. &c.,
Conductor of the Gardener's Magazine, &c.

One copy of the above valuable work just received and for sale at the California Farmer office. 10

MAGAZINES, ETC.

THE "HORTICULTURIST" AND Journal of Rural Art and Rural Taste.

(Commenced by the late celebrated A. J. DOWNING.)

Conducted by J. JAY SMITH, Editor of the North American Sylva.

THE increasing love of Rural Life has brought this popular publication into extended notice. Its success has been amply proved by a large addition of readers, and it is now offered to public patronage with confidence. It embraces in its scope of subjects everything pertaining to the country and country-pursuits, and aims to instruct while it amuses: it is, in short, as now conducted, a popular RURAL MAGAZINE, designed to interest all lovers of the Garden, the Country-house, the Cottage, no less than the Botanist, the admirer of the Green-house, Conservatory, Grape-house, Fruit Cultivator and Planter. Its correspondents are those who have long devoted their energies to these pursuits, and it is believed the number of these, and the information they impart, is greater than any other periodical can boast of either in Europe or America. Indeed, the work has become indispensable to the well-informed country-dweller, who, by a perusal of its varied pages, may maintain an acquaintance with all that is passing in the fruit-garden and orchard, the nursery, the villa, and with the beautiful in nature, whether it is improved by art or adorned by taste. In its Rural Magazine character it is addressed to all who love information, and it has thus become a welcome guest both in town and country. Its circulation now embraces the entire Union and Canada, and endeavors are constantly used to increase its attractions by a liberal outlay in embellishing it with costly engravings of fruit, dwellings, trees, and those numberless rustic adornments which make the individual home attractive.

A NEW VOLUME (13th year) commences with the January number for 1858: and it will be the constant aim to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style, each number containg 48 pages, embellished with a frontispiece and several other original and well-executed engravings. The volumes, taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature. As an advertising medium it has few superiors.

TERMS—Two Dollars a year; Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the Art. Price, $3.

☞ All subscriptions must be addressed to the Agents, or to ROBERT PEARSALL SMITH,
Nos. 17, 19, and 21 Minor street, Philadelphia.

The California Farmer.

SAN FRANCISCO, FRIDAY, MARCH 26, 1858.

Immigration.

We are most assuredly pleased to note the interest manifested by all classes in our community for the cause of immigration. *It is the question now*, and we hope and trust that the mercantile and manufacturing interests will see that they, as well as the agricultural and mechanical, must base all their *future* prosperity upon some wise plan of immigration, that can be carried on to a successful issue.

An old Californian, S. C. Bradshaw, Esq., of the Family Grocery house of Bradshaw & Co., has located himself in Boston, to aid in the immigration cause, and we give place to his card, from the Boston Traveler:

Emigration to California.—Persons, with or without families, who are desirous to go to California, can now have a chance, provided a suitable number can be procured to go. It is proposed to charter a clipper ship capable of carrying from 150 to 200 persons; start about 15th of March. Good physician and nurse will be provided, as it is hoped more than one-half will be females. Persons going will please send their address to Merchant, Traveler office.

As the ship will go out under the superintendence of the California Emigration Society, places will be assigned to mechanics and others, upon their arrival in San Francisco. Price of passage will be nearly mutual. 100 dollars or less. Larger the number, less the price.

Mr. Bradshaw has taken office, No. 28 Joy's Building, where he will be happy to furnish information to all interested. He is so well and favorably known to our citizens here, and in the East, that we trust all who feel interested will aid him, in every way possible, to build up our State.

In addition to the above, we have received the following communication from one of our subscribers, whose suggestions we most heartily approve, of course, for we have already presented both subjects, and, in this week's issue, we present the data from Benicia of the blossoming of the various fruits there. We trust other orchardists will send us a full account of the time of blossoming of the various fruits, and also of their ripening, and we shall be very grateful to all, if they will give us meteorological tables.

The proposition of our friend, made for Legislative action, is worthy of special notice, and we hope and believe our Legislature will act upon it. It is, in fact, the same plan to which we have often called public attention—the establishment of a Board of Agriculture; and to this all such matters could be referred:

—

Messrs Editors: Reading B.'s interesting article, headed "What of the Immigration Society," has reminded me to call the attention of those interested in the prosperity of our State, to a subject which, I think, will not only benefit the people of the State, by making them better acquainted with the peculiarities of its different sections; but, by showing the advantages of its climate, will induce persons to immigrate here from other parts of the world, and enable them to choose the part of this State that will best suit them for a future residence, before leaving their present home; so that on their arrival here they will be saved the time, trouble, and expense now necessary to find the section that will suit them best, in a country where there is so much room for choice. The subject alluded to is persuading of the Agricultural, Immigration, or some other society (perhaps the legislature might consider it worthy of notice), to employ one or more persons in each county, and, where necessary, in different parts of the same county, to keep a diary of the weather, amount of rain that falls, &c., with the time of blossoming and ripening of different kinds of fruits; also, any and every other remark that would tend to make strangers better acquainted with the country; each person so employed to be furnished with suitable instruments; and such diaries to be collected at the end of each year, by a suitable committee, and by them reviewed, bound, and distributed in different parts of the world, as the Patent Office Report is now done; or what would be perhaps better, let each person thus employed send in a weekly copy of his diary to an editor, who shall publish it in his newspaper; from this it would be likely to reach more hands than by being published in a book.

Delaware.

Oakland, Alameda County, March 21, 1858.

State Agricultural Society.

A meeting of the Executive Committee of the State Agricultural Society was held at Sacramento, the present week, to hasten the work of preparation for the Fair. We learn they have made great headway, and will soon issue their Circular for Premiums, etc. Among other resolutions passed, were the following, which we rejoice to see:

Whereas, This Board has learned that Hon. Justin S. Morrill, of Vermont, has introduced into the House of Representatives of the United States, a bill for the endowment and maintenance of a College in each State and Territory of the Union, by donating to each State and Territory a portion of the public lands, which College shall be devoted to instruction in such branches of education as pertain to Agriculture, Mechanic Arts and Natural History;

Resolved, That in the opinion of this Board, the passage of said bill, or one similar in its provisions, would greatly enhance the welfare of the whole country; and that we do, in the name of the Society we represent, earnestly request the Representatives and Senators in Congress from this State to use their influence to secure the progress of said bill.

Loss of a Fine Horse.—The large English stallion known as Peacock, owned by S. P. Woodward, Esq., died very suddenly on Thursday last, at a ranch on the San José road. The animal was very valuable, the owner having refused $5000 for him a few days previous to his death; he valued him at $6000. The loss of such an animal is a public loss.

Sather & Church.

"It is an evil wind that blows no good." The loss of the fine clipper ship "Flying Dutchman" sends to the depths of the sea much more than a hundred thousand dollars in value of California products. Yet it is no loss to our State; it is, in fact, a gain—a great gain, and peculiarly so at this very period of time. It will be remembered that Messrs. Moore & Folger, of this city, one of our most enterprising firms, loaded that ship, and consigned the cargo to the Messrs. Willetts & Co., of New York. Against their large shipment they had drawn for some $87,000, and these drafts had been negotiated with Messrs. Sather & Church. During the late panic at the East the house of Willetts & Co. suspended; the drafts were returned, and the consequence was it aided in carrying down the banking house of Sather & Church here, and also causing the house of Moore & Folger to suspend. Since that time Messrs. M. & F. have resumed their business in a most honorable manner, and the affairs of Sather & Church have been continuing brighter and brighter, until the announcement of the loss of this clipper. This calamity, as it is called, this shipwreck of a fine clipper and the loss of her cargo will prove a blessing to Messrs. Sather & Church, and also to Messrs. Moore & Folger, for we learn that the cargo was insured for $100,000; and thus a grand wholesale trade is made at once—the *cash* will be promptly realized, and thus Messrs. Moore & Folger can adjust many matters speedily; and this also will enable Messrs. Sather & Church to *complete* what they have so very honorably commenced—the payment of all dues; and thus again scatter through the community many sums of money that will advantage all.

It is anticipated that, this work so honorably consummated, Messrs. Sather & Church will again open their banking house, when, beyond any question, they will find a "host of business friends" ready to congratulate them upon their good fortune. It must be a source of great gratification for them to know that, amid their severe trials, no word of censure, no doubt of their integrity has ever been uttered; and thus are they rewarded.

We see also that although the ship was thrown ashore for awhile, she will be afloat again, and, even in the heavy loss that has occurred by the wreck of the "Flying Dutchman," this will bring back the gold to our own State, and accomplish great good.

Sold Again.

"'Tis strange, 'tis passing strange, 'tis wonderful."

Ike Walton's Grandson sends us a communication of much interest to *some* folks, and as there is an old adage, which reads something like this:

Let those laugh that win;

we were smiling over a *streak* of fortune that came across our path, when the article was handed us, and we give it place, for others who can relish a joke: —

THE BAIT TOOK.

Editors Farmer: In my younger days I used to be fond of angling, and much of my spare time was devoted to handling the rod. I have been much amused, when fishing for *small fish*, in noticing their (to them) foolish actions; for after a well-baited hook had been dropped among them several times, they would become so greedy that you might drop the bare hook, and they would snap at it so suddenly that you could land several of them before they discovered the bait was missing, or that, they were biting at nothing but a piece of metal. I have been reminded of this experience by the course of certain journals that are so ready to snap at any imperfections they imagine they discover in the Farmer.

It seems some *rash* individual chose to select some lines from the production of a well-known writer, for publication, changing them slightly to suit his own views, for reasons of his own. Nothing was added to imply that the lines were original, nor was it expected any one would take them to be so. Yet it seems the journals in question, were so greedy for something to snap at, that they swallowed the bare hook, sinker and all, and now may be leisurely hauled up on the bank, to squirm and gasp, while repenting of their folly. Ike Walton's Grandson.

Illustrated Photographs.—We do love pictures, especially beautiful pictures; and we have seen one to-day that we think is beautiful. We do not praise it because it was so very wonderful, but because it was true to nature, and in our estimation that makes it beautiful. The picture to which we allude we saw in the gallery of Selleck, on Clay street; it is called "The Two Friends." The picture is a photograph by Selleck; a sketch of a boy and his dog. The boy has been playing with his hoop, and becoming wearied, has thrown himself upon the grass to rest; his faithful "Tray" lies beside him. It is indeed a most truthful picture. The figures were painted by S. W. Shaw, the landscape by T. A. Ayers. This picture alone is worthy a special visit to Selleck's.

Where's that Ram?—We gave notice some little time since of the loss of a splendid Ram, the property of Samuel Brannan, Esq., that very mysteriously disappeared from his Ranch on the Feather river, some weeks since. As it is pretty conclusive he did not commit suicide by jumping into the river, it is *guessed* somebody has been anxious to improve their stock by borrowing him, as he would be called an estray wandering from his fold. As this famous Buck is so well known, being of the full-blood Merino (and having immense horns that had been cut off to prevent their growing into his head), he cannot be mistaken, and if seen anywhere on "Uncle Sam's [U. S.] farm, we hope we can have a hint of it.

Sure to Win.

The Atheneum.—The second number of this magazine of literature has been received by us, and we heartily rejoice to see positive evidences of a successful march to the goal of excellence and of triumph. Heralded to our shores as it was by severe criticism, it was brought into a more immediate public notice. Like the bird of lofty flight soaring high, attention was called to it by the screams of those "birds of prey" that ever stand ready to attack those who soar above them.

The Atheneum will make its mark upon the Literature of the Pacific coast, and it will be a shining mark too. Already it has raised its noble standard, and as its waving banner floats upon the breeze that comes to woo it with its welcome breath, we see inscribed in "golden letters"—Liberal Encouragement to California Literature. The word has gone forth—the offering has been made, and the Atheneum has become the pioneer for a generous encouragement to California writers. We are aware that offers have been made heretofore by other journals, but none in a form of such magnitude as is now proposed, and proposed too by the lady editress of the Atheneum. We wait with much patience to see how our brothers of the Era, Wide West, and the Magazine will respond. We would hope that each will say "Amen," and join their noble proposition. We do not see how they can refuse! What! refuse a proposition to *advance* the Literature of California!—and made by a lady too? No, they cannot. We hope to announce in our next that the gage thus gracefully thrown by the lady of the Atheneum to those journals, will be accepted with true knightly courtesy, and that hereafter the only strife shall be to see *which shall excel*.

The lady editress, in the excellent leader "Our Reviewers Reviewed," when defending the duty which she had assumed by entering the arena of Literature as an editress, says:

Still, the duty that pointed out to us the field in which we are now laboring, was not less imperative. When in the face of God and man we took upon us the name that we now bear, we felt that not alone were we to be the light and comfort of home, but that it was no less our duty to go out in the world with him who had chosen us, as a helpmate and a fellow-worker. We knew we had some strength of purpose—some willingness to bear our portion of life's heavy trials; and we felt that could we for one moment shrink from the encounter, we were unworthy the name of wife—unworthy the name whose dignity and honor we might assist in maintaining. Besides, we had illustrious examples to inspire us. Mrs. Ann S. Stephens, a lady whose name is dear to Americans, had not considered it improper to edit a paper; Grace Greenwood, another sweet songstress and most estimable lady, had pursued with honor the same avocation; Mrs. Osgood had not been criticised on account of her connection with the literary press. And so we might name many other shining lights of our sex whose names are as household words to the American people, and who have given character to American literature in other lands—ladies whose lives and talents have been consecrated to this one noble purpose of providing intellectual food for the world.

Were we presumptuous in striving to emulate such examples as these? What though we came among this people a stranger? Is Literature the inhabitant of any one land? Is she so exclusively Californian that none but a native-born can hope to win her? No! she was born in Greece. She grew up among the heroes of old Rome. She gladdened with her smile the Galic scholars and the German bards. She sate down by the hearthstones of England. She walked among old Scotia's hills, and by her smiles she lit their peaks with glory. She scorned not the humble homes of Erin; she looked on the peasant's cot and made it sacred forever. She came over with the Pilgrims, and dwelt with them in the wilderness. She flew to the mountains of California, and beguiled the miner at his toils. She owns no country—her home is the world!

Again:

The secret of the causes of the opposition which we are receiving from a portion of our city press, is not difficult of solution. The field in which they gain a scanty subsistence is bare enough—is crowded enough—is poor enough in its harvest, at best, to make them jealous of new gleaners. Hence, in looking after their bread and butter, they deny us a crumb! But there are some plants which thrive best on stony soil; aye, the seed blown by a passing gale to some remote rock in the wilderness, takes root in the scant mold, and springs up at last to a giant tree. And even thus—we write calmly and not with enthusiasm—our poor little bantling, The Atheneum, kicked and cuffed about by its big brothers, shall take root in the heart of this community, and grow up to a place and a position here. We have said it. A woman's will is potential—this paper shall succeed!

With such sentiments, who can doubt the success of the Atheneum? We repeat our earest belief: it is truly deserving the patronage of every family in California, and it is "sure to win."

Home Literature.

Most happy are we to know that in a State like ours, where more books, magazines, pamphlets, "yellow-covered literature," and newspapers, are published, purchased and read, than in any other corner of the world among any people of like numbers, that amid this great mass an effort is now making to elevate the standard of our literature, and to offer noble and generous rewards to our own writers. We go for "home manufactures," always, in preference, but we must import until we can produce our own, and it is to this point we labor. We desire to awaken the true spirit everywhere, and we rejoice to know that in literature a new day is dawning, by the advent of the "Atheneum," the new magazine of literature just cast into our midst like a newly-discovered plant, we are most happy to know comes a plan by which a noble fund can be raised of *eight thousand dollars*, to be distributed in prizes among our own writers; and the noble offer is proffered to prominent journals in this city to join in the work. We must consider the thing as settled, for the offer is made by a lady, and we do not see how it is possible for any gentleman to decline.

The whole plan is presented in No. 2 of the Atheneum, which we would publish, if our space would admit.

He has Left Us.

"Friendship is not a plant of hasty growth;
Though planted in esteem's deep fixed soil,
The gradual culture of kind intercourse
Must bring it to perfection."

"——— Thou art the friend,
To whom the shadows of long years extend."

Who can write the history of friendship? who can tell its trials? Friends have been made in California, and friends have been lost; friends have met, and friends have been called to part. Every steamer that comes to our shores, and every steamer that leaves us, makes its mark upon the pages of some heart's history. The last steamer that came brought back many who had been absent longer or shorter periods, and here they found friends ready to welcome them with joy. The last steamer that left our shores took away many whose going caused the tears of those that loved them to flow freely, for at such a time who can read the future? This absence may be for a season, or it "may be forever;" and the best feelings of the heart must be awakened at parting.

Among those who left in the last steamer was one who was endeared to the hearts of many, many warm friends. His departure has left a void that cannot be easily filled, and as we write we should feel we were not true to our own nature did not the eye moisten as we write his name, for he has been, in every sense of the word, a true and manly friend.

The last steamer register of passengers bears the name of John S. Shanks, a native of Scotia's fair hills. Mr. S. has been a typo on the Farmer over *four years*—from the very first issue of our journal—and has been with us, until a recent illness, through eight volumes. At the preparation and issue of every number he has been ever on duty, and as we look back over this long period of time, we can say not one unpleasant word or feeling has ever arisen to mar the past. With him and his associates we have labored earnestly and most happily, and a nobler, truer man than our friend who has left us, rarely is found. Among all his brethren of the typos he can claim true and warm friends, and his departure has caused many a tear and many a sorrowful heart. As we look around our office, that for years has been cheered by his cheerful presence, we see him not—his kindly greeting comes not, and the heart only can tell how we miss him.

He left in the hope to regain his health, which has suddenly and rapidly failed for a few months. On the day of departure his friends took their farewell of him, and many a true heart spoke only by the eye the sorrow felt at parting; for time nor distance can ever separate true friends.

Go, brother, go! o'er distant sea;
Though far from us, thou still shall be
Remembered well and constantly.

Thy manly form, thy spirit true,
Will oft be brought before our view,
As planets from the azure blue.

But, brother, whatsoe'er thy lot,
By friends thou'll never be forgot,
While memory holds one sacred spot.

Great God, too Thee we give our friend;
Oh, guard him to his journey's end,
And from him quick "good tidings" send.

In faith we trust him unto Thee,
As one we love most worthily.

Oh, bear him safe to distant land,
Where troops of friends shall ready stand,
To welcome him with heart and hand;

And when he treads the distant shore,
Give to him health, as once before,
And ne'er let sickness touch him more.

Then unto Thee for lengthened days
Our hearts with gratitude will raise,
Great God, to Thee a song of praise.

To Our Readers and Correspondents. The admirable and important letter of our most excellent correspondent B., will be read by all with pleasure; and we sincerely hope his suggestion will be heeded.

We commence a series of Reports, from the State Agricultural Document, which will furnish much information.

Aunt Bessie's Story, by her namesake, will find many friends. We shall give the conclusion next week.

Rural life, by our valued correspondent Sallie, cannot fail to win attention to a country life.

"Rena's" voice will reach the hearts of her many true friends. "We shall meet again," and in peace and prosperity, will be the response of the true-hearted.

"Agricola" came to hand just as we were going to press, and will appear next week.

Soltero, and manuscript from Queen Bess, Ad Valorem, Mary Glen, and much other copy is deferred till next issue. Will Ad Valorem send his name.

The fable of "Our Dog Caro and the Two Curs," accepted. By a hasty glance over the manuscript, we think it will afford a "right smart chance" of amusement.

Musical Entertainment, number four, by M. A. Sarles, Esq., will appear in our next.

J. B. M. received—accepted. J. W. also, and will appear.

To H. E. S., by Edith Montressor, will appear in our next.

The Musical Festival.—We return thanks for cards to the Musical Festival and Soiree of the Sansome Hook and Ladder Company No. 3, to be held at the Pavilion, on Wednesday next, the 31st, at 8½ o'clock, PM. From the acknowledged taste of the members of this Company, we are confident it will be one of the happiest affairs of the season; and we mistake our guess if the active preparations now going on do not entice a host to attend. They will be sure to "Hook" the fairest and best, and the result will be they will mount high up in the "Ladder" of fame for their effort.

A Word for our Agents.—E. B. Davidson, at Sacramento, will be happy to see his friends, and show them his new stock of books. He has every paper of note in the State, and many from abroad. He has the Farmer, and will be glad to receive subscriptions for us. Go, friends, and subscribe.

New Advertisements.—We ask especial attention to the following important advertisements which appear this week:

Pumps for Irrigation, by T. S. Paxson, Esq. These implements are important, and for every farm-ranch or stock-ranch, water, water, is the thing; and Mr. Paxson has every variety of pump known.

Paint your Houses.—Oliver and Buckley, dealers in Paints, Oils, &c., should receive the attention of every farmer and owner of a building. Paint your houses and save them from the drying effects of our climate.

Farmers, make your own Grain-Bags.—Every farmer can save money by having a Sewing Machine. Make your own bags for grain, and small bags for seeds; and also make your own working clothes. "A stitch in time saves nine." If you are a bachelor, you want one; if a married man, your wife wants one, for then she can make what she pleases. See a new card to-day of Singer's Sewing Machines, Geo. H. Dunnell, Esq., agent, 171 Washington street. Money saved is better than money earned.

Where do you buy your Tea? See East India Tea Company's card.

"*A new Broom sweeps clean.*—See cards of the Messrs. Armes, and J. A. Wolf. Get you arms full of new brooms, and then you can face the Wolf, and see which wins the battle.

Visitors at the State Agricultural Society's Rooms.—O. C. Wheeler, Esq., at the Rooms, will be glad to receive visitors and show them the plans of the State Society, for advancing the prosperity of the State. Our friends can see a file of the Farmer at the Rooms. Mr. Wheeler is our Agent, and we ask our friends to call and see the Rooms and subscribe for our journal. We are satisfied *they* will be as great a gainer as ourselves, if they enroll themselves.

Venerable Mistakes.

A Newer and Better Philosophy.—We honor the man who is not afraid to denounce those privileged errors in which the world for centuries has tacitly acquiesced, and is bold enough to advance and advocate a newer and truer theory which the slaves of precedent may choose to call heresy. Such a man is Thomas Holloway, the Medical Revolutionist of our age. His system of medical treatment is his own. It is based on new principles; it has been perfected by research, experiment, and observation; it is pre-eminently successful. The wonderful results produced by his Pills in all the varieties of internal disease, and the no less astonishing effects of his Ointment in external disorders, are notorious in this country and throughout the globe. We have had many opportunities of witnessing the rapidity and completeness with which ulcerous complaints are subdued or rather extirpated, by the combined action of the Ointment and the Pills. These two great specifics seem reciprocally to assist each other in the cure of this class of diseases. Many practitioners are afraid to undertake the healing of a sore leg, or a deep-seated abcess; the reduction of a wen or a tumor. Well they may be, for with the exception of Holloway's, all the methods of treating these forms of disease are wholly superficial. But he refers them, primarily, to a vitiated condition of the blood, and attacks the poison thrown into the circulation by the secretive organs, at its fountain head, the *stomach* and *liver*. While the Pills are acting upon these organs and upon the fluids they eliminate, he applies the Ointment to the outlets of disease on the surface, and strikes at the external inflammation and decomposition through the pores. Thus the ulcer, sore, abcess, tumor, or cancer, is subjected to a double assault from within and without. To use a military phrase, it is completely invested; its supply of poison from the interior is cut off, and the virus already circulating in the exterior vessels is neutralized. This being done, the morbid action ceases, and the cure is safely and radically accomplished. The philosophy upon which his practice is based is sound; its results always salutary.—[Liverpool Journal.

How Much Information?

THE Market Reports which appear in the papers of the day, are looked to as a source of information and guide. Now we ask, in all candor, *how much* information can be derived as to *price*, from the custom of marking p. t., or private? The mere announcement of a sale of such a parcel of goods on p. t. (private terms), may be the *trick* of a trader, to create a demand, but it cannot aid one as to the value of the article, surely; and no one can suppose that business men *report* all their sales. They would be unwise to do so; if their plans of speculation were to be exposed by it, they would give favorable items; but if they have a stock with a falling market, then there are facts they might give to save others from loss—but then it *must* be p. t. terms.

In the Times, of Wednesday, we notice in a list of *thirteen* articles there are *eight* marked p. t. Now, how much light from such a source of information? Better not quote, say we, unless the *whole* facts of the case are given. We repeat these p. t. terms are ominous of *pretty ticklish terms.*

INTERNATIONAL HOTEL.—This house is prosperously winning its way to fortune. We learn that Mr. Haley has taken the whole suite of rooms next the Hotel, over Hughes' piano rooms, and this adds some of the finest family rooms in the city. The bar has also been removed from the house, and great improvements otherwise. Onward, is the word with Haley.

OXYGENATED BITTERS.—For the cure of Dyspepsia and General Debility, this medicine is invaluable; its peculiar combination is the result of experience, and an intimate knowledge of the cause of these diseases.

HOLLOWAY'S PILLS.—Are you feeble in body incapable of exertion, dull, languid, and despondingly, yet unable to explain the cause? Be assured that it exists in the stomach and the secretive organs, and that a course of this purifying and invigorating remedy will restore your strength, activity, and cheerfulness, and recruit all your energies.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

LAWRENCE & HOUSEWORTH,

OPTICIANS,

SINGER'S

SEWING MACHINE.

JOHN H. DUNNELL, Agent,
171 Washington street,....SAN FRANCISCO.

ALL who want a Sewing Machine for *service*, not show, a machine *easily learned, easily operated, never out of order*, which sews *any fabric, fine or coarse*—*needle, cloth, or leather*; making a stitch *alike on both sides*, and using *cotton, linen, and silk thread*, will do well to look at our machine. It will do all we claim for it.

We have testimonials from all parts of the country, and from parties who have used other well-known machines, and discarded them for ours.

Our **Family Machine** is the most elegant one in use.

Circulars will be sent on application.

Our Machine is in more extensive use, for general manufacturing, than any other. v9-11 3m

---

THE CHESS TOURNAMENT.—This noble game has won a triumph never before accorded to a gathering of the kind. The largest number of contestants ever enrolled at one time have been booked for this tournament. Twenty-three tables are occupied, and the hall presents a scene of deep and abiding interest; day and evening players are surrounded by lookers on, and much information can be gained by a visit there. Great credit is due to the gentlemen who arranged this movement, and we trust they will be completely successful.

SPECIAL NOTICES.

☞ **GOUPIL & CO.**, Publishers and Importers of ENGRAVINGS, Manufacturers and Dealers in ARTISTS' MATERIALS of every description, 366 Broadway, New York, have constantly on hand a great variety of the above-named articles

*** Catalogues sent per mail to all parts of the United States. v9-2

☞ **Wigs! Wigs!! Wigs!!! — BATCHELOR'S WIGS AND TOUPEES** surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.

v8-13 1y 233 Broadway, New York.

☞ **THORBURN'S Preliminary Wholesale** CATALOGUE OF VEGETABLE SEEDS, *of the present year's growth*, will be published on the 20TH JULY, and will be mailed to Dealers and others requiring Seeds in quantities, inclosing stamps for return postage.

J. M. THORBURN & CO.,
19-tf 15 John street, New York.

☞ **Farm Stock.**—Having completed our arrangements for the importation of choice stock, we are now prepared to receive orders for any of the following breeds, and would call the attention of those in want, to our unsurpassed facilities for the importation and improvement of the choicest stock:

Thorough-bred Devon Cattle,		French Merino	do
Shorthorns	do	Spanish do	do
Thorough-bred Ayrshire	do	Cotswold do	do
Suffolk and Essex Pigs.		Chester White Hogs.	

Webb Southdown Sheep.

Fancy Fowls—all the best varieties.

All communications addressed to us will receive immediate attention, and we shall be happy to correspond with any and all upon the subject. Address

WARREN & CO., Cal. Farmer Office.

2

☞ **REGISTRY OF STOCK.**—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.

☞ J. Q. A. Warren, just from the East, will be happy to see all interested in the subject, at the FARMER Office. January 8, '58.

☞ **A. W. FABER'S LEAD PENCILS.**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct, 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not failed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York."

E. FABER, Sole Agent
v9-1 6m 133 William street, New York.

☞ **A Syllogism!—**

PROPOSITION 1st.

Every Lady and Gentleman desires a beautiful head of Hair.

PROPOSITION 2d.

The use of **LYON'S KATHAIRON**, will, without fail, produce such an one.

THEREFORE:

Every Lady and Gentleman will, of course, immediately commence using Lyon's Kathairon. All pronounce the Kathairon to be the finest and most agreeable preparation for the Hair ever made.

Its immense sale—nearly 1,000,000 bottles per year—attests its universal popularity. Sold everywhere for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.

PARE & WHITE, Wholesale Dealers,
11 1m *San Francisco, California.*

☞ **Efficacy of the Oxygenated Bitters.**—From J. C. Dunn, Esq., late City Treasurer:

BOSTON, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say I have received more speedy and effectual relief from the use of the *Oxygenated Bitters*, procured from you, *than from all others remedies*, and most cheerfully recommend them to all who suffer from a similar affliction.

Yours truly, JAMES C. DUNN.

Numerous certificates have been received from citizens of the highest respectability. Every dyspeptic will be amply repaid for a trial of this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 9-1m

---

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**

Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of

WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

HOTEL INTERNATIONAL.

San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present

Lessee and Managers,

A. S. HALEY,

JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most

POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;

thus rendering it at all times the most

DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen,

during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, LESSEE.

ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

Some of the Patrons of the Hotel International:

IN CONSTANT RECEIPT OF

Fresh Goods well adapted to this Market,

By Clipper ships arriving during the season,

Which he can afford and *will sell on as favorable terms* as any other similar establishment on the Pacific coast. Farmers and Dealers will find it for their interest to call and see the subscriber, as his Agricultural warerooms.

JOHN D. ARTHUR,
7-3m 3 and 4 Washington street, near Davis.

Vance's Branch.—New Gallery.

AMBROTYPES, PHOTOGRAPHS, Daguerreotypes and Melainotypes.

VANCE & CO.,

Corner of Third and J streets,

(Hiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerreotypes and Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,
9-3m Sacramento.

CONTINUOUS ACTING PUMPS FOR IRRIGATING.

To be used by Hand or Power.

Capable of raising from

20 to 300 Gallons of Water a Minute,

PRICES

Ranging from 20 dollars to 250 dollars,

according to size and finish.

THESE PUMPS

are pronounced by Competent Judges

to be the

EASIEST WORKING

AND

MOST EFFICIENT

that have ever been introduced.

They serve for raising water

FOR IRRIGATION,

as well as for the

Protection of Property from Fire,

being very powerful and effective

FIRE ENGINES,

and not liable to get out of order.

NO FARMER, MERCHANT OR MANUFACTURER SHOULD BE WITHOUT THEM.

86 and 88 Washington street,
9 87 and 89 Oregon street.

Ladies' Department.

[For the California Farmer.]

WE SHALL MEET AGAIN.

We are not parted—No! though broad seas roll
Their boundless width between. True hearts like ours
Ne'er can severed be. Our sympathies are one,
Our hopes, joys, fears, aye, and our sorrows too.
Long years of bitter woe may drag their weary length,
Ere we again shall meet. Our parting was with tears
But the reunion will be bright with joy.

I turn my gaze toward Heaven
And the stars smile promise of thy coming. I look
Towards the sea, and from the coral isles of ocean
Soft-lipped waves whisper of thy return.
The wind-harp moans thy absence, yet its
Music oft beguiles my saddened heart, and
O'er my spirit steals with soft, subduing power.
I list to tones that thrill my heart with
Rapture. Clasp a form, a treasure far more dear
Than all the gems of earth, and, panting
With delight, enfold the beating heart to mine.
When lo, the vision fades! the joy departs!
'Tis but a phantom of the brain, and I am still
Alone.

Our parting, it is not forever,
For within our hearts there treasured lie
Resolves of holy purpose; and our prayers
Will rise like incense to their native Heaven.
Yes, we shall meet again! when grief has had
Its stormy hour. So doth prayer prevail
To win unchanging bliss, content, and sweet repose.

RENA.

[For the California Farmer.]

AUNT BESSIE'S STORY.

BY HER NAMESAKE.

[CONTINUED.]

"How far is it now, driver?" said I, for the twentieth time.

"Only four miles." Just then a turn in the road brought us in full view of the most elegant mansions I had ever seen; and an expression of delight and surprise involuntarily escaped my lips, although we had passed many, little inferior to it.

I had always heard my grandfather spoken of as the wealthy Mr. Marshall, and knew he had held offices of high trust, and had associated splendor and magnificence with all that bore his name, and supposed we were to see something surpassing all we had yet seen, if indeed that were possible. On we went, the setting sun gilding hill-top and valley, and the azure clouds too, with a bright golden light the most beautiful I had ever beheld; I think no sun-set, before or since, ever awakened in my mind a more subduing train of thought than on that evening; whether it was that I was prepared to revel in all that was sublime or beautiful, or the intellectual feast I I had enjoyed in the conversation of the old gentleman and Millie, I could not fully determine. We soon began to ascend a gently sloping vale, where meandered a modest little creek, though, in crossing the rustic bridge, I saw it was clear and deep, and would afford ample facilities for angling or bathing.

"We are almost there now," said the stranger; "the next house is your grandfather's."

How my heart beat! My visionary optics were extended to their utmost capacity; and sure enough I soon descried, deeply embowered in the thickly shaded grove, the long, low roof of an antique-looking dwelling, with a solitary chimney, and a row of high-arched windows protruding therefrom. On a nearer approach, my horror and consternation knew no bounds, when, according to my childish imagination, I found it entirely wanting in everything that augured of wealth and refinement.

"Oh delightful!" cried Millie.

"Where? what?" said I impetuously, "surely you do not mean that low, ugly-looking old house!"

"Yes, not only that, but the trees! the grounds! the walks! the flowers! O my! look at those dahlia's! what a variety; and that passion-vine over the porch!" But the carriage had stopped and—

"Halloo, here they come!" was sung out in a stentorian voice, from behind the flower-wreathed doorway, and out issued a youth in his shirt-sleeves, blue cotton pants, and broad brimmed straw hat, who immediately opened the door of the vehicle and—

"How are you Doctor? How do you do Bessie?" and a bow to Millie, were the salutations we each received.

"Come along here," said he, addressing me with a broad grin, while I instinctively drew back; but, occupying the seat nearest the door, was obliged to be first handed down, in doing which he pressed his lips to mine with an unreservedness that brought to my cheek a flush of indignation which I took little pains to conceal. He treated Millie more respectfully, and permitted her to alight with less embarrassment. I wondered my grandfather should keep servants, or "help," as I suppose they are termed in the country, who were so ill-bred as to treat strangers with such undue familiarity, and thought I would take the first opportunity which presented itself, to inform him of the fellow's rudeness. But my reflections were cut short by seeing a woman in a checked apron, and sleeves tucked up to the elbows, hurrying along the walk to meet us, whom I at once recognized as my aunt Edith.

"God bless you dear," was faintly articulated, as I was folded to her breast, while a tear trembled in her soft eye. But I heeded not her tears or affectionate embrace. I thought only of her nude arms and her countrified appearance. She gave her hand to Millie and said:

"This is Miss Turner, I presume?"

"It is."

"Well, this is indeed an agreeable surprise, for Bessie informed us her friend thought it inexpedient to accompany her. We are happy to see you."

We were met at the door by a silvery-headed old man, who nearly smothered me with his embraces. But, as everything will have an end, so the kissing at length ceased, and I had an opportunity to look at my tormentor. But oh! how unlike the picture I had drawn in my imagination was the living reality. His face and hands were sun-burned, and his clothes of the coarsest material; the same as worn by the "help" whom I have already introduced, with the exception that a blowse, fastened at the throat with a huge brass button, hung loosely about him.

How vexed I was that I had so insisted on Millie's coming with me; but I consoled myself with the thought that I should soon present her to my uncle, in whose veins I hoped still flowed some of the old aristocratic blood of the Marshalls. Aunt Edith was busy in relieving Millie of her shawl and bonnet, and the rustic in bringing in our baggage, and all asking and answering a hundred questions in a breath. As soon as I could sufficiently command myself, I inquired, in as stately a manner as I could assume, for my uncle Harry. I thought, possibly, he might be in his study, or laying aside his morning gown and slippers, and donning his best suit. I really hoped it would be his *best*, as I wished my friend to form a favorable opinion at first sight, as I felt confident she had not of the rest. Judge of my amazement! when the "*fellow*" who had taken such unpardonable liberties with my lips, at the coach door, having just then relieved his shoulder of our trunk, advanced, raised the old slouched hat, and said:

"Your humble servant madam."

Was it a sense of awe that I was thus unceremoniously ushered into the presence of a living poet, that made my cheek blanch and my lip tremble? or was it that my last spark of hope was thus suddenly extinguished? I leave the reader to judge. I presented my friend in due form, without venturing to encounter her eye, which I imagined was searching the very depths of my soul. He advanced, and Millie rising, they shook hands as cordially as though they had been acquainted for years. How unlike the stately hauteur with which I expected, nay hoped, to be received!

My highly wrought visions of literary greatness were melting away like frost on a bright morning in spring. Greatly to my relief, they kept up a lively conversation, and the better to conceal my emotion, I walked out on the porch. Can this be the delightful homestead whose beauties I have heard extolled ever since I can remember? Turning a corner, and going to the further end of the porch, I discovered a lawn, completely hedged in by trees and shrubbery, in the midst of which was a summer-house of modern construction, and covered with the same kind of vines and flowers that adorned the verandah. I had not till then observed they were of a rare kind, and filled the air with a delicious fragrance. Well these are indeed beautiful. I wonder I had not noticed them before, and after all there is something rather pleasant about the old place; and oh! if here is not a little fawn! He came bounding before me as if expecting something, and took me immediately into his confidence, and we were good friends ever after.

Just then aunt Edith came and announced tea, and winding her arm affectionately around me, said:

"Come Bessie, you look weary, are you not well?

"Oh! yes aunt, perfectly, only a little fatigued with my long ride; I shall soon be as gay as a bird;" and that moment my ear caught the shrill notes of a canary trilling his evening song e'er he should betake him to his perch for the night.

"Have you birds aunt?"

"Oh! yes; so many I hardly know what to do with them. Are you fond of birds?

"Am I fond of birds? very indeed!"

"And flowers?"

"Yes."

These questions seemed so strange, for I thought every one was possessed instinctively with a passion as ardent as my own for both.

"Well, after tea you shall go up into my little aviary, and, if you are not too tired, take a walk in the garden."

We passed into the house and through the room into which I had been first introduced, and entered a large dining hall, covered with a carpet of domestic manufacture, furnished with a quaint old-fashioned settle, and several high backed chairs; and long dimity curtains, white as snow and trimmed with netted fringe, depended from the ceiling to the floor.

My aunt had changed the uncouth-looking habiliments in which I had first seen her, for a dress of bright silk, which set off her fine figure to great advantage; and she presided at table with an ease and dignity which at once gave evidence that she was no stranger to those accomplishments which denote the lady of refined taste and high order of intellect.

Uncle Harry appeared from an opposite door, leading in Millie, who had, I perceived by her fresh appearance, bathed her face and brushed her hair smoothly over her fine brow; while, till that moment, I had not thought of my disheveled ringlets, or my beautiful rose-colored merino with satin folds, in which I had purposed making my appearance. But it was too late; we were all seated, and God's blessing being asked upon the viands, I for one proceeded to do them ample justice. The table was spread with scrupulous care and neatness, and the silver shone with a brightness surpassing the knocker on the Governor's door in ———. The rolls were so light, the butter so fresh and sweet, and the sponge cake and custard the most delicious I had ever eaten, and the raspberries and cream I thought would be a rarity for an Empress' table.

After tea we repaired to the verandah, and a lively conversation was kept up by all parties, until I was completely won from my sullen silence by the beauty of the scene before me. The sun had gone down into the rosy west, the stars "set their watch in the sky," and the round moon gleamed brightly down from her cloudless path in the sky, imparting some of its softening influence to my unquiet spirit. I resolved, deeply as I felt my disappointment, none if possible should know it, and for Millie's sake to appear unconcerned.

The chamber assigned us was a large airy room, with painted walls; the furniture old-fashioned, resembling what we had seen below; a large mirror, and several pictures, hung in mahogany frames, which I thought, had they been set in gilt, might have been considered an ornament for any modern drawing-room; Millie thought they were much better as they were; to which I exclaimed impetuously:

"What horrid taste!"

The "Descent from the Cross," and "Entrance into Jerusalem," and others of a similar character, and the moonlight streaming in through the deep arched windows, gave it quite a monasterial appearance.

I fell asleep, leaving Millie in ecstasies before "Cleopatra's Barge." My dreams were neither sweet nor rosy. I imagined I saw Millie gliding around the room specter-like, holding up the candle to the old paintings, while the next instant (I could not tell, for the life of me, by what imaginable road my thoughts had got round to it) Harry's head was transfered to the shoulders of the old doctor, until I got the three so interminably mixed up together, that I could designate neither apart from the others. When I awoke I found the sun streaming in through the chintz curtains, gilding the old paintings with a softened sheen truly magnificent. My companion, who had noiselessly completed her toilet, sat in a high-backed easy-chair, nonchalently turning over the leaves of some old author, but mentally the pages that memory read claimed by far the most of her attention. A tear sprang unbidden to her eye, but was hastily brushed away. She was thinking of the shadows that, one after another, had been cast upon her life, till now, if not one dense storm-cloud covered the whole, but little sunshine remained to gild her youthful days. A sense of her orphanage came over her, and the truant tear betrayed itself; but, a moment more, and the crushed spirit springs elastic from under the weight of its own burden. We unbolted and swung open the windows and stepped out on the balcony. The air was deliciously fragrant; the meadows, here and there sprinkled with clumps of trees, were clothed with a luxuriant sward of deepest green; the jasmin twined gracefully around the time-stained pillars, and the leaves wore a rich, green tint, and the flowers robed themselves in their brightest colors, and held up their heads with such a stately air, unfolding their dewy petals which flashed in the sunbeams as though set with gems. I was soon loud in my encomiums, but Millie's tearful silence told the deep workings of her ardent though quiet mind.

"How much this reminds me of my old home," she said at length; and I knew the hand of memory had swept a chord where painful vibrations were not easily hushed into silence.

"Oh Millie! I hoped you had forgotten to pack up unpleasant memories; let us go down."

She brushed the tear from her cheek, and we descended to the parlor, where we were met by uncle Harry, who saluted us affectionately, and led the way to the breakfast room, which was a cozy little room communicating with the library, and separated from the flower-garden by large glass doors, which, on this occasion, were flung wide apart. A pair of vases filled with fresh flowers stood on the mantle-piece, and geraniums and other rare exotics filled the place with their excessive odor. A small bust of Byron was between the vases, and a fine portrait of Washington, in a massive gilt frame, hung above them. An outburst of admiration issued from my lips, while the silent trembling of Millie betrayed how much she felt. Poor child of sorrow, she could not but feel the loss of these elegancies so congenial to her refined taste. The conversation during the morning's repast was general, not confined to any particular subject that would be likely to interest me; but in discussing the merits of the viands, I fear I quite as much distinguished myself as on the evening previous.

"But look, the morn in russet mantle clad,
Walks o'er the dew of yon high eastern hill."

[Hamlet.

After the usual family devotions, Harry proposed a walk; the morning was so fine, the air so pure and bracing, he felt quite sure a little exercise was essential, after so long confinement in school. It was with no great reluctance we each accepted a proffered arm, and sallied forth. A noble looking mastiff and sundry curs of plebian origin went frolicking on before, seemingly enjoying the beautiful morning as much as ourselves.

"We will turn down this lane, and I will show you some of our fine stacks of grain and hay. See here, what a fine field of turnips; some of them are as large as my head!"—and quite as much sense in them thought I.

Millie thought they were *beautiful!* and Harry proceeded to give a description of the manner of cultivating the remarkable yield (said they were good for cows and sheep), and the difference between a mangel-wurzel and ruta-baga, to which she listened with almost breathless attention. After a half hour spent in discussing the merits of the turnip-patch, we passed through a pair of bars, and descrying in the distance a row of high stacks, concluded that was our point of destination. I fidgeted, but Harry and Millie were *so* sociable. Dear me! what did they not talk about? Corn, oats, pease, beans, barley, the difference in the soil, and all that, while I cared nothing about it, whether it was loamy or sandy, and as little about turnips, mangel-wurzel or ruta-baga. Arriving at the stacks, a long and lucid description of their difference and perfection were entered upon by our worthy host, who appeared greatly shocked at my indifference and ignorance in all matters agricultural.

Our return was by a circuitous path, that led to the base of a ledge of rocks, where the creek rushed noisily over its pebly bottom. We crossed the rustic bridge, and a fatiguing scramble of a few minutes brought us to its summit. Millie was enchanted! I was—angry; for I had torn my slipper upon a sharp rock, and could see nothing to repay us for our toilsome assent. We were now more than a mile from home, and I pleaded fatigue.

"But, Bessie, you have not yet seen our waterfall; it was for this I came this way."

"How far is it?"

"Oh! it is just here; give me your hand."

"What! are we going to descend this steep ravine?"

"Certainly."

"Oh! I can never do it; pray excuse me; I will wait."

"No indeed! that will never do," and taking my hand in his, and winding his arm around me we commenced descending. There is a strange fascinating power in a young gentleman's coat-sleeve, for with that about my waist, the chasm had in a moment lost its frightful aspect, and we were soon at the bottom.

"Why did we not go round this?"

"There is no bridge over the creek; besides, it is marshy on the other side. Walk along up the stream, and you will see where your father built a little dam, twenty years ago; some of it is still remaining."

I sauntered along, while he returned for Millie. I thought them a long time coming; but many moments had not elapsed ere I descried the loveliest little cascade the eye of an artist ever rested upon. The creek narrowed at this point, and passed over a ledge of smooth rocks, about four feet in hight and six or seven in width. The sun had passed the meridian, and the shadow of the cliff fell athwart the narrow defile, thereby rendering the sublimity of the scene perfect. I had flung aside my hat, and was about to throw myself upon the cool turf, when, on gaining the opposite side of a jutting rock, I became suddenly aware of its being already occupied by a stranger.

[TO BE CONTINUED

[For the California Farmer.]

Rural Life.

MESSRS. EDITORS: The following article was nearly finished before the arrival of the late mails from your State. In the first number of your new volume, I find a beautiful letter from Grace Greenwood, embodying in a few short paragraphs, nearly the whole substance of what I have written. Did time permit I would change my theme, and consign this to the flames. As it is I come before your readers with an apology.

"The farmer's wife displays in every part,
A moral lesson."—[BLOOMFIELD.

NATURE is acknowledged by all to be our most powerful teacher, and her pages are continually outspread, so that the observant eye, and the soul eager for knowledge, may, each moment from her, derive new thoughts, new fancies, and truths sublime.

Through all life's varied scenes, in childhood, youth and age, when joy reigns triumphant in the bosom, and exuberant thoughts take possession of the fancy, or when "grief comes tugging at our heart strings," and sorrow casts its dark shadow over our pathway, nature offers bright sources of sympathy and opens innumerable volumes for consolation.

Thus in the country, life seems possessed with a freshness and charm unknown to the denizens of a crowded town, and the constantly varying occupations of farm-life impart lessons highly instructive and important. When the farmer is engaged in manual labor, digging deep into the soil of his mother earth, scattering a variety of seeds upon the surface, or laying low the luxuriant grass, and garnering the ripened harvest; if he possess but common intelligence and a reflective mind, he must daily be impressed with the wisdom and infinite power of that Almighty hand, which formed from those minute particles amid which he toils, not only worms and tiny insects, but his own muscular frame, giving him a strong arm with which to labor, and wisdom so to apply his strength as to render earth productive, and cause an abundance to spring up in his pathway; which, though sometimes hedged by thorns, is literally strown with flowers.

The withering grass cut by the mower's scythe sends up its fragrant offering of incense, the ripening grain bows meekly as in homage, and the trees of the forest fall prostrate at man's bidding. The farmer's brow is kissed by the evening zephyrs, and his lungs inhale the pure breath of the morning. Birds chant in his ear their matin songs, and brooklets murmur a merry greeting, while his cattle and flocks rush joyously to meet him as he wendeth his way to his morning toil. Freshness and purity constitute his physical atmosphere, and deadened indeed must he be to all the finer sensibilities of life, if his moral nature remains unsanctified during such constant commingling with all that is beautiful.

Farm life, although imposing heavy burdens upon the body, leaves the mind comparatively free and at liberty to search through the fields of literature, science and art. It also possesses that pleasing variety, which each day throws the charm of novelty over labor, and imparts bright anticipations and joyous hopes to the laborer.

"Beyond bleak winter's rage, beyond the spring,
That rolling earth's unvarying course will bring,
Who tills the ground, looks on with mental eye,
And sees next summer's sheaves and cloudless sky;
And even now whilst Nature's beauty dies,
Deposits seed, and bids new harvests rise."

As Grace Greenwood beautifully writes in her letter of December 3d, "The farmer is nature's freeman;" surrounded by his own flocks, treading his own soil, and master of his own hearth-stone, he gathers his family around his fireside with such feelings of contentment and security as even a king might envy. And where can woman seek a more attractive sphere, where look for labor more ennobling, where find more pure surroundings, than in the quiet routine of domestic life, as found in many a farm-house amid New England hills, or scattered thickly over our own loved State?

My own heart never tasted purer joy than it often has derived in the discharge of those duties, by some, considered menial.

I have gone forth in early morning to be greeted by clarion notes from old chanticleer, by gentle lowing from the kindly herd who recognized me as their milkmaid, and by the soft bleeting of dear, white-faced lambs, who bounded joyously forth in full confidence of favoritism. I have shed tears also over the fate of poor innocents, led meekly forth to slaughter; and when chidden for the weakness, have tried to make my heart more callous and unfeeling, but pity lingers and pain rankles still.

Night throws her darkening shadows over my page, and my thoughts begin to ramble, therefore, Adieu. SALLIE.

A Noble Plea for Temperance.

WE present a letter from our correspondent at Sacramento, whose graphic sketch of the evils of intemperance are portrayed by the fact related as witnessed by the writer. Our heart goes out to the noble boy, who, thus in ignorance of the degradations of a mother, clings with fidelity to the being that gave him birth, though he could not realize the terrible calamity that hung over him. Noble boy! thy future, we trust, may be unclouded, though dark thy youthful days. We commend this brief but touching appeal, and hope great good from it. We shall always be happy to give room in our columns to all appeals like this:

EDITORS FARMER: In strolling through L street, a few days since, I saw a sight that cut me to the heart—a decently clad woman led by a small boy of about ten years of age. The woman was in a beastly state of intoxication, reeling and staggering along from part of the sidewalk to the other; the little boy, whom I supposed to be her son, holding with a most tenacious grasp her hand to keep her from falling; his little intellectual face clouded with shame and sorrow; yet filial love was stronger and more apparent, and his strong will mastering the sorrow he felt. My heart sorrowed that I should see one of my own sex so forgetful of the proprieties of life, and the example she was placing before that pure-minded boy. I turned and lingered to gaze at the two as they passed up the street. Her gait gradually became more and more unsteady, swaying back and forth like a tall, slender tree in a tempest. Presently she fell to the earth. My heart bled for the boy, her son; and oh, how much more for her. After much exertion she regained her feet, and, with the assistance of the boy, passed out of sight; but the scene I had witnessed did not pass from my mind or my heart, and from that moment decided me to advocate the cause of Temperance. It is woman's mission to sweep the demon Drink from the earth. If I can save one person from its deadly influence, and restore them to sobriety, it will be worth more to me than all the gaudy trappings of life. Oh, mothers, I speak to you for the sake of your little ones, that they may bless you in your old age, rather than curse you; think, how dreadful, a child cursing its mother, for inculcating the love of drink. Strict temperance brings peace and love; intemperance, poverty and sin. Yesterday, I called at a friend's house. She has a beautiful boy about a year old. While playing with the knob of the door the little fellow cut its finger. The mother, in alarm, called for whisky to bathe it in; the whisky could not be procured; brandy was brought in a bottle, and applied to the child's hand. The mother tasted it, and offered it to me. I declined. She put the bottle to the child's mouth, and it took a hearty draught of it. I thought much at the time. I thought of the drunken woman and her son, and asked myself, should this little child become a drunkard, who would be to blame? Why, its mother. Women pause, consider, think how great, how glorious you may become, by being strictly temperate and bringing your children up so, and, believe me, you will have greater influence than a mighty king, seated in all his grandeur upon his throne. Your minds will become intellectual and bright, and you will receive the homage of many hearts, which then will be your just due. You will have a self-independence and a strength of will to march steadily on in the cause of right and temperance, and God, from his bright throne, will smile upon your labors, and angels will sing a song of praise, that woman is laboring for the regeneration of her own sex, and saving, by her own bright example, her soothing influence, and admonitory gentleness, mankind from drunkards' graves. Mothers, I will write to you again. Farewell.

OIL!

FOR QUARTZ MILLS.

STANFORD BROTHERS,

PACIFIC OIL AND CAMPHENE WORKS,

INVITE attention to the following Certificates from GRASS VALLEY:

NEW-ENGLAND QUARTZ LEAD, Dec. 22, 1857.

W. LOUTZENHEISER, Agent of Stanford Brothers, Pacific Oil and Camphene Works:

Dear Sir: I have now given those Oils from Stanford Brothers, which I purchased from you, a fair trial, and find them the VERY BEST I have ever used.

Z. WHEELER, Superintendent.

ALISON RANCH, Dec. 23, 1857.

This is to certify, that we have been using the Oils from Stanford Brothers Pacific Oil and Camphene works, for a long time, and find them of a superior quality.

JOHN ANDERSON, First Engineer.

ALTA HILL, Jan. 12, 1858.

I hereby certify, that we are now using on our Machinery, Oils manufactured by Stanford Brothers' Pacific Oil and Camphene works, purchased at their Agency in Grass Valley, and have no hesitation in saying I believe them to be superior to any other manufactured in the State.

L. CARLSSEN, Sup't Alta Mining Co. No. 2.

The SPERM OIL furnished to these Mills is worthy the particular attention of ALL who use OIL for lubricating purposes.

Proprietors of Sawmills, Gristmills, Steamboats, and other Machinery, throughout the State, supplied in quantities to suit, and quality guaranteed in all cases.

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

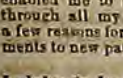
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

Pioneer Establishment.



FOR curing of FISH of all kinds; also for the curing of prime HAMS AND BACON. Always on hand, the best article of Smoked and Pickled Salmon and Herrings, warranted of superior quality, in packages to suit.

The Subscriber is now engaged in Pork Packing, and is desirous of extending the business; for that purpose he will purchase well-fatted Hogs in any quantity.

The Smoking of Beef is also a branch attended to at this establishment.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE,

Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Flattering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flashes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

A. P. SMITH'S

POMOLOGICAL GARDEN

AND

NURSERY,

On the American River, 2½ miles from the Steamboat Levee,

SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,

SHADE AND ORNAMENTAL TREES,

GREENHOUSE PLANTS,

SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE,

embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being CORRECT AS TO NAMES AND VARIETIES, are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of

Shade and Ornamental Trees,

We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

v8-18-6m A. P. SMITH.

20,000

APPLE TREES,

FOR SALE

AT REDUCED PRICES, AT THE

HOPE NURSERY.

THE Nursery is located second block northeast of the new Steam Flour Mill, on Seventh street, San Jose.

The stock consists of over seventy varieties, carefully selected. No pains or expense has been spared to obtain the best sorts, and to render these Trees what they are, THE BEST APPLE TREES, OF THEIR AGE, in California.

v8-23-3m D. T. ADAMS.

The Concord Grape.

THE ORIGINATOR OF THIS NEW GRAPE offers for sale a fine stock, raised from the parent Vine. It has fully sustained its reputation as

The Best Grape for Out-door Culture

having survived the last two severe winters unharmed, where the Isabella, Catawba, and other vines were killed to the ground.

For Size, Beauty, Quality and Bearing,

it is unsurpassed. It is perfectly hardy, and has never been affected by rot or mildew, while it ripens from three to four weeks earlier than the Isabella, and two weeks earlier than the Diana, in the garden of the proprietor.

Fine, strong plants, at $1 50 each; $12 per dozen. Two years old, at $2 each. Three years old, extra, at $3 each. A liberal discount to clubs and the trade. Orders, with cash or good reference, promptly attended to. Address

WHEELER & WILSON

MANUFACTURING COMPANY'S

SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

H. C. HAYDEN, AGENT,

157 Sacramento street

9v-7 3m (between Montgomery and Kearny)

MACHINES AND IMPLEMENTS.

TREADWELL & CO.,

IMPORTERS,

N. E. corner California and Battery streets,

SAN FRANCISCO,

have now landing, and will receive by every packet from New York and Boston, the most extensive assortment of

FARMING MACHINERY and Implements,

ever brought to this market, embracing all the

Latest Styles and Improvements,

which will be sold at lowest rates.....consisting in part of:

REAPERS:

MANNY'S COMBINED REAPER AND MOWER, WITH WOOD'S IMPROVEMENT. These justly celebrated Machines have become too well known in California to require more than a simple announcement where they can be had. We are sole agents for the Pacific coast, and none genuine elsewhere.

McCORMICK'S REAPER....This universally approved Reaper we keep constantly on hand, and are Agents of the Maker.

KETCHUM'S COMBINED REAPER AND MOWER....This Machine is now very popular—having been greatly improved the last two years.

BURRALL'S IMPROVED GRAIN REAPER. This Reaper cuts six feet, and is one of the strongest and most durable Machines in use.

SEYMOUR AND MORGAN'S REAPER; without the Raker attachment and all late improvements.

HUSSEY'S REAPER....Baltimore make.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.
BOGARDUS' 2, 4, and 6 horse do do.
FIELDS' 2, 4, and 6 do do do.
EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times. Extra points and parts can always be had.

This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.
Do. CUTTERS—Several sizes and kinds; hand and power.
HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.
GRANT'S GRAIN CRADLES—In cases of one dozen each.
Do. FAN MILLS. Also, the Boston Mill.
CORN SHELLERS—Hand and power.
Scythes and Snaiths—best steel Scythes and Lamson's Snaiths.
Hay and Barley Forks—2, 3, and 4 tine; of best makers.
Carpenter's Patent Wire spring-Tooth Horse Rakes, 10 to 15 feet long, with wheels, and seat for driver.
Ox Yokes and Bows—all sizes.
Churns—Thermometer, Dash, and Cylinder; also, Dog Powers for do.
Garden Harrows. Cauldrons and Furnaces. Cultivators.
Horse Hoes. Seed Sowers. Harrows.

Field and Garden Seeds

Of every description, via the Isthmus—this year's growth (1857).

Steam-Engines, 4 to 15 Horse Power.

Suitable for Ranches or Mining purposes.

Portable Flour Mills and Mill Stones—Noyes' make. All sizes, 16 inch to 4 feet.

Belting, Bolting Cloth and Packing—All kinds and sizes of the above.

HARDWARE—The best stock in the State.

MINING GOODS—All kinds in use.

COOPERS' AND TANNERS' TOOLS—Full assortment.

Baling Wire—Annealed.

Hay Rope—Best Manila.

Grindstones—Best dressed Nova Scotia; from 6 inches to 4 feet diameter, packed in casks in sawdust.

Wire Fencing—A neat article for inclosing Gardens, Heneries, &c. Also, for Ornamental Garden work, Grape and Rose Trellises.

Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c. &c. 9v-4

Letter from New York.

The Weather—Kansas Question—Royal Marriage—Snow and Sleigh-riding.

New York, February 20, 1858.

Editors Farmer: It is said that confession is good for a man. Believing this to be so, I most cordially take back all I said about the weather, in my last letter. Pshaw! I might have known better. I ought to have waited till the winter was well over. The best I can now do is to say that we have had some of the most outrageously cold weather of late. The fact is, the Gothamites were frightened about the prospects for the coming summer, fearing they would be compelled to sip their mint juleps with the Croton in *its natural state*, and while they were hoping and praying for King Frost, he burst from his home, among the polar snows of the North, pounced upon us, and blew his icy breath around us for three days, and, on the fourth "*kind o' gin out*," on the fifth began afresh, and is now, while we are writing, tapering off, in a glorious old-fashioned snowstorm, in the true Yankee style. Don't mean to *brag* about the weather again.

The news of the past two weeks is important, and of a grave nature. All other questions are of minor importance compared to the interminable Kansas question. The frauds alleged to have been committed at the late elections are astounding. The whole subject has been given to a committee of 15, to investigate. Mr. Speaker has, contrary to all parliamentary rules, packed a committee, a majority of whom are opposed to admitting Kansas as a free State. That majority has refused to investigate the matter. It is now currently reported that the South will secede, and set up for themselves. Where they will draw the line no one knows. They intend to include Mexico, Central America, and, I suppose, South America, the Fejee Islands, all the Pacific Ocean, and the Red Sea, within their domain, and may deem it wise to hitch Africa on at the end, to stop the slave trade, as it will be only removing the poor negro from one part of the dark kingdom to the other. To be serious, I envy not the man or party beginning or consummating the work.

Apart from this question there is not much, of any magnitude, transpiring here. Prosperity and comparative comfort fill the land—there are and always will be exceptions to this rule; but upon the whole we have reason to be thankful "that it is as well with us as it is."

From Europe there is nothing of a startling character. The papers, having pretty thoroughly discussed the late attempt to assassinate the Emperor of the French, have proceeded to give an account of the late royal marriage at St. James' Palace. The bride was beautifully dressed, and behaved prettily, and wept upon her mother's bosom, after the performance of the ceremony, just as any other young girl would who had just pronounced the word that was to separate her from her native land to dwell among a foreign people. After all, kings and queens are but men and women, and have the sympathies and heart cravings of those in humbler life, to a great extent. The Great Eastern has been successfully launched, and will be ready for sea during the early part of the ensuing summer. Mr. Field is in England, superintending the operation preparatory to laying the telegraphic cable across the Atlantic, in the spring.

The news from India continues favorable. Preparations had been completed by the French and English to attack Canton. They were waiting for an answer to their ultimatum, sent in to the Imperial Commissioner Yeh, before they opened their batteries upon the town. [Our correspondent, before this reaches him, will have learned the result, from our last number.]

12 o'clock, M.—It is yet snowing gloriously. The merry bells are ringing in every direction. From my windows may be seen numerous sleighs, filled with *gleeful, laughing freight*, sweeping through Broadway and St. Mark's Place. None heeding the cold or storm, or the snowballs hurled against them by sundry mischievous, fun-loving, fun-provoking urchins. It reminds me of my boyish days, when nothing suited me better than *wallowing* in the drifted snow, and either bury some of my playmates, or be buried by them, if they were the strongest, in the ever changing mounds. After all, there is much pleasure in a cozy sleigh-ride, don't you think so, Messrs. Editors. I know you do, and would be glad to be here, even in this terrible storm, to ———, but I will not call up your young days, and moonlight rides, lest you should have a "longing" for a real Yankee storm, and should be obliged to quit a place where you cannot have one, and come on here; and then what would become of your paper? B.

HOTELS, &c.

WIMMER'S RESTAURANT.

WIMMER invites his friends and patrons back to his old home,

148 Montgomery street.

"There is no place like Home."

The Restaurant so long known as

Wimmer's Restaurant

will open on SUNDAY, the 21st March, where all the luxuries of the season can always be found, and they will be served up in a style unsurpassed by any establishment of the kind on the Pacific coast.

WIMMER, 148 Montgomery street
10 (near the Bulletin office), San Francisco.

ANTELOPE RESTAURANT, Sacramento.

NOTICE.—In consequence of the scarcity of money these hard times, the Proprietors of the ANTELOPE RESTAURANT have concluded to reduce the prices of their well-known establishment, so as to place the necessaries and luxuries within the reach of all.

The undersigned believe that all who visit the ANTELOPE will find it what it should be, a Genteel Eating House, and of the First order.

In addition to the Restaurant department, we have suites of Rooms, and single Rooms for Gentlemen Boarders or Lodgers, equal to any hotel in the city.

We shall at all times be happy to see our Friends.

FIRST PREMIUM IMPLEMENTS.

TO THE FARMER
AND
Dealer in Agricultural Implements.

PLEASE READ.

HAVING erected a good shop, with facilities not heretofore possessed by any house in this State for manufacturing Agricultural Implements, I beg leave to announce that I am now prepared to receive orders to any extent in this line of business. I employ none but the best and most experienced mechanics, and use only the very best materials. In this way I hope to promote the interest of the good mechanic, the interest of the farmer, the interest of our young and growing Agricultural State; and at the same time that interest which is foremost with all mankind—self. I have had twenty years experience in the manufacturing business;

I ESTABLISHED THE FIRST SHOP,
AND
MADE THE FIRST STEEL PLOW

in the State of Wisconsin, in the dawn of her great agricultural improvement. I also

MADE THE FIRST REAPING AND MOWING MACHINE
AND
THE FIRST STEEL PLOW
Ever Made in this State;

Therefore, with my experience, and a knowledge of the wants of the country (which are different from most others), I feel confident that I can and will do much for the interests of the agriculturists of this county; and in my efforts I trust I shall meet with a good share of patronage from the farmer and all interested in this matter, and in the interest and development of the agricultural improvement of our State.

I design, and have under way, the manufacturing of

1,500 Cast Steel California Plows;

THE DEEP TILLER;
OR,
"QUEEN OF THE WEST;"

Of stock entirely superior to any ever worked before in this country. Also,

GANG PLOWS,
HARROWS,
CULTIVATORS,
FANN MILLS,
&c., &c., &c.

In addition to what I manufacture, I shall constantly be receiving implements from the best makers of the Eastern and Western States, amongst which are now due

500 CINCINNATI

EAGLE, STEEL AND ROVER PLOWS,

which stand, in point of true merit and worth, altogether higher than any others in the great agricultural State of Ohio.

☞ Please favor me with a call, and see for yourself, and be convinced that I am publishing no humbug, but simply facts as they are; and that your young State can, within itself, already provide the farmer with implements inferior to none now in use. All kinds of agricultural implements and machines repaired on short notice, and in the best manner, and on reasonable terms.

THOS. OGG SHAW,

*** Shop corner Davis and Sacramento streets,
v8-7 6m San Francisco.

LINDSEY'S
Double Acting Rotary Force Pump.

THIS is a new Pump, patented in America and England in 1855; and for Cisterns, Wells, Mines, Engines, Railroads, &c., has no rival: in that it works easier at great depths, discharges water at different hights, can be used for a hose, is made entirely of wrought and cast iron, without suction or packing, simple in construction, easily put in, not likely to get out of order, will last for an age, and is cheaper than any other Pump. It has a wrought iron pipe, side gearing and balance wheels, with everything complete to raise water by hand, from one to one hundred feet; and costs, boxed and shipped, from $18 to $60.

It must stand in the water, and will not rust.

Drawings and a full description sent to all parts of the world, free of postage, by addressing the general agent.

JAMES M. EDNEY,
56 John street, New York City.

☞ Circulars to be had, and orders received at the Office of the CALIFORNIA FARMER.

LAWTON OR NEW-ROCHELLE
BLACKBERRY PLANTS!!
PRICES REDUCED!

THE subscribers announce to their friends and customers that they have now
OVER SIX ACRES
OF THE
GENUINE LAWTON (or New-Rochelle)
BLACKBERRY PLANTS,
under cultivation, and in good condition.

They are therefore prepared to fill large orders the coming FALL and the next SPRING, at the following reduced prices:

One Thousand Plants	$125 00
One Hundred Plants	15 00
Fifty Plants	8 00
Two Dozen Plants	4 50
One Dozen Plants	2 50
One Half Dozen Plants	1 50

☞ Good Plants for setting, of a second size, will be sold for $100 per 1000 Plants, or $12 per 100 Plants.

N. B.—All Plants ordered of us will be taken up and packed with the greatest care, and under our own personal supervision.

Of the many thousands sent out by us last year, we have heard very few instances of failure, notwithstanding that they have been forwarded to *every part of the country, and to California, with perfect success*, and the setting out has often been entrusted to unskillful hands.

Printed directions for setting and cultivating are sent with every package. GEORGE SEYMOUR & CO.,
v9-2 3m South Norwalk, Conn.

[For the California Farmer.]

Planting our Waste Lands for a Supply of Fuel.

MESSRS. EDITORS: In no instance does the *practical* intelligence of a nation appear to greater advantage, than in foreseeing events which may retard its prosperity, and in providing against their evil influences by timely legislation. Next to the want of a cheap loaf, there is none, perhaps, more severely felt in a community, than the want of *cheap fuel*. It is quite evident, that if we continue to burn our woods and forests, without planting, in order to keep up a supply of fuel, the day is not very remote, when we shall be made to feel the consequences of our improvidence.

While our republican institutions offer to the consideration of the older States in Europe, many laws which they would do well to adopt—such as that most salutary and humane homestead law, which preserves a family, overtaken by misfortunes, from perishing by the roadside; and that equally wise and protective law, which allows a married woman to trade on her own account—it would, perhaps, ultimately tend to our advantage were we to profit by the example they set us, in the management of their forests.

In Switzerland, which bears a strong resemblance to California in its rugged mountains, the proprietor acts more as a trustee for the public, than as an independent owner. An office for the superintendence of woods and forests is established in each district. If the proprietor wishes to cut down any portion of his woods, he serves notice on the office, defines the locality, states the number of acres, and the age of the trees (they require to be from fifteen to twenty years' growth for firewood). Should the Inspector's report prove favorable, a permit issues, the proprietor enters into bonds with the board of superintendents, to plant with forest trees, within a specified time, a tract of land proportioned to the quantity he denudes; when completed, the whole is duly mapped and registered; the owner is then at liberty to apply the ax, and to sell for his own benefit. A regular supply of firewood is thus *secured* to each district; mountains, inaccessible to the plow, are clothed to their lofty summits in perpetual verdure, and every inch of soil is made to contribute to the public good.

In the hope that an example so humane and parental may find imitators in this country, I must not omit to state, that in each district in Switzerland, a large tract is planted with forest trees, for fuel for the poor. To the totally indigent, firewood is supplied without cost; to those better able to pay, it is sold at a price which barely repays the expense of cultivation. This property belongs, by law, to the district; and as poverty is not looked upon as a disgrace, being too frequently occasioned by that social avalanche which baffles all precautions, and buries beneath a temporary pressure, every effort to rise, the poor avail of its advantages, until better times enable them to rank with the wealthier classes.

In drawing the attention of the Legislature to the very important duty of securing to the country a supply of fuel, by causing our waste (and now totally unproductive) lands to be planted, I am only acting in accordance with that solicitude which the Senate has evinced for the interests of the state, by voting the establishment of a "State Land Office." As the duties of that office are not likely to be very onerous, the management of these waste lands may be entrusted to their care, without any additional expense to the country. When State property is sold, a clause can be introduced into the deed of sale, making it compulsory on the purchaser to plant the wast land on his farm, such land having been duly inspected and marked out. By pursuing this plan steadily, we shall have, in a few years, an ample supply of firewood in the country, rendering us independent of *foreign* supply, or merciless *home* speculators; and as the profits from the sale of his timber will be ample, and belonging to the proprietor, will soon reimburse him, both for his outlay in planting and the purchase of his land, it is not likely that the superintendence of the Land Office will be deemed an infringment upon his private rights as a proprietor.

In order to anticipate the accusation of being a visionary alarmist on this subject, allow me to state a fact: Ireland was, at one period of her history, by far more thickly timbered than California is at present, yet her forests have long since disappeared, and she has, for centuries, been dependent for her supply of fuel, on England, to whom she remits annually some four million pounds sterling for coals. Not many years past, a combination existed among the owners of coal mines in England and Wales, and though a fleet of coal vessels were riding, for six weeks, outside of Dublin harbor, one ship only at a time was allowed to enter to discharge her cargo. The price was consequently kept up to an extravagant figure.

"*Mutato nomine, de te fabula narratur.*" Some future historian will perhaps substitute California for Ireland, and in noticing our dependence on foreign countries for a supply of fuel, which we might possess within our own limits, will chronicle, in no measured terms of condemnation, the absence of that *practical intelligence* and providential foresight, which so strongly mark the distinction between civilized and uncivilized nations. RUSTICUS.

[For the California Farmer.]

A Hint to the Agricultural Society.

EDITORS FARMER: It has been said that a man should never give his opinion to bigger folk than himself before it is asked. It may be so; but when a man means well, and himself believes in what he says, his motives ought to be considered as an excuse for his manners. At all events I know that *you* will excuse me for what I am going to say.

When I read the well-written letter of your sensible correspondent Mr. Isaac B. Rumford, of Oakland, in the FARMER of the 12th instant, it struck me that by a little management on the part of the Agricultural Society, farmers might be made to do a great deal of good to each other, in furnishing the community with improved varieties of grain, seeds, and plants (and at the same time find a market for a considerable portion of their stock on hand), merely by having their samples which had been exhibited at the Fair exposed for sale by public auction.

Under the fostering wings of the great Highland Society of Scotland, not only every county, but almost every parish in rural districts, has its local agricultural association, with its annual exhibition of live stock, and grain, and grass-seeds, plowing matches, etc.

In the next parish where I lived, which lies in a fertile and well-cultivated district, the conductors and members of their association paid especial attention to the grain and seed department. In the Northern districts of Scotland it is of consequence to do so, as the climate is approaching, and in the case of wheat may be said to have reached, the line where the profitable cultivation of the usual grain plants ceases. If especial care were not taken to procure frequent renewals of *seed-grain* from more favored localities, the quality of their crops would soon deteriorate. The simple rule which is adopted by the association, goes far to obviate the entire wants of the district.

In every country, I believe, will be found in every department of life, men who seem placed in the very position where Nature meant them to be; they are so much at home in their respective businesses, and so enthusiastic about everything which promotes their advancement. There are many such in Scotland engaged in agriculture, who by the concentration of their capital, skill, and talents to that business, not only render it profitable to themselves, but their exertions become indirectly of much value to their neighbors. The simple plan of that association secures for it the services of such men. It is this:

The competitors at the exhibition shall, on such occasion, exhibit exactly sixteen bushels of every description of grain they desire to enter for competition, which, if it obtain a premium, shall immediately after the judges have announced their opinion, be sold on the spot by the association at auction, and the price given, in addition to the premium, to the owner.

The object is apparent. A small farmer is able without inconvenience to buy this limited quantity, although it should bring double its market value, which it generally does, while it is not so small but by putting it in good land he will have enough to sow a large field, next year. In this way the association do much good, not only by securing the distribution of the best grain in the district, but those who want a larger quantity more immediately than by waiting for its growth, are by such means stimulated to purchase from the exhibitor, as otherwise they must infallibly fall behind their poorer neighbors. AGRICOLA.

MILLERTON, March 23d, 1858.

PLANT, PLANT ON! KEEP PLANTING.—The present abundant rains have undoubtedly extended over the whole State, and thus satisfying the wants of thousands of cultivators who have feared the loss of their labor and crops. Previous to this rain many supposed it was useless to plant more, but now there is a fine opening to all who failed to make their first crop succeed. But we hope no trifling matter will deter any one from planting *now* afresh.

[For the California Farmer.]

Jack Frost in Mariposa.

EDITORS FARMER: In your last number, you express a wish to learn from different parts of the State what effect the late cold weather and frosts have had upon the fruit; and having seen no correspondence from this part of the State, and feeling a deep interest in the great cause which your valuable paper so ably advocates, I (a novice in this business), venture in my bungling manner to impart what little information my limited information and capacity will afford in regard to the "Valley of Butterflies."

Our fruit in this region is as yet limited to the peach, of which we have some fine little orchards, and never did I witness in any country so complete, uniform and full a putting out of the peach blossom, as the trees produced in this valley in the early part of this month; but to the sorrow and regret of every owner and lover of peach trees and peaches, the most destructive black frost visited us at the most critical stage of the formation, which will have the effect of destroying one-half, and blight, or cause the other half of the fruit to be imperfect. This calamity causes many to think that the experiment of fruit-growing, especially peaches, in the mountains, will prove unsuccessful, but I hope otherwise.

The drought in this and the adjoining counties of Merced, Fresno and Tulare, on the plains, has never had its equal since my knowledge of the country, early in '50. It and the cold weather have destroyed the grass there to such an extent, that the stock-raisers are driving their stock up into the hills, as they have already commenced losing flesh.

Times here are hard, generally, and considerable anxiety is manifested at the arrival of every mail from the Atlantic States, about Col. Fremont's making his appearance with something less than a ten-mule-team load of gold coin, for the purpose of bringing water to this thirsty part of God's heritage. But his non-arrival by the last mail steamer, and the late decision of the Supreme Court of this State, in the case of Biddle Boggs *vs.* the Merced Mining Company—which involves the Colonel's right to the minerals upon and in his grant—being communicated to this benighted people nearly simultaneously, have caused long faces to stalk abroad, seeking where they can find rest; while others have been manifesting their joy over said decision by burning gunpowder, and setting bonfires on the summit of Mount Bullion, and other places. It is *gravely* reported here that they burnt Biddle Boggs in effigy at Mount Ophir, and performed many feats of "ground and lofty tumbling," under the influence of bad champagne and whisky, there and at Johnsonville.

But in spite of all these drawbacks, some of our enterprising citizens are showing their pluck, by contracting for the building of several fire-proof Brick stores, this season; and our Board of Supervisors have just closed a contract with Mr. J. O. Lovejoy, of this place, for the building of a granite-stone County Jail, which, when completed, will be the best jail in the State—so some say. So you will see that we are not quite dried up and blown away.

Now, Messrs. Editors, thinking it doubtful whether you will think it worth your while to put one sentence of what I have written, in print, I will stop. Yours, etc., PIONEER.

MARIPOSA, March 25th, 1858.

Just such letters as we want, friend "Pioneer." Let us hear from you often.

Look to Your Hens.

A DISCOVERY! we would ask the careful attention of all who are engaged in the henery business to a discovery which has been made by one of our citizens, which, we believe, will be of very great value, and save many or all persons from further loss of their domestic fowls.

Mr. John O. Bell (of the Carpet Warehouse of this city) has been the loser of numbers of his fine fowls, recently, which led him to make close observations, and the result of his attention is given us in the letter, which we publish below:

EDITORS FARMER: From time to time I have lost great numbers of hens and chickens. I find that when I keep them confined, and under cover, they live, but when I let them out they die rapidly. I have made examination, and in every instance where I have cut open the crop it has presented the appearance of the presence of phosphorous—sickly and with a disagreeable odor. The greatest number die in the spring. The cause, I have ascertained, is the small glow-worm, which, when devoured by the chicken, causes its death in ten or twelve hours. After swallowing the worm the chicken keeps its mouth open, as though burning inwardly, its comb shortly turns black, and it makes a noise similar to that made by chickens suffering with the pip.

I was walking on Telegraph Hill, in company with Mr. Edwards, when he called my attention to a bright spot on the ground (it being very dark at the time). I remarked that it was phosphorous, but, on examining it by the light of a candle, we found a small worm, coiled like a snake, about three to three and a half inches long. I took it into the dark, and rubbed my finger gently over it, and it appeared like a string of fire, and the odor was precisely that of phosphorus, very strong. The worm has every appearance like common earth-worms, except being striped. I am very positive that these worms are the cause of the death of so many chickens. A small quantity of phosphorous placed on bread and given to a chicken will cause the same symptoms, and result in death; but, I think, a chicken will die much sooner after eating one of these worms. J. C. B.

We truly thank Mr. Bell for this valuable information, and gladly send it forth. We hope to remove an evil long suffered among the cackling flock.

The worms he has kindly brought us, and they will be the subject of experiment and analysis.

Will all persons in our city, and elsewhere, take notice, and give us facts and observations?

[For the California Farmer.]

Capt. Randall's Line of Steamers.

SACRAMENTO, March 31st, 1858.

MESSRS. EDITORS: Having been a reader of your valuable paper for the last fourteen months, I have of late perused with much interest the communications of B. on the subject of Capt. Randall's new line of Steamships. I have read with great interest Capt. R.'s plan, and can but believe, if carried out, it will accomplish all or nearly all your correspondent B. argues it will, for California; and I am convinced it would result in more good to our State to have all, or a large proportion, of the stock taken by her own citizens. I think something more ought to be done to procure subscriptions to the stock within the State. To secure the desired object, and to make the plan effective by having the stock taken here, it is important that as many as possible shall be shareholders; and for this purpose would it not be well for properly appointed agents to go through the country, to solicit subscriptions, who are in the possession of such facts as will convince the people that they are not to be humbugged. In this way neighbors might be induced to unite in purchasing one share, where they did not feel able to invest more largely, and thus would not only a large amount of stock be taken; but what is more desirable, the number of rural, home stockholders, would be materially increased. One great, and perhaps the principal objection, that men of small means have to investing in such enterprises, is the well-known fact that as a general rule the large shareholders have the management of the business, and by a peculiar shrewdness or business tact contrive to obliterate the claims of the "small fry," and become the "Great Joint Stock Company" themselves. If this objection can be overcome, I believe large amounts would be taken of the stock in question.

If the farmers, mechanics and miners of California can be made to believe that Capt. Randall's plan can and will be carried out in good faith, and the business managed by honest and faithful men, who will see that the interest of the small capitalist is protected against the swindling schemes of speculating stock jobbers and the encroachments of the moneyed few, they would generally invest to the extent of their means in this Company.

I have been in California more than five years, separated from the most of my family, who still wait in the "Pine-tree State" for word to join me in the "home of my choice," the verdant valley of the Sacramento. I have struggled long and earnestly to prepare a home for them, but having the misfortune to locate on land claimed under a Spanish or Mexican grant, I have delayed moving them here, in the vain hope that soon the title would be settled, and my home secured or lost, till "patience has ceased to be a virtue;" and I have determined to have them come out here as soon as the rates of passage are within the limits of my means, and the conveyance safe. There are probably hundreds, and perhaps thousands of similar cases, in the State. Could not the money, say from $600 to $1000, which I should have to pay the present Companies to bring my family here, be paid for stock in this Company, and my family brought here within a year with little additional expense?

I feel an interest in the accomplishment of this project, and would forego for a time the joy of a re-union with my family, to have money appropriated for this object.

There is competition now, and undoubtedly if I were in New York and with my family, I could buy tickets at a fair price, but should I go home and remain a few months, and then start to come out here with but just money enough to purchase tickets at present prices, I might find on arriving in New York, that tickets had advanced beyond my means, and be obliged to return. Certainty of fair rates, is what the public want.

J. L.

We acknowledge the reception of Congressional documents of value from our Representatives at Washington, Messrs. Scott & McKibben, and books and papers from Senators Gwin and Douglass, and also documents from Hon. Mr. Stevens; to all we return thanks.

What They Think of the Farmer Abroad.

"KIND words, fitly spoken, are like apples of gold in pictures of silver."

If there is anything that would stimulate one in such an enterprise as that in which we are engaged it is words of encouragement and praise meted out to us in just terms. True and generous words of commendation are God-speeds, and nerve the arm and strengthen the heart. We know their value. It has been the approval of the wise and good that has sustained us through long years of trial. Had it not have been for this we should have "fainted by the way," for we had enough to try us, enough to discourage; but we were sustained, have been sustained, and nobly, too. If we have met with obstacles, crosses, and rebuffs, we knew the *censure* of some men was *praise*. Their approval would cause a blush. We have labored, and we have been rewarded; and as we hear praise of our journal in the older countries of Europe, as we receive compliments paid us from all parts of the Union, and the approval and generous support of the best citizens of California, we feel a desire to do more and more to merit this approbation. To all our friends and patrons we feel deeply indebted for many kind words, and generous acts.

Among the words of cheer that have come to us recently from the Atlantic States, we have taken a few, which we append. We could give hundreds of like character. From Messrs. George Seymour & Co., South Norwalk, Conn., Nurserymen:

"We consider the CALIFORNIA FARMER as standing in the front rank, and as one of the best agricultural papers of the country. The great wonder is how you sustain such a paper. Every man, woman, and child ought to take that paper, for all have a deep interest in its teachings. May you prosper."

In a letter from Oak Hall, Boston, Mass., we find the following:

"May we be permitted to remark that, from our observation during an acquaintance with the FARMER running through a period of two or three years, we have been much pleased with its mechanical appearance, and with the ability with which its editorial department has been conducted. We have been gratified to perceive evidences, from time to time, of the increasing prosperity of the paper, showing that it occupies an important position in the affections of Californians. We are persuaded that it must also be a welcome messenger to the friends of California in the older States."

From a distinguished mercantile house in Boston we received the following:

"The appearance of your FARMER reflects great credit upon all concerned. We do not know of any similar publication on this side which approaches it in appearance."

From a large publishing house in Philadelphia they say, in speaking of our journal:

"We have no hesitation in saying that, in the agricultural department, as well as in the miscellaneous and in the typography of your paper, it compares most favorably with the agricultural papers of the Atlantic States."

A friend and correspondent from a city in Wisconsin says:

"I am a young farmer, and having just bought me a prairie farm near this city, I, of course, take *several agricultural journals* (hear this, farmers of California!) and among them the Country Gentleman from Albany, N. Y., and in that paper of 21st January I find a description of the apple-pie melon, extracted from the CALIFORNIA FARMER. Can you send me a few seeds of that melon? If you will send me a specimen number of your paper, I will, on the receipt thereof, send you a year's subscription for at least two copies."

Inclosed we found stamps for the value of the seed, and for return postage. Here is the true spirit. Such a farmer is sure to succeed. Farmers of California, remember, he says *he takes several agricultural papers*, and sends also here, many thousands of miles, for the CALIFORNIA FARMER. What an example! We must give his name, Spencer Cole, Esq., of La Cross, Wisconsin. He is a burning and shining Cole; his heart warmed with the right spirit.

These are fair samples of the letters we are daily and weekly receiving, and these cheer us on. The commendatory notice of "Rusticus," and several we have received from Europe, of like character, and the great interest now felt for California, will, we hope, awaken a better interest here, and give us as many co-workers as is possible. We now appeal to all who will read our paper, if those of other States thus appreciate our journal, and the work in which we are engaged, should not our own people help us to do a still greater work? We have only begun yet. Who will help us? How many there are now, who, by a few words to their neighbors, could send us a goodly list of subscribers.

TREADWELL & CO.—At this large and most extensive agricultural warehouse, are now being received by every clipper ship, numerous invoices of all the various Agricultural Machinery and Hardware, as well as the other goods in which they are so largely engaged as importers. The Messrs. Treadwell & Co. have been so long engaged in this trade, that they have facilities of an uncommon character which enables them to offer one of the best stocks in this country.

The Camellia.

We herewith present our readers with the History of this noble and beautiful Plant. Its origin, its uses and its character, will be curious to many who have never before known its connection with the famous beverages that so many thousands sip daily. We give the following from Loudons celebrated Encyclopedia of Plants, with all the remarks attendant upon its early discovery and history, and the names of some of the favorite flowering species of early days. Now, by the rapid advances made by hybridization, new and rare species take the place of older varieties, as in the instance of the "Wilderii" and "Abby Wilder," to which we alluded in our last issue. In another part of our paper we shall give some facts relative to its culture in California, and the new developments it has made in our wonderful clime. We repeat, it is a flower that will become ere long the most favored of any by its introduction here:

Camellia. In honor of George Joseph Kamel (or Camellus), a Jesuit. His Syllabus Stirpium in Insula Luzone Philippinarum, forms the appendix to the third volume of Ray's History. This is a remarkable genus, as at once furnishing the domestic drug tea, in universal use, and flowering trees and shrubs as universally admired. The seeds of all the species are crushed for oil, which is used like that of hemp or poppy in cookery.

C. Bohea and viridis are the species which chiefly furnish the tea; but C. Sasanqua is also used, and sometimes the leaves of the other species are taken, though that practice is rather to be considered in the light of adulteration. [The writer then refers to the location of the tea districts of China, and proceeds to give the method of cultivation, and the process of curing the leaves for tea. We may publish this at another time.]

As more select sorts of tea, the blossoms of the C. sasanqua appear to be collected; the buds also appear to be gathered in some cases. By far the strongest tea which Dr. Abel tasted in China, was that called *yutien*, used on occasions of ceremony. It scarcely colored the water, and, on examination, was found to consist of buds, and half-expanded leaves of the plant.

As substitutes for tea used by the Chinese, may be mentioned a species of moss, common to the mountains of Shan-tung, an infusion of ferns of different sorts, and Dr. Abel thinks the leaves of the common camellia and oil camellia may be added. Du Halde observes, that all the plants called tea by the Chinese, are not to be considered as the true tea plant; and Kæmpfer asserts, that in Japan a species of Camellia, as well as the Olea fragrans, is used to give it a high flavor.

The oil-bearing Camellia, C. oleifera, is cultivated for its seeds, from which an oil is expressed, in very general use in the domestic economy of China. It grows best in a red, sandy soil, attaining the hight of six or eight feet, and producing a profusion of white blossoms and seeds. These seeds, as well as those of any of the other species, are reduced to a coarse ppwder, which is stewed or boiled in bags, and then pressed, when the oil is yielded. (*Dr. Abel's Nar.* 176.)

The culture of the tea Camellias in our greenhouses is very simple. The plants are very hardy, and may be preserved in a pit without fire-heat; they grow in loamy soil, or loam and peat well-drained, and increase freely by layers, or cuttings of the young wood taken off when it begins to ripen, planted in sand, and covered with a hand-glass in a coal frame or pit.

C. japonica, in the groves and gardens of Japan, is a lofty tree, much admired for its fine form, rich clothing of shining deep green foliage, and elegant red or white flowers, single or double. It is equally admired in China as in Japan, and much cultivated in both countries. It is of frequent occurrence in Chinese paintings, with Hibiscus and Chrysanthemum, two of their great favorites. There are several varieties of C. japonica in China, most of which have been imported here, and their number considerably increased, and daily increasing, from seedlings raised in this country. The double white, double striped, and double Waratah (from the central petals resembling those of the Waratah plant of New Holland, Telopea speciosissima) are considered the grandest and most marked varieties, and are also free-growers and flowerers; the peony-flowered and fringed white are also standard beauties; but all are much admired.

The single red Camellia is propagated by cuttings, layers, and seeds, for stocks; and on these the other sorts are generally inarched, and sometimes budded or grafted. The cuttings are formed of ripened or ripening shoots, taken off in August, cut smoothly across at a joint or bud, two or three of the lower leaves only taken off, and the cuttings then planted and made firm with a small dibber, in pans of sand or loam, or, by some cultivators, sand and peat, or sand alone. The pans are kept in a pit or cold frame, without being covered with glass, but shaded during powerful sunshine; and in the following spring such as are struck will begin to push, when they are to be placed in a gentle heat. In September or October following, the rooted plants will be fit to pot off; and in the second or third spring they may be used as stocks. Such is the practice in the London nurseries. Henderson, of Woodhall, near Edinburgh, puts in Camellia cuttings at any time of the year, excepting when they are making young wood. He puts fifty cuttings in a pot of sand eight inches in diameter, sets them in a cool place in the back of a vinery or peach-house for a month or six weeks, and then plunges them to the brim in a hotbed where there is a little bottom heat. A speedy mode of obtaining stocks is by planting stools in a pit devoted to that purpose, and laying them in autumn; the following autumn most of the layers will have produced roots, when they may be taken off and potted, and used as stocks in the succeeding spring. Inarching or grafting is performed early in spring, when the plants begin to grow; the chief care requisite is so to place and fix the pot containing the stock, as that it may not be disturbed during the connection of the cion with the parent plant. The graft being clayed over, is then covered with moss to prevent its cracking. When independent grafting is resorted to, the mode called side grafting is often used; but the operation of tongueing is generally omitted, as weakening the stock and unnecessary, with a view to prevent the cion from being blown off. A few seeds are sometimes obtained from the single red and semi-double Camellias, and from the single Waratah; these require two years to come up, but make the best stocks of any.

Before they are grafted they are often allowed to come into flower, in case some new variety should be produced; but the best cultivators, as Messrs. Loddiges, Sweet, and Mackay, regularly cross-impregnate the blossoms in Knight's manner, by cutting out the stamens before the anthers are mature, and when the stigma is in a proper state, dusting it with the pollen of the species or variety intended as the male parent.

C. Sasanqua seeds most readily, and is mostly employed as the female parent for raising new varieties. The plants, if well treated, flower in four or five years, and if nothing new is produced they still make excellent stocks.

Some cultivators grow the Camellias chiefly in peat. Messrs. Loddiges, who have the most numerous collection of this genus, formerly used loam, with a little sand and peat; and they are grown in a similar soil in Hammersmith nursery. Of late, Messrs. Loddiges find light loam alone to answer as well or better. In the Comte de Vandes garden at Bayswater, rotten dung is mixed with loam and peat. Sweet recommends sandy loam and peat. Henderson of Woodhall is one of the most successful growers of the Camellia in Scotland: his compost is as follows: take one part of light-brown mold, one part of river-sand, one part of peat-earth, one half rotten leaves; mix them all well together, and when the Camellias require shifting, put some broken coal-char in the bottom of the pots, and some dry moss or hypnum over it. (*Caled. Mem.* iii. 316.)

Camellias have the best effect, and are grown to most advantage in a house entirely devoted to them. Such a house should be rather lofty, as the plants never look so well as when six or eight feet high, trained in a conic form, and clothed with branches from the root upwards. The plants should be raised near to the glass by means of a stage, which should be so contrived, that, as they advance in hight, it may be lowered in proportion: only the very best crown or patent glass should be used; because it is found from experience that the least inequality of surface or thickness of material, so operates on the sun's rays, as to concentrate them, and burn or produce blotches on the leaves of the plants. Every cultivator must have observed that leathery shining leaves, like those of the orange, myrtle, &c., are more or less subject to this solar injury; but the leaves of the Camellia are particularly so. Such nurserymen recommend a roof which will not admit much light; others the use of green glass; of an opaque roof, with glass in front only; or of a house facing the north. Our opinion is, that a light house facing the south, or, better still, glass on all sides, is essential to the perfect growth of the plants; and that all solar accidents may be avoided, or at least rendered of no consequence, by using the best glass, and placing the plants as near it as possible.

To grow the Camellia to a high degree of perfection, considerable care is requsite. The roots are very apt to get matted in the pot, and, by the space they occupy, so to compress the ball of mold, as, after a time, to render it impervious to water. Hence frequent attention should be had, to see that the water poured on the pots moistens all the earth, and does not escape by the sides of the pot, moistening only the web of fibres. When the plants are in flower, and in a growing state, they require to be liberally watered, and also a degree of heat somewhat greater than is usually given to greenhouse plants. If this heat is not given in November and December, the plants will not expand their blossoms freely; and if both water and heat are not regularly applied after the blossoming season, vigorous shoots and flower-buds will not be produced. To form handsome plants, they should be trained with single stems to rods, and pruned so as to make them throw out side branches from every part of the stem: to encourage these, the plants should not be set close together on the stage. In summer they may either be set out of doors on a stratum of scoriæ, or on a pavement, in a sheltered but open situation; or the glass roof may be taken off. The hardier sorts, as the double red, blush, peony-flowered, &c., answer very well when planted in the bed or border of a conservatory, provided the roof or entire superstructure can be removed in summer to admit the full influence of the weather. When this cannot be done, the Camellia and most other plants are better in portable utensils, which admit both of examining their roots, and placing them in the open air, or in a greater degree of heat at pleasure. The single and double red Camellia will endure the open air when trained against a south wall, and protected by mats in winter; and there can be no doubt that in time these and other species will be more perfectly inured to our climate.

Henderson of Woodhall gives the following account of his mode of treating the Camellia. "The best time for a regular shifting of the Camellias is the month of February or beginning of March. After shifting all those that require it, put them into the peach-house or vinery, when there is a little heat; if there be no peach-house, vinery, nor pinery, set them in the warmest part of the greenhouse. They will soon begin to make young wood. From the time they begin to make their young shoots, till they have finished their growth, give them plenty of water. They may be kept in the vinery or peach-house till they have formed their flower-buds at the extremity and sides of the young growths, when a few of them may be removed to a colder place, say behind the stage of the greenhouse; for the Camellias are fond of being shaded during strong sunshine. In three or four weeks after, a few more of the Camellias may be brought from the vinery or peach-house, and put into a cooler situation. This may be repeated three or four times, which will make as many different successions of flowering. Those that are wanted to come into flower early, may remain in the warm house till they are beginning to flower, when they should be taken to a cold place, say the coldest place of the greenhouse; then give them plenty of light only, and they will open their flowers well, and stand long. A Camellia cannot stand heat when in flower, indeed they seldom open their flowers fine when in heat, and, at all events, the flowers soon fall off. Those that are kept all the summer in the vinery, will come into flower by the first or middle of October, and a pretty large plant, having perhaps fifty or a hundred flower-buds, will continue in flower till the month of January. Those plants that are removed early from the vinery, will now be in flower, to succeed those that were in flower in October, and have now done flowering. These last should be immediately taken into the heat. They will make their young wood early, and they may remain in heat till they come into flower, which will perhaps be a month earlier next year. By attending to shifting the Camellia plants from the warm house to the cold, a regular succession of flowers may thus be had from the first of October to the middle of July. I have even had them all the summer, but the flowers are best in the winter. Those produced in summer are far from being so fine, and do not stand half the time of those that come into flower in November, December, January, February, March, and April. Camellias delight to be kept damp all the summer months, and a little shaded from the strong sun. Give them plenty of water while they are making their young shoots; they may also get a gentle sprinkling over the leaves once every week during the summer season, except when they are in flower. Camellias will stand a great deal of cold without being much injured, but they will not form many flower-buds without some artificial heat." (*Caled. Mem.* iii. 316.)

State Agricultural Society's Reports.

[Continued.]

SUGAR-CANE, COTTON, AND TOBACCO.

The committee on sugar-cane, cotton, and tobacco, of California growth, submit the following report:

The committee found on exhibition but two samples of the cane, several of cotton, and none of tobacco. The grower of the cane states that he has an acre in cultivation. The sample produced, speaks well for its production and successful cultivation in this State. It has matured to six or eight joints, and is of full size. The success which this experiment has met, must dispel all doubts of the adaptability of our soil to the profitable and successful cultivation of this great and necessary staple, entering so largely into the every-day use of all classes, and must be hailed with pleasure by every true friend of the State. There is a reasonable prospect that at no very distant day we may be able to say, as in the case of wheat and flour, to the balance of the world, we have enough and to spare.

The committee also examined the several specimens of cotton, and, as with the cane, we have to report the successful growth of this great staple. We also examined, in contrast, Georgia upland cotton, and the growth of this State, from seed taken from the same parcel; and the improvement in fineness of fiber, of the native growth over the imported or Georgia grown, was manifest and striking; and in this, we have the concurrence of experienced spinners from the east. But the staple of the native is not quite so long, though fully as strong, as the Georgia cotton. This we attribute altogether to the lack of moisture in the earth where it grew.

We believe it a reasonable calculation, that, when our bottom or swamp lands are sufficiently diked to keep out the spring and summer floods from them, we shall be able to procure an article of cotton not only of finer texture, as is the case now on our dry lands, but one of superior length of staple; the two qualities that make a first-rate article.

Several other samples examined, rate as fair upland. The one from Slocum's Bridge, has the advantage of staple and texture over any of the others. The samples grown in Los Angeles county, are equal, if not superior, to the best Mississippi or Louisiana cotton, and, of course, superior to all others, and but one grade below Sea Island cotton. This sample is not of the Sea Island seed, but the Grey Pettey Gulf kind, proving, conclusively, the perfect adaptation of our climate and soil to the production of the very finest staple.

The last mentioned specimen of cotton is in the name of Mr. Gibson, represented by Mr. Osborn. It was grown on a loose soil. There being no number to refer to, we have given the name, and recommend the premium to be awarded to Mr. Gibson, for the best specimen of cotton.

The two specimens of cane exhibited, are, one by Mr. Temple, and the other by Mr. Boram. We recommend that the first premium be given to Mr. Temple, as exhibiting the largest quantity and best matured, if any difference; and the second premium to Mr. Boram, for small samples of good cane, nearly, if not quite equal to the first.

M. WALTHALL, } Committee.
S. M. McLEAN, }

FRUITS.

The committee appointed to examine the several classes and varieties of fruits exhibited, to award premiums thereon, beg leave to submit the following:

The growing importance of the fruit-raising business, on the Pacific slope, as well as the extraordinary facilities furnished both by soil and climate, and the (more than common) interest manifested in the cultivation of fruits, especially those fruits indigenous to the temperate zone, all indicate the necessity of care on the part of those who attempt to make a report upon this subject.

It would be impossible to notice, in detail, all the different varieties of the various classes of fruits cultivated in California, even of those imported from the various other States and from other countries, since 1850. Many of the several classes, and especially some varieties, require longer time and a greater variety of treatment, in order to develop fully their peculiar characteristics; and it is well known to all who have followed fruit-growing as a business, that the first crop on a young tree will often vary very much from the original type. Just so in California, where that business is yet in its infancy. General characteristics can almost always be detected, but there is such a wonderful tendency (we cannot call it anything else), to redundancy, such extraordinary bearing, young trees of three and four years old sustaining such abundant crops of large, heavy fruit, and the richness of flavor also keeping pace with the prolific character of the trees, and the extraordinary size of the fruit, especially of apples, pears, peaches, plums, apricots, etc., that at first sight, it is no wonder their old friends hardly know them. This tendency to precocious bearing and extraordinary size of some specimens of apples, pears, peaches, etc., in the first crop on young trees, is not entirely peculiar to California; and many have been anxiously watching for the last two or three years, to see if, as the trees advance more toward maturity, they show any tendency to fall back, in their size, crop, and flavor, to their common character in their old eastern home. But, hitherto, no such tendency is observable, except in some few cases, where improper management, bad culture, or over bearing, has evidently been the cause. Wherever the trees have been well cared for, and not allowed to over bear, the great increase of size and richness of flavor are still apparent; and every year adds its testimony that all the varieties of apples, pears, peaches, plums, etc., will have in this country a decided California character, viz: largeness of size, increase of weight, brightness and richness of color, and sweetness of flavor.

The greater part of the valleys, side hills, and table lands, on the western slope of the Sierra Nevada, may be brought into requisition for the culture of fruits. Enough has already been done to indicate what may be expected, as population increases and facilities for intercourse improve. Some of our finest peaches, pears, and all the varieties of melons, have already been grown, in the highest perfection, high up in the mountains; and the works of the miners, who are unwittingly preparing the ground in many places, by trenching to an enormous depth, will, no doubt, be some day turned to good account. It has already been demonstrated that there are many localities, far up in the Sierra Nevada, better suited to the raising of many varieties of fruit, than the low, flat plains near the sea-coast.

Without adding anything further at present, your committee feel assured that every successive year, as it aids in developing the natural resources of California, will also give larger and richer proofs of the suitableness and adaptability of her soil and climate, when knowledge and industry are properly applied, to produce abundance of all the varieties of fruit.

Gardening.

There is a pleasure in a garden, says the Horticulturist, which none but gardeners know. From the moment you love the art, and look nature in the face, you are at peace with your own heart; you have no absurd opinions to combat, no point to strain, no adversary to crush, no fool to annoy. You are actuated by fear or favor to no man. Patience grows out of the endless pursuit, and turns into a luxury. A streak in a flower, a wrinkle in a leaf, a plant in perfect health, gives us enjoyment for another half day. The hours pass on untold, without weariness; nor would you ever wish to pass them otherwise. Innocence is joined with industry, pleasure with business, and the mind is satisfied.

Experimental gardening is, undoubtedly, the backbone and marrow of the craft. The gardener who makes no experiments, says a late writer, is not worth salt to his porridge.

In the earliest period of Roman history, every family had its garden, and as little animal food was consumed, it was from this source that the population principally drew its subsistence. Hence, in the laws of the Twelve Tables, the term *hortus* is synonymous to *hereditas*, or inheritance; and the word *villa* is nowhere made use of. As a proof, indeed, of the honor paid to gardens by the old Romans, Pliny remarks that men of the highest rank were willing to borrow their names from its contents, as in the Valerian family, and the Lactucarii did not think themselves disgraced by taking their names from the Lettuce. These, however, were mere kitchen gardens, containing such plants and trees alone as were subservient to the daily uses of life; and in Cato's work, the only notice we have of a garden is of this description, although it be true that, according to Pliny, he recommended that plants which could be used for chaplets, should be likewise cultivated in it. In proportion, however, as civilization and wealth increased, a taste for ornamental plants became prevalent; and even in Rome itself, as stated by Pliny, it was the fashion of the day, among the lower classes, to have little gardens in the front of their houses, until debarred from that indulgence by the necessity of shutting out the robbers which so abounded in the city.

The Chardon Potato.

BY GUSTAVE HENZE.

For some years past a new variety of the potato, extraordinarily productive, has been cultivated on many farms in the environs of Mans. It is known under the name of "the Chardon Potato," because it was obtained by M. Chardon, a farmer at Griez (Sarthe) in 1846, from a sowing made with seeds purchased at Mans, which had been ripened in Saxony.

The Chardon potato is distinguished from the varieties cultivated either in fields or gardens, by the following characteristics:

1st. Its tubers are long, and rather flat; its skin is glossy and yellow when cultivated in light and sandy soils, and rough and yellowish brown tinged with red, when grown in argillaceous earth. Its eyes are numerous and deeply sunk in cavities; its flesh is of a clear yellow.

2d. Its stems are numerous, strong, and furnished with deep green leaves; its flowers are white, washed with rose, and succeed each other without interruption, from the 15th August to the end of September.

This variety is late, and ripens its tubers towards the end of October. Up to this time (1856) the disease which has appeared every year since 1845, and committed such great ravages upon the late potatoes, has not touched it.

But the Chardon potato is not only an interesting variety on account of its having up to this time resisted the attacks of the disease: it deserves to be propagated because it is without condtradiction, the most productive potato of all those cultivated upon a large scale.

M. Dugrip, to whom attaches the merit of having been the first to direct the attention of agriculturists, committees and societies, to this fine variety, has produced, on an average per hectare, twenty times the quantity of tubers planted upon the same superficies; this result is so much the more remarkable that it constitutes the mean return of the culture of 7 hectares 40 acres (about 17 acres 1 rood 9 perches).

In cultures conducted on a smaller scale, the returns obtained have frequently been extraordinary. Thus M. Condray, a farmer in Saint Maixant (Sarthe), has produced from 8 hectoliters 220 hectoliters, or more than 27 to 1; M. Epinette, a proprietor at Ferté, Bernard, gathered 33 hectoliters, for one; and M. Velmorin has 18 hectoliters for 20 liters, which is more than 90 times the quantity planted. In general the weight of the tubers averages between 150 and 225 grammes (from 4.8 to 7.2 ounces). This potato will propagate itself very rapidly in France, if it continues to be so productive and remains perfectly healthy; for a great number of agricultural committees and societies have experimented upon it this year (1856), and we strongly recommend the readers of the *Journal d'Agriculture Pratique* to follow this year its divers phases of existence in these attempts, and to take an account of the products they render in the autumn. We wish to believe that it will still furnish an abundant, if not an extraordinary produce, and that we shall be able anew to regard it as a true conquest, a unique variety, as well on account of the beauty of its tubers as of the large proportion of starch they contain. [Translated for the Horticulturist, from *Journal d'Agriculture Pratique.*

Keep Your Mouth Shut.—Never allow the action of respiration to be carried on through the mouth. The nasal passages are clearly the medium through which respiration was by our Creator designed to be carried on. "God breathed into man's nostrils the breath of life," previous to his becoming a living creature. The difference in the exhaustion of strength in a long walk with the mouth firmly closed, and respiration carried on through the nostrils instead of through the mouth, is inconceivable to those who have never tried the experiment. It is said that the habit of carrying on the work of inspiration and expiration through the mouth is the origin of almost all the diseases of the heart and lungs.

The Right Kind of Cultivation.

We copy from the Reports of the Massachusetts Horticultural Society, the following sketch of the Committee who visited the Gardens and Orchards of their members. The Gardens of Mr. Gordon we know very well, as it was near our own native spot, and where we had practiced the same system of culture. We ask the attention of all cultivators to these facts. We know that trench spading, deep and thorough tillage, is the only kind of culture that will reward permanently. From an almost barren spot, Mr. Gordon has created an Eden, and he truly deserves a rich reward for his zeal:

Mr. John Gordon, of Brighton, has four acres deeply trenched and under-drained, entirely covered with pear-trees grown for market; about two-thirds are on quince. He finds a ready sale for those having a reddish or russety skin, while those of a green skin could not be disposed of. All his fruit is carefully gathered by hand, and some four days before designing to market it, he takes his fruit boxes (about twenty inches square, and six or eight deep), and places some woolen substances over the inside bottom; he then places a layer of pears, and then another of woolen, and another layer of pears, covering the whole with woolen. In no case does he pack more than two layers of fruit which is then allowed to go through a *sweating process*; this gives it a rich coloring, suited to market. Cotton would not ripen them so fast, and woolen leaves a finer blush on the skin. Worth remembering, truly; for while Mr. Gordon's Bartletts were yielding him ten dollars a bushel, other wagons by the side of his, had pears of the same variety, equally as large, but in consequence of retaining a green skin, were offered at three dollars per bushel. *Thorough under-draining is essential* for a fruit garden. Again: Red apples, on a yellow or russety ground, command a good price for the table, where it would be difficult to dispose of those having a green skin. Sweet apples also command a good price during winter.

SINGER'S
SEWING MACHINE.

JOHN H. DUNNELL, Agent,
171 Washington street,....San Francisco.

ALL who want a Sewing Machine for *service*, not show, a machine *easily learned, easily operated, never out of order*, which sews *any fabric, fine or coarse*—*muslin, cloth, or leather*; making a stitch *alike on both sides*, and using *cotton, linen*, and *silk thread*, will do well to look at our machine. It will do all we claim for it.

We have testimonials from all parts of the country, and from parties who have used other well-known machines, and discarded them for ours.

Our **Family Machine** is the most elegant one in use.

Circulars will be sent on application.

Our Machine is in more extensive use, for general manufacturing, than any other. v9-11 3m

The Collegiate Institute at Benicia, Cal.

THE School Year at this Institution, is divided into two terms of five months each. The Sessions will open on the 4th of January and the 5th of July; closing on the 4th of June and December.

To the Patrons of the Institute we would say, that the facilities for obtaining a good education have been much increased this year. The range of studies will be ample, embracing the Ancient and Modern Languages, and a thorough course in the Physical Sciences. Neither are the accomplishments overlooked: in Piano and Vocal Music, we have the best Teachers in the State. Thoroughness in the Elementary Branches, before advancing into the higher studies, will be a primary requirement. We shall continue to follow, in our government, school arrangements and method of instruction, the Normal School or Prussian system, which has been adopted in the Eastern States with so much success.

Pupils will be fitted for the University, or will be trained with a view to the completion of their education in this School, as may be requested by the parents. Where no special directions are given, the course of the Institution will regard the Modern Languages, Natural Sciences and Practical Avocations of life, as the sine qua non of a good education, and the Ancient Languages as accomplishments.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location of the School is easy of access from all parts of the State; the buildings are excellent; and the quietness and healthfulness of the village are unsurpassed by any place on the Pacific.

TERMS, PAYABLE QUARTERLY IN ADVANCE:

	PER MONTH.
Tuition in the Higher English Studies (including Natural Philosophy, Chemistry, Algebra, Geometry, &c.,	$ 8 00
Theory of Surveying (including Linear and Linear Perspective Draughing)	5 00
Latin and Greek	5 00
French and Spanish	5 00
Music, with use of Piano	10 00
Drawing	2 50
Booking-Keeping	5 00
Common English Studies	6 00
Vocal Music, without charge	
Board (per week)	6 00
Washing (per session)	$20 00
Entire expense of Board, Washing and tuition in the Common English Branches, per year	$350 00

No Lights, Bedding or other Furniture required to be furnished by the pupil. No extra charges of any kind are made above those specified.

For further information or references address the Principal v8-21 3m cop C. FLATT

STOCKTON FEMALE SEMINARY.

THE First Session of this Institution will commence on Monday, March 1, 1858, and continue five months, under the charge of Dr. C. Collins and Lady, assisted by competent instructors.

FEMALE INSTITUTE.

THE Female Institute in Santa Clara, under the management of James Rogers, A. M., still enjoys a good degree of prosperity. The Board of Instruction is ample, and the Terms of Tuition as liberal as in any school of equal grade in the State.

Who Wants a Cheap Piano?

THE subscriber has for years been engaged in the purchase and sale of PIANOS, HARPS, MELODEONS, GUITARS, ORGANS, MUSIC, &c., and, being a *practical musician*, has given entire satisfaction. He buys *directly from the manufacturers*, and is thereby relieved from heavy rents and other expenses. Every instrument sold by him receives his personal attention, is *guaranteed* not only as to *quality*, but as being *cheaper* than it can be procured at any wholesale house in America. A printed list of prices, accompanied by the most unquestionable references, will be sent free to all parts of the world, on application to JAMES M. EDNEY,
56 John street, New York City.

*** Circulars to be had, and orders received at the FARMER Office, San Francisco. v7-22 1y cop

Pioneer Establishment.

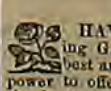
FOR curing of FISH of all kinds; also for the curing of prime HAMS AND BACON. Always on hand, the best articles of Smoked and Pickled Salmon and Herrings, warranted of superior quality, in packages to suit.

The Subscriber is now engaged in Pork Packing, and is desirous of extending the business; for that purpose he will purchase well-fatted Hogs in any quantity.

The Smoking of Beef is also a branch attended to at this establisement.

☞ On hand and for sale—one hundred tons of SALT—Liverpool, St. Quentin, Carobine Island and China Salt, of superior quality. GEO. COOPER,
Front street, opposite Water Works Building,
v9-1 Sacramento.

Fresh Garden Seeds.



HAVING widely extended facilities for obtaining Garden, Field and Flower Seeds, of all the best and newest kinds, we shall have it in our power to offer invoices of the different kinds, and only the best, so that purchasers by wholesale or otherwise, can secure of us at first prices, those qualities and varieties not usually imported.

☞ Orders sent us by Express, with remittances, will be promptly attended to. WARREN & CO.,
v8-15 130 Washington street, San Francisco.

A PICTURE.

[The following production, we have no hesitation in saying, is worthy of Longfellow. Had it appeared under his signature, it would have gone the universal rounds. As it did not, it will probably get no further notice than what it finds here, in the locality in which it originated. It is from the pen of Henry J. McKinley, and was published first in the Daily News. California Express:]

A long time ago,
When the spring-floods were bounding,
And the buds were fast bursting to leaf,
Two children were sporting,
Not dreaming of courting,
Nor thinking of trouble or grief;
And kind were their words,
Oh, sweet little birds!
Like birds they were singing forever;
Then the moon was new,
And the sky was blue,
And the stars looked down in the river.

A long time ago,
When the harvest was coming,
And the whippoorwill piped in the field,
Two lovers were walking,
And whispering and talking,
And each to the other revealed
Sweet things to be told,
But things that were old,
And lovers shall tell them forever;
When the moon was new,
And the sky was blue,
And the stars looked down in the river.

A long time ago,
When the wheat ears were turning,
And the wind came sweet from the west,
Two lovers were walking,
And whispering and talking,
And often they fondly caressed;
But that is not new,
For lovers to do,
And lovers will do it forever;
Whilst the moon comes new,
And the sky is blue,
And the stars look down in the river.

A long time ago,
When the June tree was blooming,
And the tears of the night fell in dew,
Two lovers were walking,
And whispering and talking,
But nothing they said that was new;
For what could be told
Of love that's not old—
Told and retold, will be forever,
Whilst the moon comes new,
And the sky is blue,
And the stars look down in the river.

A long time ago,
When the autumn was coming,
And the leaflets were losing their green,
Two lovers were walking,
And whispering and talking,
As for many a day they had been;
But what did they say,
As the leaves turned gray:
"May God keep us happy forever!
Whilst the moon comes new,
And the sky is blue,
And the stars look down in the river."

A long time ago,
When the winter was blowing,
And the fields wore a mantle of white,
Two lovers were sleeping,
No more they were speaking,
No more in the day or the night;
Oh! all is revealed!
In the cold snow-field,
They sleep—and, forever and ever!
Yet, the moon comes new,
And the sky is blue,
And the stars look down in the river.

HENRY JACOBS.

MERCANTILE CREDIT.—The New York Times has some sensible suggestions in regard to the business firms that have weathered the financial storm, and avers that they are entitled to great credit and encouragement for their perseverance. It says:

It is the duty of a merchant to struggle on while there is any hope of sustaining himself, and he can do so without sacrificing his creditors. It was especially the duty of merchants so to do during the late financial storm, for every suspension then helped to increase the panic, and bring down other houses. There are, no doubt, many houses that bravely struggled through the difficulties of the panic and met their liabilities at a great sacrifice, who would be in a better condition now if they had given up at once, and made a compromise with their creditors; but it would be fatal to mercantile credit, and a most dangerous precedent to establish, if a merchant were to be justified in suspending, when he might, by expending his strength, continue to meet his engagements. The strength of a mercantile house could never be better expended than in making such an effort. The whole framework of the business world rests upon the integrity of merchants in meeting their liabilities, and nothing short of absolute necessity should be regarded as a sufficient apology for their not doing so.

MAN DIES, but nature is eternal. The seasons keep their appointed time; day returns with its golden splendor, and night with its eloquent mystery. The same stars which lit the ghastly battle-field of Troy—rough with the dead bodies of ancient heroes; which shone on the marble streets of imperial Rome, and on the sad eyes of Virgil, sleepless in the living glow of inspiration—the watch fires of the angels, which through centuries of devastation and change have still burned on unceasingly—speak to us as they did to Dante, and Shakspeare, and Milton, of the divine glory, the omnipotence, the everlasting beauty and love of God!

THE cook of Louis XVI was known all over Europe for his mode of serving up eels. His receipt was this: "Take one or two live eels; throw them into the fire. As they are twisting about on all sides, lay hold of them with a towel in your hand, and skin them from head to tail. This method is decidedly the best, as it is the means of drawing out all the oil, which is unpalatable." The consumption of eels as articles of food, throughout Europe, is enormous. In London, the number imported amounts to about ten millions annually; it is food alike for the alderman and the gamin in the streets.

CRAWFORD'S EQUESTRIAN STATUE OF WASHINGTON.—The opinion of G. P. R. James, Esq., having been solicited as to the merits of the equestrian statue of Washington, recently erected at Richmond, that gentleman pronounces it "not only the finest work of art in the United States, but one *as fine as any in the world*—one worthy to commemorate a man whose mind was capable of comprehending that duty is superior to glory, patriotism greater than power."—[Bost. Tran.

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN
AND
NURSERY,

On the American River, 2½ miles from the Steamboat Levee,
SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of
GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of
CHERRY TREES,
THE FINEST AND LARGEST IN THE STATE,
embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being
CORRECT AS TO NAMES AND VARIETIES,
are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of
Shade and Ornamental Trees,
We have a very fine stock of all the leading varieties, some very fine extra large trees of the
ELMS, LABURNUMS AND LOCUST,
particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.
A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of
CAMELLIAS
is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,
Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

v8-18-6m A. P. SMITH.

SAN JOSE
NURSERY.

FRUIT TREES,

ORNAMENTAL TREES,
ORNAMENTAL SHRUBS,
18,000 **ROSES.**

....ALSO....

GREENHOUSE PLANTS,
GRAPE-VINES,
ETC., ETC., ETC.

FOR SALE in lots to suit purchasers. TRADE supplied at a liberal discount.

☞ I have the larest variety of Fruit and Ornamental Trees, Shrubs, Roses, etc., that can be found in any one Nursery in California.

Being determined to sell, my prices shall be very low, so as to give full satisfaction to my old customers as wel as to new patrons.

*** All Orders will be promptly attended to, and the Trees well packed up in bundles or boxes—according to size, and the distance they have to go—and delivered free on board the steamer at Alviso. My Collection of
ROSES
received the FIRST PREMIUM at the State Fair held at San Jose.

My Catalogue, giving a description of each variety I have to sell, and giving information about transplanting, the prices, etc., can be had at the Nursery.* Direct to
L. PREVOST,
San José, Cal.

*The prices in the catalogue are for trees of large size; for smaller ones the price will be greatly reduced, and a still further reduction made when taken by the quantity.

BOOKS, &c.

New Treatise on Land Surveying.
JUST PUBLISHED BY
E. C. & J. BIDDLE,
PHILADELPHIA,

A Treatise on Surveying, by S. Alsop. In this work, the theory is plainly and comprehensively presented; directions for practice are given definitely and precisely; and everything which an extensive business in Land Surveying would be likely to require is embraced. Price per copy, mailed to California, $2, postage included. Price of the KEY to the work, mailed to California, 75 cents.

E. C. & J. B. also publish the following popular educational works, and many others extensively used in the Schools and Colleges of our country: and they would respectfully invite School Directors and Teachers to send for a copy of the descriptive catalogue of their publications:

Crittenden's Treatise on Book-keeping. The series comprises the four volumes below named, and for each of them a KEY, and a set of miniature BLANK BOOKS for the exercises:
1. Treatise on Single Entry Book-keeping.
2. On Single and Double Entry, for Common Schools.
3. do do do for High Schools.
4. do do do for the Counting House.
The volumes are severally the text-books in Commercial Colleges in Boston, New York, Philadelphia, Cincinnati, Chicago, St. Louis, Louisville, etc.; in most of the Normal Schools, and a great number of the High Schools of our country in the Public Grammar and Evening Schools of Philadelphia, etc.; while as a book of reference for practical accountants the Counting House edition is, undoubtedly, the most popular work on the Science of Accounts, published in the United States.

Cleveland's English Literature. *Twenty-fifth Thousand just published.* 1. CLEVELAND'S COMPENDIUM OF ENGLISH LITERATURE, from the 14th to close of 18th century: chronologically arranged: consisting of Biographical Sketches of the Authors, and selections from their works, together with Notes explanatory, etc. 2. CLEVELAND'S ENGLISH LITERATURE OF THE NINETEENTH CENTURY. A sequel to the "Compendium"; arranged on the same plan as it. The above two volumes are text-books in many of the Colleges, in the principal Normal Schools, and in a large number of other first-class Seminaries of our country; and they may with confidence be recommended as an admirable guide or chart for private students of English literature.

Cleveland's American Literature. *Cleveland's Compendium of American Literature,* on the same plan as the author's "Compendium of English Literature," will be published early next year.

Harrison on the Rise, Progress, and Present Structure of the English Language.

The Works of Thomas Dick, LL. D. 10 vols. 12mo. Few books are better adapted for the School or the Family Library, than the works of Dr. Dick.

The Publishers would ask Teachers to examine these works for themselves. Numerous favorable notices from distinguished sources have been received, and might here be appended, but are omitted, with the exception of one letter respecting Parker's Philosophy, and one respecting Porter's Chemistry, referring the reader to A. S. Barnes & Co.'s "Descriptive Catalogue," for any further information respecting the character and merits of any of the works mentioned, and of their publications generally.

Just published—Root's New Work on School Amusements; or, How to make the School Interesting, $1 25.
A. S. BARNES & CO.,
v9 51 and 53 John street, New York.

THE
"HORTICULTURIST"
AND
Journal of Rural Art and Rural Taste.
(Commenced by the late celebrated A. J. DOWNING.)
Conducted by J. JAY SMITH, Editor of the North American Sylva.

THE increasing love of Rural Life has brought this popular publication into extended notice. Its success has been amply proved by a large addition of readers, and it is now offered to public patronage with confidence. It embraces in its scope of subjects everything pertaining to the country and country-pursuits, and aims to instruct while it amuses: it is, in short, as now conducted, a popular RURAL MAGAZINE, designed to interest all lovers of the Garden, the Country-house, the Cottage, no less than the Botanist, the admirer of the Green-house, Conservatory, Grape-house, Fruit Cultivator and Planter. Its correspondents are those who have long devoted their energies to these pursuits, and it is believed the number of these, and the information they impart, is greater than any other periodical can boast of either in Europe or America. Indeed, the work has become indispensable to the well-informed country-dweller, who, by a perusal of its varied pages, may maintain an acquaintance with all that is passing in the fruit-garden and orchard, the nursery, the villa, and with the beautiful in nature, whether it is improved by art or adorned by taste. In its Rural Magazine character it is addressed to all who love information, and it has thus become a welcome guest both in town and country. Its circulation now embraces the entire Union and Canada, and endeavors are constantly used to increase its attractions by a liberal outlay in embellishing it with costly engravings of fruit, dwellings, trees, and those numberless rustic adornments which make the individual home attractive.

A NEW VOLUME (13th year) commences with the January number for 1858: and it will be the constant aim to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style, each number containg 48 pages, embellished with a frontispiece and several other original and well-executed engravings. The volumes, taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature. As an advertising medium it has few superiors.

TERMS—Two Dollars a year; Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the Art. Price, $5.

☞ All subscriptions must be addressed to the Agents, or to ROBERT PEARSALL SMITH,

SAN FRANCISCO, FRIDAY, APRIL 2, 1858.

STEAMER EDITION.

Frost and Rain.

From all parts of the State we hear fears expressed that the peach crop, and even other fruits, have been seriously injured by the late severe frosts. We have examined carefully, not only by personal observation, but by the reliable information from our correspondents and friends, and we are free to say we have no fears but that we shall have *all the peaches we want*. We have no fear of a full crop; the fact is, in all former years, orchardists have almost universally permitted their trees to *overbear*, and often so much so as to greatly diminish the value of their crop, at the same time the fruit was not so high flavored, and this over-crop seriously injured the trees for all future years.

We would earnestly remind orchardists and all who raise fruit, that it is an evil of great magnitude to permit their trees thus to over-bear. We have known many trees to be so much injured by excessive crops, as to die out in a few years afterwards. Any one can observe that when there is an excessive crop of peaches upon one tree, they are neither so large, so high colored or rich flavored as when there is a less number; and we are satisfied that if the present cold weather has destroyed *one half* the blossoms, the whole crop will be the better for it.

There is another favorable feature at the present time, the late rains have come upon the blossoms, the branches and the embryo fruit, so immediately after the cold snap, as to materially resuscitate them, and to give every part of the tree a restorative power; the rain acting to draw out much of the injury inflicted by the frost. This is one of those wise and beautiful laws of nature which should be more carefully observed by those who are cultivators, and to the effect of these rains we ask particular attention.

The Camellia.

We give as we promised in our last, the History and Culture of the Camellia—Camellia Japonica, as it is called—being the Camellia of Japan, and taking its *name* from George Joseph Kamel, as mentioned in that history. In California their culture will differ from all other countries, save Japan. Here we would recommend the open culture, in a situation exposed to the morning sun, only, say to 10 AM; we would recommend cultivating them in a shady place in our gardens. Even under the beautiful Australian Acacia, this would shield them from the direct rays of the hot sun, which destroys the delicate petals of the flowers, besides burning the leaves of the plant, as is mentioned by Loudon; or it will look beautiful if grown as an espalier, upon a wall, the side of a house, or on a fence having a south-eastern exposure. It would then receive only the morning sun, and would bloom in perfection, while our mild climate would secure it from all injury during winter.

Those who desire to grow this plant, will find full directions in this history, and in other information, which we shall be happy to give at all times.

To Our Readers and Correspondents. Our correspondent Edith Montressor has presented a grand theme for our fair correspondents in the Ladies' Department, and we trust it will be responded to by H. E. S.; in fact we can guaranty it; and we will not confine the subject to the fair sex alone, the lords of the soil may refute it if they can. Edith need not fear the length of her communications, they are ever welcome.

"Aunt Bessie's Story" is concluded in this number. It has maintained a continuous strain of interest in each number, and has a moral in it that we trust will be effectual for good. We hope soon to hear more from the same source.

We have a valuable letter from our esteemed correspondent Mrs. Eliza W. Farnham, giving a graphic sketch of a trip in the cars, the benevolent work of John W. Farmer in feeding the hungry thousands, and the plans for immigration west, with suggestions for California immigration. The whole letter is full of interest, and will appear in our next. Mrs. Farnham is engaged, heart and soul, in the good work of aiding destitute women; and at the date of this letter was about to start for Illinois, in company with a party from the society of New York.

Number three upon Sacramento Theatricals is on file for next issue.

We received a valuable letter from Samuel C. Bradshaw, Esq., upon the subject of immigration, which we shall lay before our readers in the next number.

Our correspondent B. comes to us full of interest, startling incident, and amusing facts. He writes with a gifted pen, and his writings always find attentive readers.

A letter on wine making.—We have received a very able letter upon the moral influence of the wine manufactures of our State and country. As it is written in a dignified and able manner, and as it is connected with one great branch of our State's industry and wealth, we shall give place for it in our next. It came to us from an eastern correspondent, last mail. We tender our respects to the writer for his courteous manner in presenting us with this and other matters of information.

"Rhymes for the times, Number 1—The Golden Age," by Agricola, will appear in our next. His letter in this number deserves marked attention.

Pioneer, in this issue, merits the eye of our readers.

A letter on the weather, from James Burney, Esq., received, and will appear in our next number.

Our many friends must excuse us, if all do not appear at once; they shall not be neglected.

The True Work of Legislation.

The *permanent* success of any commonwealth depends upon the fostering care which is bestowed upon the *industrial interests* of that community; and when those who have the guardianship, the protection, the fostering care of these great interests, are true to them, the people are prosperous, contented and happy, and the commonwealth rises in the scale of greatness and glory, just in proportion as these interests are cherished.

When we review the past history of California; when we read the records of her legislation, we feel the truth of this proposition. We note the slow progress of former years, because little or no thought was bestowed upon these interests; when we turn to the statutes of early legislation, even the words *agriculture*, *manufactures*, or the mechanic arts, are not written upon the pages of her statute books; these great interests were not thought of, or, at least, not esteemed of much value, and they were passed by. Had the legislators of '53, '54 and '55, given their first attention to the *workingmen's* interests, and then have given to them that fostering care they so much needed in these early days, hundreds and thousands of men who have been driven by despair from our State, or into some business uncongenial to them, would have been saved from ruin, and to our State; and millions of dollars would have been added to the wealth of mind and treasure of California. If the legislation of early years had granted *one hundred thousand dollars* to encourage home industry, who can tell the amount of idleness and crime that would have been stayed? We ask, in all earnestness, if the legislators of the present year do not believe that such a course would have saved a much greater cost to our State, from the growth of crime which has been produced by reason of idleness, the very result of *not* fostering industry.

We repeat, we believe that one hundred thousand dollars thus spent would have saved more than one half the money which has been expended for the State Prison's affairs. Every wise legislator must know that the best way to *stop crime* is to give *employment* to men, and keep them away from those places where the idle and vicious congregate, and, heaven knows, we have enough such places in California.

It is very evident to all that within a short time a better attention has been paid to the true interests of our State; appropriations have been made to the State Agricultural Society, and to Geology, and often to other important subjects. During the present session we were pleased to see a proposition to aid Overton's Steam Wagon enterprise, and to offer a liberal bounty to the mining interest. This is as it should be. All branches of industry should have the fostering care of our legislature, and we are most happy to notice that the present session is marked by an increased attention to these matters. We are most emphatically in favor of legislative aid to all branches of industry, and even State bounties of the most liberal kind, believing it will prove of the greatest benefit to our State. We hope to see the day, and that speedily, when our Senators and Representatives shall feel it their duty to recognize all evidences of genius and skill, and to do all in their power to bring them into public notice, or as the representatives of the people to foster and encourage everything worthy public commendation.

While in our walks among the mechanics of Sacramento, during the past week, we again visited the Marble Works of the Devine Brothers, on K street, near the Golden Eagle Hotel; we spent some time in examining the beautiful piece of statuary (the work of one of these brothers) that was on exhibition at Stockton. This piece of statuary is worthy the highest commendation. Were Powers or Greenough to have looked upon it they would have commended it. We saw also the splendid *statuette*—a new piece of work just finished, and one of faultless model.

We do most earnestly call the attention of our Senators and Representatives to these most worthy artists, and we would hope that there might be such a spirit of appreciation of genius, such a desire on the part of our own legislators to encourage and foster the genius of our own State, that this noble piece of work could be purchased and placed in the Legislative Hall, as an honor to California, and to the artists, who as simple marble workers are worthy the high name and rank of *sculptors*. This splendid work, the first piece ever executed in this State, would cost only $1000; but the influence of such an act would be worth more than a hundred thousand, for it would call into being genius and skill that now slumber for want of a just and proper appreciation.

Beautiful Flowers.—While we were making a call upon our friend Smith (of Smith's Gardens, Sacramento), the present week, a gentleman called at the office bearing in his hand two beautiful bouquets of wild flowers, which he had gathered upon the prairies near that city. They were composed of some dozen varieties of bright fragrant and early blossoms, and were arranged with most exquisite taste, and with much kindness one of these bouquets were presented to us. To the giver, Mr. E. Parsons of Sacramento, we return thanks for his valued present. It shall be the source of much pleasure to many lovers of the beautiful.

J. H. Still & Co. announce that on the first of June they will issue a new California magazine, under the title of "Still's New Monthly Magazine," to be devoted to literature, art, and mining operations. We gladly offer an encouragement to an enterprise so fraught with good to the interests of our State, and an encouragement to California literature. The work will be issued at the low price of three dollars per year. We shall await the appearance of the first number, to give it more extended notice.

A Beautiful Geranium Tree.

Who that loves flowers has not some fond remembrance of the Rose Geranium? It has been the theme of song, the subject of many a poem, and its sweet-scented leaf has been borne from continent to continent to herald thought and hopes of preference.

What early Californian that loves flowers does not remember the introduction of the Rose Geranium? Who does not remember the one shown at Hart & Davis', on Battery street, price $250, and those small plants, some ten, twelve, or eighteen inches high, that sold at twelve, twenty, and thirty dollars each; but that was five years since. Now the daily sales quote them at two, three, and four bits (see Rountree's sales).

But we have seen *one* Geranium that is queen of all this tribe, and surpasses in size, beauty, and grandeur, any Rose Geranium that has ever been grown, we venture the assertion. And where is this beautiful plant? In our own city, and open to the view of all who love the beautiful.)

Last Sunday we were kindly invited to visit a friend, and look upon his pet garden-spot; we did so, and were surprised to find here, in our city, such a gem of a garden as we found upon the brow of the hill that opens the extreme end of Dupont street, near the water, and facing the Golden Gate—one of the finest views we have found. Here the proprietor has built a home, inclosed his garden-spot with a high, substantial fence, and here we found—how shall we describe what we found; we thought we had seen as fine specimens of every kind of plant as were ever grown, but our vision was made glad by one plant that surpassed all others—a Geranium Tree of majestic yet graceful growth, about *fifteen feet high*, with broad, beautifully formed head, full of fragrant blossoms. This tree surpasses anything of the kind we had ever imagined, although we knew of its luxuriant growth in California. The trunk of this tree was about half the size of a man's wrist, with stout branches, and is about three years old. Beside this tree, some dozen more were trained upon the fences, and were six and eight feet high, entirely covering the fences with a luxuriant and fragrant covering. In this garden also we found fine roses, carnations, picotees, wall-flowers, and very choice fruit trees; and all in perfect order and luxuriant growth; and many other choice things, all grown and cared for by the proprietor and his lady. We cannot fully express how much we enjoyed on that visit. Besides this garden without, we found a choice library within, and a cordial welcome that gave food to the mind and heart as well as to the body. We found, too, in the proprietor, a warm friend to California's best interests; a friend with a highly cultivated mind, a warm heart and generous and just impulses—and he was a *mechanic*, and the warm friend of mechanics, and of all workingmen, and for this we honor him.

Would we had time and space to tell all we saw, but not now; we have more, much more, to say of this true friend of the honest working man's intrests. But, reader, do you know this friend of honest industry? If you do not you should, that you may honor him as we do. Do you wish to see this wonderful Geranium Tree? then go to the end of Dupont street, to the yellow cottage, the last on the right hand, and in that pretty garden you will find it. Ask for the residence of Mons. Bauer, the gunsmith, and you are sure of a welcome and kind reception, for from himself and lady you will be sure to receive it.

Continuous Acting Pumps for Deep Wells.—We have made a visit to the store of Mr. Paxson, to examine the glass working model of one of these Pumps, and we confess ourselves much pleased with it. We examined its operation, and we do not hesitate to pronounce it one of the best Pumps yet introduced into California. For farmer's use, for stock ranches, fruit orchards and gardens, it is most excellent. We want pumps with great power, so that we can throw water over and upon the tops of fruit trees and plants, and thus wash them like a natural shower. We wish those persons that need pumps, would visit Mr. Paxson's place of business, and examine for themselves. Mr. P. has the one now advertised with us, on exhibition at his warehouse. We give below a certificate of approval, and we have also received a letter from an experienced party, relative to these pumps, which we shall publish hereafter:

Fort Vancouver, January 20, 1858.

Jos. S. Paxson, 48 California street, San Francisco—Dear Sir: The Patent Double-Acting Lift and Force Pumps, furnished this post, through Messrs. Allen & Lewis, your Agents in Portland, give entire satisfaction, and they are, in my estimation, superior to any pumps I ever used.

The Deep Well Pump, Number 10, raises water from a well one hundred and ten feet, and works so easily that two men readily pump a barrel full in a minute and a half, and by attaching the hose, they throw the water in all directions fifty or sixty feet.

It gives me much pleasure to add my testimony in favor of your Improved Pumps.

Yours, &c., Rufus Ingalls, Capt. U. S. A.

Thanks.—We return thanks to the Alta Express, and to Freeman & Co., for editorial parcels and for papers kindly sent us per steamer.

To Mr. McGuire also, for Forney's Philadelphia Press, Irish News, and the Citizen. Mr. McGuire is agent for these papers, and is ever prompt in their delivery to his patrons.

We have received, in addition to literary food of the best kind, *beautiful flowers* from numerous friends. Those from Caro, from Lilly, from Smith's Gardens, and from Mr. Parsons, were all most grateful. We do fully appreciate such favors, the givers know we value them.

That little parcel, too, from our friend Smith of Sacramento. How delicious were those Cucumbers; how refreshing to the palate, after hard work.

New Books.

Received from the publishers E. C. & J. Biddle, Philadelphia, the works of Thomas Dick, L. L. D., in 10 volumes, 12mo, sheep, comprising:

1. *The Philosophy of a Future State.*

2. *The Christian Philosopher*, or the Connection of Science and Philosophy with Religion.

3. *The Philosophy of Religion*, or an Illustration of the Moral Laws of the Universe.

4. *On the Improvement of Society*, by the Diffusion of Knowledge; or an illustration of the advantages which would result from a more general dissemination of rational and scientific information among all ranks.

5. *The Mental Illumination and Moral Improvement of Mankind*; or an inquiry into the means by which a general diffusion of knowledge and moral principle may be promoted.

6. *An Essay on the Sin and Evils of Covetousness*, and the happy effects which would flow from a spirit of christian beneficence.

7. *Celestial Scenery*, or the Wonders of the Planetary System Displayed; illustrating the perfections of Deity, and a plurality of worlds.

8. *The Sidereal Heavens*, and other subjects connected with Astronomy, as illustrative of the character of the Deity, and of an infinity of worlds.

9. *The Practical Astronomer*; comprising illustrations of lights and colors, practical descriptions of all kinds of telescopes, the use of the Equatorial Transit, Circular, and other astronomical instruments, a particular account of the Earl of Rosse's large telescopes, and other topics connected with Astronomy.

10. *The Solar System*, with moral and religious reflections, in reference to the wonders therein displayed.

We have briefly alluded to the description of these works, as it will be impossible at the present time to go fully into the merits of each, and shall take occasion to review the works separately, after a careful examination.

The author is well known, as one of the most able writers upon the above subjects, and his works have been extensively read, both in Europe and America. Each volume has been carefully revised, and many additions made to every department; several of the works have been re-written, and enlarged to nearly double their former size. Many new engravings have also been added, and all the latest discoveries of the Arts and Sciences, are embraced in these volumes, which will render them truly acceptable to the whole public. These works are fully adapted for the use of schools, as well as families, and the type is much larger than the 8vo edition.

Great labor and research have been bestowed to select and arrange the facts which are given in the above valuable works, and properly condense them, in order to find the proper material, and the author feels assured they will not only be highly instructive, but entertaining to readers of all descriptions, and especially to the Christian world.

MAGAZINES, ETC.

Received from the publishers, Messrs. Leonard Scott & Co., the re-publication of the London Quarterly Review, for January, with a valuable amount of literary matter. It contains eight articles, viz: Difficulties of Railway Engineering, the Historic Peerage, Tobias Smollett, Wiltshire, Church Extension, Sense of pain in Man and Animals, Woolwich Arsenal and its Manufacturing Establishments, and the continuation of the able articles on Our Indian Empire. These series are of a deeply interesting character, and should be carefully read.

Eclectic Magazine for March, from the publisher, W. H. Bidwell, New York. This number is embellished with two portraits of renowned personages—the Emperor Nicholas, and Lord Lyndhurst in his robes of office as High Chancellor of England; these are admirably engraved and reflect great credit upon the artist, Mr. Sartain. Among the valuable articles, some twenty in number, we notice: Biographical sketch of the Emperor Nicholas, Dr. Livingston's Researches in South Africa, the Handwriting on the Wall, Siege of Lucknow, the Angel in the House or Patmore's Poems, Lord Lyndhurst, etc. This is one of the best numbers yet published.

These all come filled with treasures for the mind, and we trust such works will find their way into our families, for such periodicals should take the place of the *trash* that now floods our land.

Godey's Lady's Book for April, edited by Mrs. Sarah J. Hale, appears in beautiful style, with many rare engravings and plates of fashions. The Lady's Book is rapidly gaining favor.

Frank Leslie's Journal comes to us much enlarged and improved by the addition of the department of fashion, and is now an elegant family magazine, worthy the patronage of every community, and especially ladies that are under the reign of this king of laws, *fashion*.

Blackwood's, and Harper's, are full of solid literary food, and most worthy of note among all who desire useful reading.

New Invention.

We have received from the inventor, C. H. Topping, of Bridgehampton, L. I., a model of his "Regulator" for horse-powers, &c. Drawings are also received, showing how it is attached to the power. Its action is an automatic operation of the brake, pressing it to the wheel when the speed is too great, and withdrawing it when the speed is sufficiently checked. It thus prevents undue speed, without reducing the power, when moving at the proper rate. It is driven by a small band passing round a pulley of the shaft of the band-wheel, or any other convenient place. The chain is connected to the brake by a crank rod, extending across the power, or in any way which convenience may dictate.

The invention has been fully tested at the East, and proved one of real practical value. It should be applied to every railway horse-power, as it renders them as good for all kinds of work as a steam-engine of equal power. The model can now be seen at our office, where all interested are invited to call.

Happy Children.

What a contrast in *little* children; yes, just as much as in *big* ones. We have many opportunities of witnessing the conduct and disposition of *little* children, as we travel over the State, and up and down the Sacramento and other great thoroughfares. As we came down on the Sacramento boat one day the present week, there was as glorious a group of children as we ever saw on one trip. The number we do not know exactly; but Captain Pool, a good scholar, quick at figures, *guessed* about seventy-five. We don't vouch for that number, but there were enough of them, especially the crying ones.

It is a most interesting study, to watch these different children, to see their unfolding dispositions; and it is no ordinary study to watch the different modes of treatment of all children by their mothers and fathers. We say mothers and fathers, yet it is seldom that the care of children devolves on any save the mother; and what a responsibility! How few understand this responsibility; how few appreciate it. We often see examples of such misgovernment and mismanagement as would make angels weep; for, like the beautiful young plant of tender growth, its beauty, fragrance or fruit depends entirely upon the tender culture it needs; but it is treated with harshness, with even rudeness, and sometimes with brutality. But there are bright contrasts to this, and we sometimes see such examples of faithful, devoted, and affectionate control, as to give us great hope of the future.

To those who observe the wonderful development of physical beauty, in children born in California, there must come the hope for a due regard for the high moral and intellectual culture of such children, as there can be no question but that a new era will dawn upon California, in a race of men that shall be an honor to the American name, when there shall be as much of an increased attention paid to the culture of the mind as there is evidence of improved powers of the physical man; and this must be looked for in the better attention paid to female education; for when we shall have a race of highly educated mothers, we shall have no fear for the correct education of the sons.

These remarks were awakened in our mind by the circumstance of the number of children we saw on our downward trip first alluded to; and on this occasion we were deeply interested in the case of a boy of remarkable size and great physical beauty—the picture of health. This child was a joyous creature, and yet but a little over a year old, was under the complete control of his mother, whose affectionate and watchful care was ever manifest for his good. We were particularly struck with the perfect control which the mother had over the child; a word, a look even, and implicit obedience was the result; and it was always with a smile. At first we wondered at this perfect control; a moment's reflection gave us the cause: that mother felt the responsibility that rested on her, and knew the happiness of the child depended upon its *obedience* to her wishes, and her law was the law of love. Every command was given in a gentle tone, and with an affectionate smile. How potent the law of love! As we gazed upon that mother and child, and upon the sister of that mother, to whom also the child was much attached, and as we saw the same noble attributes of character there, we were cheered with the confident hope that this beautiful *young lady* fully appreciated the law of love among children—all her future influence must be good. Would that such examples of correct training were more frequent in this our land of promise.

The Spirit of the Times.

Having partaken of a hearty meal, we were looking over our exchanges to find something to amuse us, and save us from suffering from indigestion, when our eye rested upon a flourish of the pen of some tremen-di-ous writer in the Spirit of the Times, who seems to come down on the Farmer with the same fury that a certain *giant* made the attack upon the windmill. After his fury was abated, and he had resumed his breath again, he says, probably the Farmer will "*Lay it down.*" Live what down, sapient knight of the quill? Surely you have amused us, and the hearty laugh you gave us completely scared away all thought of indigestion. Why, sir knight, you remind us of the time when a certain expert swimmer tried to take passage in the safety-boat of the antediluvian ship-builder, but, being rather cavalierly treated, he exclaimed, "Get along with your old ark, Mr. *Noah!* I don't think there will be *much* of a shower."

"Should Auld Acquaintance be Forgot." Passing up Washington street this week, our attention was arrested by the words which we have quoted above, and which we saw swinging upon the sign of the music store of Kohler & Co. Who could read these words and not have the blood move the quicker, as these words recall those moments of the past that are dear to memory. We do not think a more appropriate sign was ever invented for a music store; it was a happy thought of our friend Kohler, and we believe many a purchaser will drop in and buy some well remembered song, by reason of these most appropriate words. Friend Kohler, this is what we call a "lucky hit," and many of your songs will echo over our hills and valleys by reason of it.

Messrs. Otis V. Sawyer & Co.—We call the attention of our readers to the Shoe-finding establishment of the firm named above. This house we believe is the main house of this city, being complete in all "findings," and offering some of the best Leather yet made or known on this Coast. Messrs. Sawyer & Co. are old residents, pioneer merchants, and should receive particular attention from the community; see their card.

Messrs. Main & Winchester.—The proprietors of this excellent house, engaged in the saddlery business, on Battery street, are increasing their manufacturing very much, and the quality of the work offered by them is worthy of special notice.

Death of Freeman Hunt.

The last steamer from New York brought us the above sad intelligence. Mr. Hunt was the editor and proprietor of Hunt's Merchants' Magazine, which was originated by him nearly twenty years ago, and has been conducted with marked ability and success under his careful and judicious management. He has been known to the world in the field of literature for many years, having been successful as an author, as well as publisher. He has written and issued during the past three years, "The Lives of American Merchants," in two volumes; also a volume entitled "Worth and Wealth; both of which were ably written, and enjoyed a large circulation among readers of all classes. Mr. Hunt was born at Quincy, Massachusetts, in 1804. He established in Boston the first Lady's Magazine ever published in the country, under the editorial charge of Mrs. Hale, now editor of Godey's Lady's Book; he also published in Boston a juvenile paper, at the same time being interested in other prominent publications, until his departure for New York, when he issued his first work on "the Hudson River." He then started the Merchants' Magazine, which has obtained a popularity unprecedented, until his decease.

He was deeply interested in mercantile literature, and his work was the first which ever gave tone and awakened the minds of American merchants to the true importance of the subject, which should redound to *his* credit alone. Although not a brilliant writer, he was possessed of fine education and deep learning, and paid scrupulous attention to his business, which placed him in prosperous circumstances. His death has caused a deep regret in the whole mercantile and literary community. Had he lived his name would have been recorded still higher in the annals of literature and art, "but the body once active with life is cold in death, the voice is silenced forever," and the irrevocable doom has been passed upon him: "Dust thou art, and unto dust thou shalt return."

Rain and mud in Sacramento.

The rain-storm at the Levee City was long and very severe, and although it has checked the business of the city and made the streets exceedingly uncomfortable for a time, it will add so much to the beauty of the country, that the little inconveniences of clouds, mud, a wet coat or wet feet, are as mere trifles.

J street, the great thoroughfare of Sacramento, has very recently been graded, and of course is more than usually muddy. The crossings are bad, but these could be remedied if the citizens or merchants would employ a man at trifling cost to keep them passable, especially for ladies. We noticed some of the crossings were very bad, particularly that on the corner of Seventh street and J. Now we wonder at this; for there is Dr. J. L. Polhemus, druggist, one of the oldest Pioneers, and we believe the only druggist in Sacramento, that has been seven years in one place, as a business man, and steadily pursuing his business, without any other change than a largely increased business. Then opposite, Messrs. Culver & Powers, and on the other corners Messrs. Sneath & Arnold, and Messrs. Lindley & Hooper; all, the long established merchants, and doing a splendid business. Being houses of influence, we hope they will set an example to all, and have good crossings. Come, gentlemen! see this done; set the work going; others will follow your good example, until the whole city is cared for.

The Athenæum at Sacramento.—Mrs. Anna Cora Weeks, editress of the Athenæum, is paying a visit to the "Queen City of the Plains," and although the weather has been stormy since her arrival there, a remarkable degree of success has attended her efforts. Mrs. Weeks has been cordially received by the citizens, a liberal patronage promptly and most cheerfully given, many citizens, both ladies and gentlemen, voluntarily calling upon her at the "Dawson House, to greet her and enroll their names. We clip the following very gallant and just notice of the lady from the Mercury of Wednesday, the new paper, and add we are truly rejoiced at the lady's success:

The Lady Editor.—Mrs. Cora Anna Weekes, the accomplished Editress of the Athenæum, is now on a visit to this city. We have not been favored with a copy of the periodical referred to, but from our knowledge of the talent of the conductor, we can safely vouch for its literary character. As some of our editorial brethren in the interior may have curiosity to know how an "Editress" looks, we will simply inform them that this lady is very handsome, and apparently some twenty-three or twenty-four years of age. Her features are of the Grecian cast, and finely molded, and there is an air of intelligence about them that strikes one very favorably. In her movements she is quick, and in conversation animated. Her dress is simple, but neat and elegant, and everything about her betokens the true lady. We are mournfully compelled to inform our bachelor friends that the Editress is married, and well married. We most heartily commend the production of this welcome laborer in the editorial vineyard to the notice of our citizens.

☞ **Thanks.**—

From the Collegiate Institute:

Allow me to return our sincere thanks to the following gentlemen for favors to the Collegiate Institute at Benicia:

To Col. J. L. L. F. Warren, editor of the California Farmer, for a case of Agricultural Books, presented as the nucleus of an Agricultural Library.

To Major McDaniels, for valuable Public Documents.

To Hon. Charles Sumner, for package of Public Documents.

To T. R. Mosely, Esq., Wells, Fargo & Co.'s Messenger to Stockton, for a full collection of samples of the various strata passed through in boring the Artesian Well at Stockton.

12tf C. J. FLATT, Principal

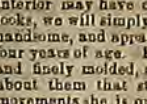
Loudon's Encyclopedia of Plants.

COMPRISING the specific character, description, culture, history, application in the arts, and every other desirable particular respecting all the Plants indigenous to, cultivated in, or introduced into Great Britain. New edition, corrected to the present time. With **3000 Engravings.** By MRS. LOUDON. One copy received and for sale at the Farmer office. 12

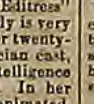
To Let, With Board,

ONE SUITE OF FOUR ROOMS, suitable for a Family—in VIRGINIA BLOCK, corner of Stockton and Pacific streets. Possession given immediately. 12 References exchanged.

JONAS G. CLARK & CO.,



IMPORTER AND *MANUFACTURER* ....OF....



FURNITURE,

128 Washington street, SAN FRANCISCO.

WE ARE NOW MANUFACTURING OUR FINEST FURNITURE, and would invite the attention of the public to OUR PRESENT STOCK, *The Largest ever offered on the Pacific Coast.*

12 JONAS G. CLARK & CO.

The Flour and Grain Market.

Where now the scarcity? Every effort to keep prices will fail, and those who have sent Flour to this State from the East, to arrive in June, will not make a fortune. That lot of Gallego and Haxall, for which $20 was paid to arrive, was not much of a speculation.

We asserted that Flour would be sold on the 1st of April, at $12; the public sales gave $12 25; not far out of the way. The 1st of May will give a much less figure; the 1st of June still less, and on the 1st of July, down to the old mark. Our deepest regret arises from the fact that those farmers that have aided in making false prices, have much injured their own prospects for the next harvest, for from every section of the State we have a sure knowledge of a large increased breadth planted, and we *know* that those who have planted as they ought, will reap a glorious harvest.

We shall have a bountiful harvest, in spite of all the croakers in the land. Examine the pages of our journal, and see who has been the true prophet.

Fatality attending Statues and Monumental Works.—By the loss of the ship Flying Dutchman, from this port to New York, the beautiful marble slab, prepared by the miners of Columbia for the Washington Monument, has fallen into the deep or been swept ashore among the fragments of the ruins of that splendid clipper. When we recall the recent loss of the statue of Daniel Webster, Crawford's Adams, Power's Calhoun, and also several others of late years, we cannot but feel that a strange fatality attends the transmission of all such trophies or emblems of greatness. These reflections speak the great truth that man must *live* by deeds alone.

To Our Friends on the Steamer.—We welcome you to California. If you are "Old Californians," we welcome you. If you are "new comers," we welcome you; and as you read the pages of the Farmer, while you are nearing our shores, we hope when you arrive, and become citizens, we shall meet you every week.

Pulu—Pulu.—See this famous article, made into matresses, by Schreiber. Buy a *pulu* matress, and you are safe almost from fleas and all other insects.

SPECIAL NOTICES.

☞ **Wigs! Wigs!! Wigs!!!**—BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.

v8-13 1y 233 Broadway, New York.

☞ **A. W. FABER'S LEAD PENCILS.**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not failed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York."

v9-1 6m E. FABER, Sole Agent. 133 William street, New York.

☞ **A Syllogism!—**

Proposition 1st.

Every Lady and Gentleman desires a beautiful head of Hair.

Proposition 2d.

The use of **LYON'S KATHAIRON**, will, without fail, produce such an one.

Therefore:

Every Lady and Gentleman will, of course, immediately commence using Lyon's Kathairon. All pronounce the Kathairon to be the finest and most agreeable preparation for the Hair ever made.

Its immense sale—nearly 1,000,000 bottles per year—attests its universal popularity. Sold everywhere for 25 cents per bottle.

HEATH, WYNKOOP & CO., Proprietors and Perfumers, 63 Liberty street, New York.

PARK & WHITE, Wholesale Dealers, *San Francisco, California.*

☞ **Efficacy of the Oxygenated Bitters.**—From J. C. Dunn, Esq., late City Treasurer:

Boston, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say I have received more speedy and effectual relief from the use of the *Oxygenated Bitters*, procured from you, *than from all others remedies*, and most cheerfully recommend them to all who suffer from a similar affliction.

Yours truly, JAMES C. DUNN.

Numerous certificates have been received from citizens of the highest respectability. Every dyspepsic will be amply repaid for a trial of this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. Morrill, cor. Third and K, sts., Sacramento; H. Johnson & Co., Washington st., San Francisco. 9-1m

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**

Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1840, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of

WILLIAM A. BATCHELOR, v8-13 1y 233 Broadway, New York.

HOTEL INTERNATIONAL.

San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present Lessee and Managers,

A. S. HALEY,

JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most POPULAR PLACES OF AMUSEMENT, THE PRINCIPAL THOROUGHFARES, THE FASHIONABLE PROMENADES, AND STEAMBOAT LANDINGS; thus rendering it at all times the most

DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen, during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, Lessee.

Assisted by: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

WHEELER & WILSON MANUFACTURING COMPANY'S

SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stitches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as Woman's Friend.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

AMBROTYPES, PHOTOGRAPHS, Daguerreotypes and Melainotypes.

VANCE & CO.,

Corner of Third and J streets,

(Hiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerreotypes and Photographs**, as heretofore, in a manner *UNSURPASSED ANYWHERE.*

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,

9-2m Sacramento.

Wanted,

A SITUATION AS FARMER AND GARDENER,

BY a Man who perfectly understands his business in each department—the Growing of Root Crops, Grains, &c., according to the best systems of Agriculture; the Reclaiming of Waste Lands, Underdraining, and the Working of all Agricultural Machinery, the buying and selling of stock, and all agricultural produce; has had good experience in raising blood stock, keeping farm accounts, &c.

Gardening in all its various branches; forcing of fruits, the management of fruit, flower and kitchen-garden, the erecting of agricultural and horticultural buildings, laying out of new grounds, the entire routine of Orchards and Vineyards, has conducted Market Gardening extensively; also the Dairy Business.

The best of reference can be given as to capability and moral character. Has had eleven years' experience in the States, managing first-class places. Letters addressed to Mr. Warren, editor of the Farmer, will be attended to. 11-1m

Landscape Gardener.

THE undersigned offers his services as a Landscape Gardener. Designs made for Parks, Lawns, Carriage Drives, and fine Garden Plats, in the latest style of Gardening, for city or country.

The advertiser is permitted to refer to Editors of Farmer where letters can be left for him by those that wish his services. J. TAYLOR,

5 corner Stockton and Sacramento streets.

Ladies' Department.

OVER THE WAY.

BY CHARLES MACKAY.

When cold-hearted Poverty knocks at my door,
And robs me of blessings I gathered before,
Takes a glass from my table, a coal from my fire,
And robes my dear Nelly in meaner attire,
I envy sometimes in the heat of the day,
My very good friend who lives over the way.

But when I sit down at my pleasant fireside,
And count o'er the joys I was never denied—
My sweet little wife, and the babes at her knee,
My health and my conscience unsullied and free—
No longer I suffer my wishes to stray,
Or envy my friend who lives over the way.

He's wealthy, but feeble; he's titled, but old;
His son is a spendthrift, his wife is a scold;
Suspicious of others, ill pleased with himself,
His only delight is to reckon his pelf.
Were he ten times as rich, I'd refuse, night or day,
To change with my friend who lives over the way.

Though Poverty, frowning, peeps in at my door,
I'll neither be beaten nor vainly deplore;
I'll scare him away by hard work if I can,
And look in his face with the heart of a man;
And, living at home all the joys that I may,
Forget my poor friend who lives over the way.

[For the California Farmer.]

AUNT BESSIE'S STORY.

BY HER NAMESAKE.

[CONCLUDED.]

"There's nothing ill can dwell in such a temple."
[Tempest.

"It's, methinks, a morning full of fate."—[Johnson.

I felt I was undergoing a merciless scrutiny from a pair of large black eyes, which were making acquaintance with mine; but just that moment, my companions coming up relieved me of my embarrassment.

"Ah Jack, my fine fellow, how are you?"

He advanced and raised his hat; they shook hands cordially.

"Miss Turner, allow me to present my friend and fellow student Mr. Sibley, and this is Bessie Hoyt, my little niece."

Little niece indeed! how that word grated on my ear; was I not almost fifteen? But I said not a word, dropped a distantly polite curtsy and soon my thoughts were, or I pretended they were, engaged in the really beautiful scene before me. My friend went off into ecstasies, of course, and the three, seating themselves on the bank, discoursed, with a wonderful knowing air, of poetry and the fine arts, and a great many other things, which I thought had a good deal of *moonshine* in them. They were good French scholars, and my little smattering enabled me to keep a tolerable run of the conversation. It was too deep for me, however, and I concluded I would appear best to take the part of a listener. Much as the place interested me, as being one where my own dear father had spent some of his happy childhood hours, I could not long remain insensible to the peculiar fascinating spell which, unconsciously, the charming stranger had thrown around him. He appeared about eighteen years of age, was well dressed, tall and stout, with eyes and hair as black as night, a fair and ruddy complexion, and a smile played about the finely curved lip, that was perfectly irresistable. For the first time during my long eventful life, I was made aware that I possessed such a thing as a heart. We returned by a nearer path, and found the household greatly surprised at our long absence. Dinner had waited—had been cleared away—but we were not at all hungry or fatigued, and begged aunt Edith not to trouble herself. She was a wonderful adept at divining causes and effects, and soon a second appeared on the table. After the usual ceremonies of the toilet, we all sat down and the French was resumed. But with those great black eyes staring at me from across the table, I forgot my French and my appetite.

It was not until after his departure we learned he was the son of the old gentleman who accompanied us from C———, and that he lived in the elegant house we had admired so much. A horrifying sense of my rudeness to his father crept over me, and I soon excused myself and stole to my room to give my troubled heart relief in a flood of tears.

The days glided by, each bringing in its round something new to amuse and please us. I was not long in discovering a growing attachment between uncle Harry and Miss Turner. At first I thought she avoided his earnest gaze, but at length she became less timid, and I could not but smile at the little skirmish of tender glances between them. Her affectionate heart, chilled with the coldness it had met with since the death of her kind parents, glowed again with its natural warmth, under the influence of such kindness, though I knew her pleasure suffered some alloy from the consciousness that there was a barrier raised between her and the dear delights of home and kindred. Their friendship grew without either knowing or conceiving that a softer passion might succeed. As he gradually became acquainted with her history, he felt no less a measure of sympathy for her, and a desire to alleviate her sorrows, than she a lively sense of gratitude to himself.

It was not unfrequent that we went out after tea to enjoy the soft evening air. The moon was at its full, and shed its silvery radiance upon the old green woods, and diffusing over the broad fields a softness of hue which Millie likened to "fairy land."

"You had better pray the gods to convert you into a fay, you are so enchanted," said I sarcastically.

I was becoming alarmed by the undue attention her gentleness elicited, and possessed no art to conceal anything that displeased me; and on several occasions when we were alone, replied in cutting sarcasms, which stung her sensitive heart, and once in cold rebuke which nearly broke it. When Harry was present I tortured myself by playing *l'amiable;* but once I quite lost the equanimity of my temper. It was one evening when we had strolled to the bank of the little creek, and seated ourselves beneath an old grape-vine, whose leaves and tendrils formed a complete canopy over our heads. The stars shone clear, and bright and soothing silence reigned o'er the spot, distilling its balm gently upon the spirit. The little brooklet danced gaily onward, and seemed to say, "now talk what you please, I do'nt hear you."

For a moment I forgot my bitterness, and during a long pause in the conversation, thought I would venture a little sentiment:

"What a glorious night; see those clouds piled up mountain high, floating away to dip their edges in the golden dyes of"—I descended to earth, and looked round to discover the effect of my eloquence on my audience.

As I live! their lips had just parted! They had not heard a word I said, and their eyes were blind, save to one shape of beauty; their ears insensible to the music of the rippling brook or rustling leaf. What jarred upon my fine sensibilities the most was to know they considered me *nobody*; for in the presence of strangers, or even when alone with aunt Edith and grandfather, they were as distantly polite as though they never met in secret to talk of love, or even thought of such a thing.

One night about a week after the foregoing incidents occurred, I was awakened from a beautiful dream (in which a pair of black lustrous eyes figured very conspicuously) by the door adjoining mine opening and shutting, and some one stepping out into the hall and descending the stairs. Thinking some one might be ill, I became uneasy, and arose with the intention of speaking to aunt Edith. Her apartment being on the first floor, it was necessary to pass the whole length of the hall. In descending the staircase I became riveted to the spot, on seeing a man in an unearthly-looking garb, pass between me and the rising moon, whose soft light streamed in through the unprotected panes in the glass door. I thought of house-breakers and midnight robberies, and my heart thumped against my ribs until I was afraid the assassin might take alarm from its violence. I was about crawling on to aunt's door, for stand upon my feet I could not, when I ventured another look at the spectre, or robber, or whatever else he might be. As he passed to and fro, his huge shadow darkened the spot where I sat. His dress seemed particularly suited to his vocation; but just then he raised the old cap, and an eye the least on the alert for disguise could have penetrated his, for the dark locks of Harry fell in clusters over his forehead. It was some moments before I could dissuade my throbbing heart it had nothing to fear; and then I was provoked that he should thus, though unconsciously, have given me cause of alarm. It might be poetry, but I thought there was little religion in exposing oneself to the damp night-dews. Unfortunately I was in an extremely unpoetical state of dishabille, or I would not answer for the sudden interruption of his star-gazing reverie. I stole back to my room fully resolved to keep all these sayings and doings in my heart; but as I heard, for an hour after, the continued tramp, tramp, beneath my window, a new light broke in upon me. It was not like a sunbeam, for darkness and bitterness succeeded.

Can it be possible? questioned I. Ah yes! it must be so; he is in love with Millie. What, *he!* the godlike? whom I had fancied linking his destiny with some giant mind like his own! Oh it cannot be—it must not be! I will tell him she is nothing but a poor orphan, dependent upon the charity of an only uncle, and he a miser.

Tramp, tramp, tramp. Why your shoes must be made of the same material as the "Wandering Jew," for we don't read anything about their ever wearing out. Oh! I wish I could get a handful of gravel in them.

With the dawn of morning my resolves passed away; for as I gazed into Millie's sweet pale face, my old affection returned, and I concluded to let things take their own course, and to intrude as little of my society upon them as possible.

"Her voice was ever soft,
Gentle, and low—an excellent thing in woman."—[Lear.
"Grace was in all her steps, Heaven in her eye;
In every gesture, dignity and love."—[Paradise Lost.

A dull mist kept us within doors the following day, and a something dull and damp clung around my spirit, making conversation irksome. I stole, unobserved, from the drawing-room, leaving my two friends in a very lover-like proximity, and joined aunt Edith in the little "east room," where, with busy fingers, she was assiduously plying her needle upon some torn garment. Her calm, tranquil face was, I fear, quite in contrast with my own, for she rallied me on my dull looks, and, with her usual tact, essayed to enliven my spirits. I took a seat on a low ottoman at her side, and I remember at this moment how angel-like she looked; indeed, when I forget it I shall be in my grave. I looked into her countenance, which, though not possessing beauty, owned the utmost degree of sweetness, intelligence, and benevolence. There was that indescribable something about her which was so *divinely* beautiful, so radiantly lovely, that my heart sprang to her with a bound. I heeded not how time flew; the hours were as moments, and the moments as hours. I was told more of my own life than I knew myself; and little anecdotes pertaining to myself were called up, which were long since forgotten, and which, viewed through the kaleidoscope of memory at this day, seem like some beautiful oasis on life's arid desert. Her ideas of what is technically termed "high life," were very much in contrast with mine. Her well regulated mind shrank from ostentatious display; and devoting time to the claims of the gay world (which she said might be better employed), was alike distasteful to her; while the blessings which wealth conferred were properly appreciated and employed.

As we became better acquainted, a mutual confidence spread its charms over our interviews. I was assiduous in my efforts to please, and she pleased me without an effort. Once only, when we were alone, sitting on the bank of the little rivulet, which ran tinkling dreamily along at our feet, she spoke of herself.

The cup of life's happiness had been dashed from her lips ere she had scarcely tasted the exhilarating draught. A just God had ordained she should tread life's pathway alone, for He had removed, in his youth, the husband on whom she had lavished all the rich affections of her heart. No tears were seen streaming down her cheeks; calmness and resignation were visible, while only a slight quiver of the lip betrayed a grief deep-seated, too deep to vent itself in tears.

"I find," she said, as we arose to depart, "a strange sweetness in that clinging faith, which faith never tried, never knows; and had not the anchor been well placed, the storm which assailed my early life might have beated the sweet angel of hope from my path."

How my conscience smote me for the reproachful feelings I had entertained on my arrival.

Day after day strengthened my affection for her. I gazed into her sweet face, and was happiest when sympathizing with a spirit which seemed nearly allied to the divine. Her mornings were somewhat occupied superintending the household affairs, and they, of necessity, were numerous. I begged permission to assist in making myself useful in various ways; after which I would sometimes repair to the library, and select something from among the numerous volumes with which the ample book-case abounded. I usually looked for the gay covers (red and gilt were my favorites), but of these only a few were to be found, while the huge, musty, calf-bound were without number. I wondered if anybody ever read them! and thought the greatest penance that could be imposed upon me would be to read *one*. The walls were low and dark; the ceiling painted to represent live oak, and the little bronze shepherd and shepherdess on the mantlepiece looked as if they might have fed their flocks on the plains of Padan Aram. Over these hung an old oil painting, of which I remembered to have heard my father speak; one which he had purchased in Paris, and was considered a relic of some considerable value. I could see nothing remarkable in it, except it might be its great age; and I must say, "Old Time" had done the handsome thing by it. A very dark mountain in the back-ground, with "Old Sol" bidding the beholder good-night, was all there was of it. Here, too, hung the family portraits. My sainted grandmother looked tenderly down upon me, from a heavy frame of carved mahogany; and while gazing upon that, visions of heaven filled my imaginative mind.

One day, when we had been there about a week, I said to grandfather, as we were seated in this room enjoying a delightful sunset scene:

"Grandfather, why do you have this old cherry table sitting in the centre of the room? If it were not for *this*, with its worn oil-cloth covering, and that old splint-bottomed chair in the corner, the library would wear quite a modernised aspect. The garret is the only fit place for them."

Oh dear! you should have seen the half quizzical, half serious look he gave me. I was sorry I had said it; for I remembered it was a family characteristic, a love almost amounting to veneration, for anything ancient or old-fashioned.

"Oh! my dear," said he, after a few moments painful silence, "you have unconsciously touched in my heart a string which awakens many old but not unpleasant memories. The freshness of youth, the sweet spring-time of life, comes back, when no cloud marred the bright disc of my morning sky. In a moment's time I have traveled over the many years that have intervened, and the faces of some who have occupied that old chair, or been gathered around this quaint old table, are as fresh in my memory as they were seventy years ago. Aside from their being family relics of great age, there are a few incidents connected with their history, which enhances their value not a little. I well remember, during 'the time that tried men's souls,' of meeting, in my father's drawing-room at Boston, such men as John Hancock, Samuel Adams, Ben. Franklin, and others, whose names are enrolled on the page of fame. After the memorable affair known in history as the battle of Lexington, when the town was invested by an army of twenty thousand men, and surprise, panic, and consternation were succeeded by the shout of preparation and call to battle; it was then not unfrequent that our house became the rendezvous of noble hearts; and that old table, drawn up before a blazing fire, bore on its shining fan, bottles of good cheer, set out in honor of those noble patriot chiefs."

He was walking up and down the room, and had grown enthusiastic in recalling those scenes in which members of his own family had taken active part, and the tears were choking his utterance, when he laid his hand upon my head and said: "That old splint-bottomed chair, Bessie, is older than I am. Both your father and grandfather were cradled in it. My mother sat in it fifty years, my wife thirty-five; do you think I would fill its place with the most gorgeous piece of furniture the world can boast? No!"

My own eyes were raining tears, and I threw myself upon his neck and begged him to desist. From that hour I date a change in my views, which have clung to me with an affectionate regard, in spite of the eloquent pleadings of later-day acquaintances, who arrange them to their liking, under the sobriquet of "old-fashioned notions."

At length it came our turn to visit the doctor's. How shall I describe my feelings when driving up the broad avenue that led to his house.

A double sense of shame and mortification seized me, now I was about to meet him under his own roof. A troop of children, from the age of five to twenty, came rushing out to meet us, drowning each others voices in their eagerness to communicate their joy at seeing us. First and foremost came our mutual friend. I had always associated blue eyes and golden hair with my ideas of angels, until I knew Jack Sibley. His were as Byron has painted Haidee's, "black as death—their lashes of the same hue," and their darkness seemed to cast a shadow over my whole soul; but when he gave me his hand, and assisted me to alight, and presented me to his brothers and sisters, I felt the shadow lessening, and a sunbeam dawning upon me. There was his stately sister Carrie, who ever accompanied him to see us, tasting the richness of Millie's lips, while Effie and Jenny, who were about my own age, nearly smothered me. A little mad-cap whom they dubbed "Jolly," insisted on my passing an opinion on his new kite, while old "Towser" seemed as glad as the rest, and frolicked about, determined not to be outdone in gallantry, and made himself conspicuous in various ways, in spite of the severe remonstrances of the whole party.

We passed under the arched doorway, and ascended a broad flight of stairs, richly carpeted, and found ourselves domesticated in a spacious parlor, embellished with every appropriate luxury which wealth and a refined taste could designate. I was ill at ease until the father appeared and I received the assurance that my rudeness and ill humor had been entirely overlooked or forgotten. The day passed delightfully, and we returned at nightfall, well pleased with our new acquaintance.

From that time Jack and his sisters became regular members of our household. We were constantly together, riding or strolling along the margin of the little rivulet, climbing its rugged banks, or spending whole hours in the forest. Jack, especially, came without reserve, and often spent the entire day. I had never been intimate with the other sex, and it was but natural that I should become interested in one like him. He possessed no ordinary share of beauty; was free and open in his bearing, delicate in his feelings, and exhibited a thoroughly developed intellect. His gentle dignity of manner rebuked my cherished desire for admiration, and love of display; and in his presence I forgot all my accomplishments, and the thousand little bits of sentiment I intended to say.

By some strange misnomer I now began to discover in myself defects rather than charms; and as the time wore on, I could no longer vail, even to myself, the true state of my heart. It was become too palpable to be misunderstood, and seemed spread open to the household to read like a book. I could read by the light of a new sunbeam that dawned upon it, and through its indelible pages were my faults first made known to me.

We parted, and no word had passed between us in regard to our mutual feelings; but I am not wrong when I say each understood the other. Five years after, I became his wife; and the troop of rosy madcaps around me, almost distract me sometimes; but papa insists that exercise and shouting is good for the dear little creatures, and I am as proud of him and them, and love them so dearly that I let them have their own way.

The dreaded day soon arrived when we were to leave the delightful scenes which had contributed so much to our enjoyment, and return to our studies. Poor Millie clung in sorrow to aunt Edith, who had become so much attached to her that I almost feared a rival in her affections.

The evening previous to our departure, we set out to pay a last visit to the waterfall; but, under some simple pretence, I managed to make my escape, and allowed uncle Harry and Millie to proceed without me. At night, as I was about to enter the parlor, I saw, through the glass door, my grandfather place his hand upon Millie's brow, while the other held Harry's firmly in his grasp, and heard him utter, through his quivering lips, "God bless you my children." I involuntarily turned back, but I knew the story had been told, and they were betrothed.

I will not tire your patience, dear reader, with intervening incidents, but bring my story to a close by briefly saying, in one little year, he sought her in her far-off southern home, where she had been reared a stranger in her father's halls, where, with no bridal *trousseau*, he received her from the hands of her uncle, and bore her to the old homestead, where, like a flower that has closed upon its own sweetness, she revived with unwonted beauty under the genial breath of love and kindness. Life is one long holiday now; no lowering clouds threaten in their sky; no chill winds sweep around their home hearth; the old house is lit up with smiles, and childhood's glad laugh fills the apartments with happiness. The sweet angel of peace folds her white wing about them; faith, hope, and charity are abiding guests, for their throne and love's sacred altar are inseparable.

The moral of my story is this: never judge hastily from outward appearances, for the germ of goodness and beauty oft lies concealed in a rough exterior; and to treat all with respect, and age, even in rags, with a reverence as holy as though it moved about in golden slippers.

THE FOUNDATION OF VIRTUE.—As the foundation of virtue, children ought very early to have imprinted on their minds a true notion of God, as of the independent Supreme Being, author and maker of all things, from whom we receive all our good; who loves us and gives us all things. And consequent to this, instill into them a love and reverence of the Supreme Being. This is enough to begin with, without going to explain this matter any further, for fear, lest by talking too early of spirits, and being unreasonably forward to make them understand the incomprehensible nature of that Infinite Being, their heads be either filled with false ideas, or perplexed with unintelligible notions of Him.

[For the California Farmer.]

Letter to H. E. S.

My dear friend in the cause of truth and progress, I have just perused your truly kind and excellent letter to me, with emotions which are better felt than told, and it convinces me more than ever that woman needs but a good and legitimate channel for her generous thoughts and sentiments, to call into life the dormant faculties of her mind, which have been hushed into this death-like torpor by the siren of flattery and too much vain indulgence; and such have revenged themselves upon their enslavers by adhering to them as mere parasites, sapping the very fountains of that life and happiness, to which they should have added new vigor and beauty.

Man, as the personification of the wisdom principle, should direct and train the vine-like affections of woman, who seeks to be elevated by her love, and rejoices to be assisted to rise above the mere sordid things and duties of earth, by being permitted to lean upon his superior strength of mind and arm. But how often do we see the curling tendrils of a young heart's pure affections, twining around decayed and rotten-hearted objects which yield them no support, and ere long they are dragged down into the dust, still clinging to the fallen one, without the power to untwine their fettered hearts, and there to wither and die without hope or pity! Yes, so long as man shall by flattery administer fuel to the fires of woman's vanity, instead of giving her the healthful admonitions of prudence and wisdom, just so long will woman (many of them) seek to enhance the beauty of those charms only which are most admired by him.

Woman naturally accords to man the possession of most wisdom and knowledge, and true love seeks these as its positive principle, without which, it can never be made perfect. That we have not been rightly educated, I have felt most sensibly, when traveling on steamboat or in stages, where men will converse together in the most free and easy manner, and sometimes upon very interesting and philosophical subjects; my heart has burned to say a word now and then, and when I have ventured to disregard the so-called rules of propriety and make an observation, I would encounter a general stare; the ladies present look at me with glances which seem to say "we know you now," and it would be in vain to try to converse with them after having committed such a breach of etiquette as to talk with men upon subjects so foreign from the latest fashions, or the last new novel. And if any of the gentlemen reply to our remarks, he does so in changed and blandish tones, as if speaking to a child, as though doubting that we understood what we were saying, and his answer conveys the idea that it is not presumed for one who wears a bonnet to know the same as one who wears a hat.

Now this is all wrong; if men talk all the sense to themselves, and all nonsense to women, and we taught to look up to them for wisdom, we had better harbor what little common sense we may have inherited by nature and try and make the most of it, by cultivating it among ourselves and turn a deaf ear to all who may seek only to please with soft words of flattery, until they shall learn to treat us more as reasonable beings; and this I have no doubt they would do, if they but once found that women smiled as sweetly, and talked as approvingly when they spoke of the beauties and accomplishments of the mind, as when speaking in praise of their personal charms.

I also believe with you, that woman is or may be made capable of occupying a far wider sphere of thought and action than has ever yet been allotted to her, and she has only now to step forth and assist in adorning the temple of liberty, which it has cost so much blood and treasure to rear, where we are guaranteed not only liberty of action, but also *freedom of thought*, and where there is much for us to do in the cause of human progress, before the last ornament, the banner of love, shall be placed upon its capital.

But I must close, as I fear I have already written more than the Colonel will have space for, and I think he will have to enlarge his paper if he prints all his lady contributors may wish to write.

I would send you my address, but am not willing that you should spend your time in writing such excellent thoughts for me alone, but rather that your kind words, like the dew of heaven, may be distilled upon all the thirsty souls of earth's weary pilgrims.

Yours, in the bonds of universal love.

EDITH MONTRESSOR.

P. S.—Please let us hear from you again soon. E. M.

HOTELS, &c.

WIMMER'S RESTAURANT.

WIMMER invites his friends and patrons back to his old home,
148 Montgomery street.
"There is no place like Home."
The Restaurant so long known as
Wimmer's Restaurant
will open on SUNDAY, the 21st March, where all the luxuries of the season can always be found, and they will be served up in a style unsurpassed by any establishment of the kind on the Pacific coast.
WIMMER, 148 Montgomery street
10 (near the Bulletin office), San Francisco.

ANTELOPE RESTAURANT, Sacramento.

NOTICE.—In consequence of the scarcity of money these hard times, the Proprietors of the ANTELOPE RESTAURANT have concluded to reduce the prices of their well-known establishment, so as to place the necessaries and luxuries within the reach of all.
The undersigned believe that all who visit the ANTELOPE will find it what it should be, a Genteel Eating House, and of the first order.
In addition to the Restaurant department, we have suites of Rooms, and single Rooms for Gentlemen Boarders or Lodgers, equal to any hotel in the city.
We shall at all times be happy to see our Friends.

J.L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague,

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE, *Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.*

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

MACHINES AND IMPLEMENTS.

TREADWELL & CO.,

IMPORTERS,

N. E. corner California and Battery streets,

SAN FRANCISCO,

have now landing, and will receive by every packet from New York and Boston, the most extensive assortment of

FARMING MACHINERY

and Implements,

ever brought to this market, embracing all the

Latest Styles and Improvements,

which will be sold at lowest rates.....consisting in part of:

REAPERS:

MANNY'S COMBINED REAPER AND MOWER, WITH WOOD'S IMPROVEMENT..These justly celebrated Machines have become too well known in California to require more than a simple announcement where they can be had. We are sole agents for the Pacific coast, and none genuine elsewhere.

McCORMICK'S REAPER....This universally approved Reaper we keep constantly on hand, and are Agents of the Maker.

KETCHUM'S COMBINED REAPER AND MOWER....This Machine is now very popular—having been greatly improved the last two years.

BURRALL'S IMPROVED GRAIN REAPER. This Reaper cuts six feet, and is one of the strongest and most durable Machines in use.

SEYMOUR AND MORGAN'S REAPER; without the Raker attachment and all late improvements.

HUSSEY'S REAPER....Baltimore make.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.
BOGARDUS' 2, 4, and 6 horse do do.
FIELDS' 2, 4, and 6 do do do.
EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times, Extra points and parts can always be had.

This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.
Do. CUTTERS—Several sizes and kinds; hand and power.
HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.
GRANT'S GRAIN CRADLES—In cases of one dozen each.
Do. FAN MILLS. Also, the Boston Mill.
CORN SHELLERS—Hand and power.
Scythes and Snaths—best steel Scythes and Lamson's Snaths.
Hay and Barley Forks—2, 3, and 4 tine; of best makers.
Carpenter's Patent Wire spring-Tooth Horse Rakes, 10 to 15 feet long, with wheels, and seat for driver.
Ox Yokes and Bows—all sizes.
Churns—Thermometer, Dash, and Cylinder; also, Dog Powers for do.
Garden Harrows. Cauldrons and Furnaces. Cultivators.
Horse Hoes. Seed Sowers. Harrows.

Field and Garden Seeds

Of every description, via the Isthmus—this year's growth (1857).

Steam-Engines, 4 to 15 Horse Power.

Suitable for Ranches or Mining purposes.

Portable Flour Mills and Mill Stones—Noyes' make. All sizes, 16 inch to 4 feet.

Belting, Bolting Cloth and Packing—All kinds and sizes of the above.

HARDWARE—The best stock in the State.

MINING GOODS—All kinds in use.

COOPERS' AND TANNERS' TOOLS—Full assortment.

Baling Wire—Annealed.

Hay Rope—Best Manila.

Grindstones—Best dressed Nova Scotia; from 6 inches to 4 feet diameter, packed in casks in sawdust.

Wire Fencing—A neat article for inclosing Gardens, Heneries, &c. Also, for Ornamental Garden work, Grape and Rose Trellises.

Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c. &c. 9v-4

Letter from New York.

Steamer-day—Steamship Lines—Kansas—Buchanan and Douglas—Army Bill—Dueling at Washington—Religious Movement—From Europe, India, China, and Japan.

NEW YORK, March 5, 1858.

EDITORS FARMER: The steamer day has arrived, and Californians know full well what "*steamer day*" means: a day of hurry and excitement, when money must be collected, or borrowed, drafts bought for the East, letters written, papers printed, hurried from the press-room, folded, put in wrappers and mailed, *friends* to accompany to the steamer, and to bid adieu to those "going East," and then return slowly and often sadly, thinking of their far-off childhood's home, scenes, and friends, often mingling a tear with the memories of the past. These memories, though painful, are precious. Who would blot them from the records of the heart?

As the news and gossip of the past two weeks, sent from each side of the continent to the other, to keep up the proper equilibrium, I will proceed to untie my *bundle* and spread the items before you. First and foremost, there is to be a steamer leave here every week for California. Some say there will be three lines in operation soon. Time will show. The Northern Light will leave here on the 10th, to connect with the Orizaba on your side. [From recent developments, our correspondent will probably be disappointed in his expectations.] They are putting the fare down to a low figure. Never mind. Wait till Capt Randall's new line is placed upon the route. You will then see steamers worthy the name.

Congress has not yet passed any bill of importance to the country. There is scarcely anything heard but Kansas. *Kansas*, KANSAS! Well, what of it? *It is, it must be*, and will be a Free State, though the Democratic party may be shivered into as many fragments as there are individual members composing it. That party is even now much like the boy's Latin lesson "*quartered into four* halves." Poor Mr. Buchanan is in a bad way. If he joins the South, the North will give him a cold shower bath; if he sides with the North, the South will give him a hot *vapor* bath, with plenty of sulphur and saltpetre thrown in. If he turns to the East, his old friends confront him; if he turns from their sad faces to the West, the *little giant* appears almost ready to tread upon his corns. He seems more willing to encounter the sad gaze of his friends, and the vapor and shower baths stirred together, than to see the *giant* knocking away his *underpinning*.

The Army bill has been rejected in the Senate. General Scott will not go the Pacific at present. Brigham is determined "*phite*." Our Utah army, at last accounts, was in good health and comfortable quarters at Camp Scott.

The dueling fever has been raging at Washington. Two army officers had "a crack" at each other. One wounded *the hat* of the other, by shooting a hole through it. I don't know whether *any lives were lost* or not. Two others went out, and practiced shooting for several days. It is said, one of them shot seven times at a ten acre lot, and did not hit once within five hundred yards of it, and the other could not *get his gun off at all, no how!* So they adjourned to the nearest tavern, one acknowledging that his harsh words were spoken in a "*Pickwickian*" sense, and the other that the blow he dealt was given "pickwickianly." Sensible confession.

The Pacific Hotel was recently burned in St. Louis, in which some twenty or more persons perished.

Judge Kane, the father of the late Dr. E. K. Kane, the Arctic Explorer is dead; also, Bishop Waugh of the Methodist Church.

The number of American vessels wrecked, and missing, for the last month, so far as known, is over forty.

It is said that the slave trade has been reopened in Louisiana, and that a large slave depot now exists near New Orleans.

The money market, on this side, is easy, business generally dull, weather very cold, ice plenty, provisions high, news scarce, and miscellaneous things generally comfortable.

There is a widespread religious movement and interest now pervading almost every part of the land. Many of our churches are daily opened for prayer meetings, for one hour, from 12 to 1 o'clock, usually; some from 8 to 9 o'clock, A. M., others from 4 to 5 P. M. Some of the largest churches in the city, particularly those in Fulton and John streets are daily so much crowded by our business men, between 12 and 1 o'clock, that many are obliged to go away, not being able to get even near the doors.

From Europe we have late dates. Parliament was in session. Money market easier.

In France, investigations into the attempted assassination of Napoleon were going on. The stringent measures adopted by the Emperor, to silence the press, are deemed extremely hazardous.

Prince Frederick of Prussia, and his royal English bride, were received with great enthusiasm at Berlin, their future home.

It has been ascertained that about thirty thousand lives were lost by the recent earthquake in Naples, and the dwellings of two hundred thousand persons destroyed, including some fifty or sixty towns and villages.

Later advices from India indicate that, though the rebels are conquered in some parts, yet they are not subdued, and seem fully determined to carry on the war until they, or the English, perish.

At Canton there has been some fighting. It is easy to predict the result there.

The most interesting and hopeful news from the East is that the Prince Tzi-Kiezeu, nephew of the Emperor of Japan, was to have sailed from Simoda in December last, on a visit to France, England, Russia, Holland, and the United States. He will be attended by a numerous suite, and two eminent engineers, natives of the country, to examine the Railroads, Steamships, and all the great improvements that have been made for a thousand years, while they have been shut out from the great lights that now shine upon other lands. This announcement is surely suggestive of hopeful thoughts. What will be the *kind and extent* of commercial relations that will necessarily spring up between our country and Japan? You are so near their doors that you can be more immediately benefited. What are Californians willing to do to secure the trade of Japan, when that vast empire is thrown open to the commerce of the world? You will hold the key in your own hands, and can gather the first outpourings of her vast and novel treasures flowing in upon you. Think of this, and be prepared for action. Have your craft ready to push off when the tide is up.

B.

Since writing the above, the morning papers have announced the death of Commodore Perry, the commander of the Japan Exploring Expedition. He died yesterday at his residence in this city.

THE QUEEN CITY.—This celebrated steamer has been, for a brief term, upon the Sacramento route. It was our pleasure recently to make two trips up river upon the Queen City. As we promenaded her spacious saloon, we recalled her past success; we remembered the brilliant festival scene, when this splendid steamer made her first trip up the Sacramento, with more than *one thousand passengers*. That was a glorious festival, the streaming banners, the strains of music and of song, and the merry dance; the joyous, gay, and happy crowd; would that these days could come again. We confess we are sorry that such boats as the Queen City and the Eclipse are not both upon the waters of the Sacramento. The time will come when we shall need them all. Our trips were very pleasant. The gentlemanly courtesy of Captain Barclay and Purser Welch, always makes a trip a happy one. Then too there are those table arrangements. These high pressure boats have a peculiar way of getting up a hot supper, that is *recherche*; the chief steward is so attentive and polite. How much better a supper tastes when so kindly waited upon. We regret the change that requires the withdrawal of this elegant steamer; but we learn she only lays up a brief time to repair, and her place will be taken by the Eclipse, a truly magnificent steamer. Now, people may say what they please about monopoly and combination, but we should like to see a company try to do better if they can than the California Steam Navigation Company; they may not be perfect, but where is there a company that will do better?

WEBB, SOUTHDOWN SHEEP.

HAVING RAISED MY FLOCK OF PURE WEBB SHEEP (by importations, and purchase of Col. L. G. MORRIS), to as large a number, as my land will accommodate, I now offer a few EWES, and several BUCKS, for sale, at from $40, to $100 each.

I believe mine to be the only flock of PURE Webb Sheep in America, and am confident, that no other person can sell as fine quality, at as reasonable prices.

Also for sale BERKSHIRE and ESSEX PIGS, of the best blood, from COL. MORRIS' importations.

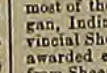
For further information—address,

J. C. TAYLOR, HOLMDEL, Monmouth Co., N. J.

Or WARREN & Co., Editors Cal. Farmer, San Francisco.

N. B.—COL. L. G. MORRIS, of Mt. Fordham, N. Y., has very kindly given me the privilege of referring parties to him, as he is well acquainted with my flock at the present time. [24-3mis

French Merino Sheep.



HAVING been engaged in importing and breeding FRENCH MERINO SHEEP for several years past, I can now furnish RAMS and EWES, either imported, or raised by myself from imported stock, equal to any that can be found in this country or Europe.

I was awarded all the prizes on French Merino Sheep at our last State Fair; and all the premiums awarded to this class of Sheep at our last National Fair, and the most of those at the State Fairs of CALIFORNIA, Michigan, Indiana, Missouri, Wisconsin, and also at the Provincial Show of Upper Canada, for the present year, were awarded either to Sheep raised by myself, or to stock from Sheep raised by me, and sold to others.

CIRCULARS, giving a full description of my flock, sent by mail to all applicants. Information can also be obtained of the Editors of the CALIFORNIA FARMER.

Prices as low as the *same quality* can be purchased of any other person, and Sheep delivered in New York, free of charge. JOHN D. PATTERSON,

WESTFIELD, Chautauque County, NEW YORK.

OIL!

FOR QUARTZ MILLS.

STANFORD BROTHERS,

PACIFIC OIL AND CAMPHENE WORKS,

INVITE attention to the following Certificates from GRASS VALLEY:

NEW-ENGLAND QUARTZ LEAD, Dec. 23, 1857.

W. LOUTZENHEISER, Agent of Stanford Brothers, Pacific Oil and Camphene Works:

Dear Sir: I have now given those Oils from Stanford Brothers, which I purchased from you, a fair trial, and find them the VERY BEST I have ever used.

Z. WHEELER, Superintendent.

ALISON RANCH, Dec. 25, 1857.

This is to certify, that we have been using the Oils from Stanford Brothers Pacific Oil and Camphene works, for a long time, and find them of a superior quality.

JOHN ANDERSON, First Engineer.

ALTA HILL, Jan. 12, 1858.

I hereby certify, that we are now using on our Machinery, Oils manufactured by Stanford Brothers' Pacific Oil and Camphene works, purchased at their Agency in Grass Valley, and have no hesitation in saying I believe them to be superior to any other manufactured in the State.

L. CARLSSEN, Sup't Alta Mining Co. No. 2.

The SPERM OIL furnished to these Mills is worthy the particular attention of ALL who use OIL for lubricating purposes.

Proprietors of Sawmills, Gristmills, Steamboats, and other Machinery, throughout the State, supplied in quantities to suit, and quality guaranteed in all cases.

SEED, PLANTS, &c.

SEED WAREHOUSE.

No. 110 CALIFORNIA STREET,

(Established in 1850.)

THE undersigned, successor to the late firm of J. M. MOORE & Co., has constantly on hand, and receives by every Express and clipper ship from the Atlantic States and Europe, additions to his already large assortment of choice

Field and Garden seeds, Flower do., Fruits do., Tree seeds, Canary, Hemp, Millet, Rape and Maw seeds, Herb seeds, French Sugar-Beet seed, Chinese Sugar-Cane seed,

DUTCH BULBOUS ROOTS, and other FLOWERING ROOTS, BULB GLASSES, GARDEN TOOLS, &c. &c.,

which he offers to the Farmers and to the trade throughout the State on liberal terms. The old and wide-spread reputation of this House, of furnishing the best Seeds that can be procured in the Eastern States and Europe, is a sure guarantee that every article sold will prove true to the label, and will grow, if properly planted. Most of the Garden Seeds are raised and put up by the Shakers, at New Lebanon, New York.

N. B—Parties wishing small papers of Seeds for samples, can have the same forwarded by mail (postage paid), by forwarding the cash, at the rate of 25 cents per paper; also, packages of Flower Seeds forwarded through the mail at the same rates.

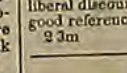
CATALOGUES furnished, on application, with prices attached.

For sale, wholesale and retail, by

S. W. MOORE, Importer and Dealer in Seeds, &c., No. 110 California st., San Francisco.

v8-2-3m

The Concord Grape.



THE ORIGINATOR OF THIS NEW GRAPE offers for sale a fine stock, raised from the parent Vine. It has fully sustained its reputation as

The Best Grape for Out-door Culture

having survived the last two severe winters unharmed, where the Isabella, Catawba, and other vines were killed to the ground.

For Size, Beauty, Quality and Bearing,

it is unsurpassed. It is perfectly hardy, and has never been affected by rot or mildew, while it ripens from three to four weeks earlier than the Isabella, and two weeks earlier than the Diana, in the garden of the proprietor.

Fine, strong plants, at $1 50 each; $12 per dozen. Two years old, at $2 each. Three years old, extra, at $3 each. A liberal discount to clubs and the trade. Orders, with cash or good reference, promptly attended to. Address

2 3m E. W. BULL, Concord, Mass.

Ornamental Shrubbery.

Rhymes for the Times.

NUMBER 1.

THE GOLDEN AGE.

The poets of Greece were wonderful men,
If you read what they wrote you would never deny it;
If ye think ye could beat them, ye blockheads, why then,
Set to scribbling your meaningless nonsense, and try it.

The poets of Greece wrote wonderful things
Of wonderful lands that were chokeful of glory,
Of women who fought, and of horses with wings,
And made up among them a wonderful story.

The poets of Greece went further than this—
Ere the people to princes and priests were beholden,
They said, was an age so abundant in bliss,
That they christened correctly that period, "golden."

They said, ever since, that the Earth did not grow
But a fraction of what it produced, and that, truly,
The prices got high, and the wages got low,
And, half-fed and hungry, that folks got unruly.

The poets of Greece were wonderful men,
If you read what they wrote you would never deny it;
If ye think ye could beat them, ye blockheads, why then,
Set to scribbling your meaningless nonsense, and try it.

They were priests of old Nature, and kings of their craft,
And prophets, they say, for myself I believe it;
And I mean to establish the doctrine, and waft
To the world its teachings, that all may receive it.

The ladies, God bless them, I speak not of them;
If they fight with their husbands let nobody know it;
If their hoops and their petticoats please them—ahem!
What's a hoop—to a glimpse of the ankle below it?

Our hunters and racers are out of my line;
And fighting for glory I care not a straw for;
But our gold-bearing hills, and our valleys so fine,
And our soil so productive, I'm here to hurrah for.

For this was the country, and ours is the age,
Which the poets announced in the form of a fiction;
Which they said was gone by; but how could they engage
To explain to their hearers their honest conviction?

The Greeks, as we know, were a fire-eating squad,
And were puffed up so much in their own little nation,
That had they not fancied the poets were mad,
They doubtless had worked them a deal of vexation,

Had they ventured to tell them as plainly the truth,
As I at the present attempt to explain it;
So much did they think of the world in its youth,
There was no doubt at all that they all would disdain it.

Long, long after that, and the world had revived
From a period of priestcraft and power knit together;
Though yet there were many that more than connived
At their damnable doctrines, yet fated to weather

The outbursts of Freedom from falsehood and gulles;
Until men, for their rights, with their God to protect them,
Took his crown from the tyrant, and laughed at the wiles
Of the priests, with the whole Vatican to direct them.

But the great grew so proud, and the world grew so wise—
They had too much conceit it would seem, and to cure it—
They concluded to fight, and the world shut its eyes
As to whether poor laboring men could endure it.

They had motives who made the dispeace, I believe,
The poor have got poorer, the rich have got richer;
The rich man in Europe is *rich*, but I grieve
To inform you the poor is a hedger or ditcher,

A serf of the soil, or a slave at the loom,
A-toiling from morning to night for existence,
And if hunger and ignorance is not his doom,
He only escapes them by closest persistence.

But this is the country, and this is the age,
Which the poets announced in the form of a fiction;
Which they said had gone by, for how could they engage,
To explain to their hearers their honest conviction?

There is gold in our mountains, and gold in our streams,
There is grass on our hillsides, and grain in our valleys,
And we here realize all they saw in their dreams,
For there is not a point in both cases but tallies.

AGRICOLA.

MILLERTON, March 29, 1858.

Jack Frost Among the Peach Orchards of Shasta.

SHASTA, April 3, 1858.

EDITORS FARMER: Complying with your request, I will forward you a few lines relative to the unusually cold weather of last month; also the time of the flowering of fruit trees in this place. The last half of March has presented a pretty good specimen of winter. On the 17th there was ice to the thickness of a sixteenth of an inch. There was ice also on the 18th, but it was a trifle thinner than on the preceding morning. On the 27th, snow fell to the depth of two inches. The 30th has rendered itself memorable to our citizens by a tremendous heavy rain, doing some damage, and raising the water in the ravines higher than it has been before, since the spring of 1854. We were visited by a hail storm, on the 29th, but it was not severe enough to do any serious damage.

Fruit has entirely escaped all injury. I never saw the cultivators of fruit view their trees with so much satisfaction as at present. Every man now looks upon his young growing fruit as a mighty army of little heroes. And why should he not? It has met an attack from the allied forces of frost, snow, hail, and floods, and has come out of the unequal contest victorious.

Twelve miles northwest from Shasta are the well known orchards at the Tower House. Mr. Tower informs me that his fruit has not been seriously injured by the cold weather, although on the morning of the 17th there was ice half an inch thick. On examining the peach blossoms, early in the morning, they were found to be solid with ice, a slight shower, the evening before, having filled them with water. It seems almost incredible that blossoms so badly frozen should maintain their vitality. But the fruit was doubtless saved by the sun being clouded until near 11 o'clock, while the rising vapor from the surrounding waters of Clear Creek, and Crystal Creek, gradually dissolved the ice. The snow storm of the 27th was more injurious to the peaches in that locality than the cold weather had been; yet, after all, there is enough left upon the trees for a fair crop. In both cases the line of demarcation between total annihilation and partial injury seems to have been nicely drawn. A little greater severity, or a little less favorable mode in thawing, would have destroyed the entire crop; but a slight favorable change on the other hand, and it would not have been injured at all. Now, it is in these nicely balanced cases that observations are the most valuable. It appears, upon examination, that the injury to the peach was confined to the varieties propagated by budding or grafting, while native seedlings, or, in other words, those propagated only from the pit, escaped entirely uninjured. This goes to corroborate the generally admitted fact that native trees are hardier and more robust in every respect than the budded, or grafted varieties.

I was much pleased to learn from the last issue of your paper that you had received a statement from some friend at Benicia, giving the date of the flowering of fruit trees in that place. I hope you will soon be able to publish information upon this interesting and important subject from all parts of the State. I like to have the records to file away for reference. I notice in the statement published, that the peach blossomed at Benicia fourteen days earlier than the apricot. How is this? Have these two fruits been jumping each other's claims?

It will probably be found, when thorough observations have been made, that the flowering of fruit trees occurs earlier in Shasta, in proportion to its latitude, than any other place in the United States. The peach blossoms here, within from three to ten days, as early as in Savannah, Georgia. The latitude of Shasta is 40° 43, being the same as that of the city of New York. It is a remarkable fact, that in 1857, while the cherry did not blossom in New York, and vicinity, until the 7th of May, we had the May-Duke cherry ripened to full perfection here, in Shasta, on the 2d of the same month—five days earlier than the same fruit blossomed on the same line of latitude on the Atlantic coast.

Below is a statement of the time of the flowering of fruit trees in Shasta, for 1858:

Soft-shell Sweet Almond, Feb. 6; Apricot, 16th; Peach, 24th; Plum, 28th; Pear, March 6; Cherry, 7th; Apple, 15th.

Respectfully yours, B. SHURTLEFF.

We return our sincere thanks to our friend for his kindness in furnishing the above full particulars upon the late severe weather in Shasta. These records are valuable, and will be found of great service to all. Will other friends please send us schedules of similar import; our friends in San José, Sacramento, Marysville, and the several ranches, and other places.

Time of Blossoming.

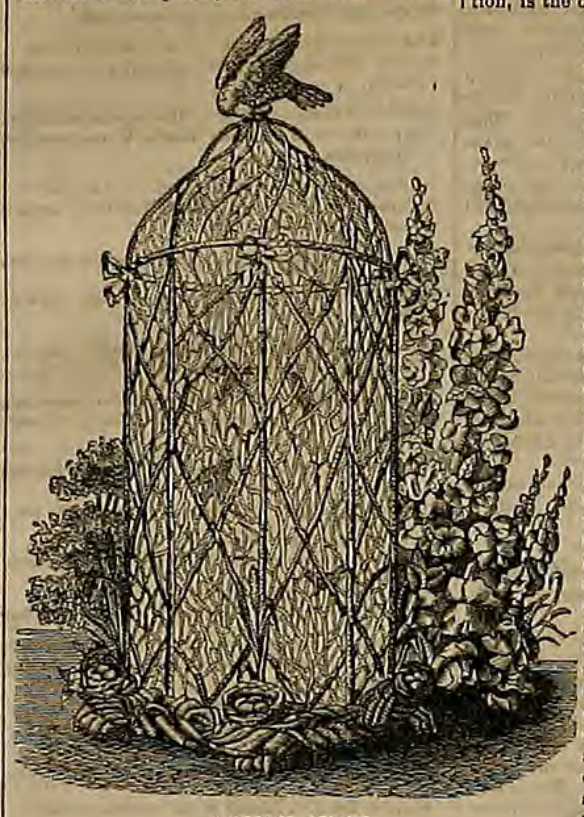
In the locality of San Francisco, fruit appears to be later in blossoming, than in most other parts of California. To be sure, this is not much of a fruit-raising section, but quite a number of fruit trees are cultivated in gardens and other places where they can be protected from the high winds of summer. This year the peach apparently started here nearly or quite as early as in the Sacramento Valley; though generally the latter was a few days ahead. With other fruits, this seems to be more behind other localities though a variation of a week or more may be made by not stating whether the time is marked at the first opening of isolated blossoms, or when in full flower. A couple of dwarf pear trees (Duchesse d'Angouleme) were in full blossom from say the 15th to 20th March, one a few days later than the other. A cherry tree was in full blossom, about the 4th or 5th inst., and is not yet out. Apple trees appear to be now in full blossom, commencing to open about the 5th. These observations were in a locality apparently as favorable as any for early growth, though it may vary from other places. Apparently there was no frost to injure here. On some trees the peaches are at this date (9th) say half an inch in diameter. The cottonwood trees on the Plaza are starting out their miniature leaves, but they come forward slowly, and are inferior as ornamental trees, in the opinion of

AMATEUR.

We have letters from San José, from L. Prevost's gardens; frost has been very severe, and they believe they have lost their entire crop in the Santa Clara Valley; yet we believe they will have a fair crop. Smith's peach trees at Sacramento are uninjured.

The Aviary.

This design is after the fashion used at Baltimore in several places, and at the south. With



A SUMMER AVIARY.

us it would be a perpetual aviary, as our seasons are such as would protect birds at all times from the severity of the weather, and it would be a beautiful ornament to our gardens. The Horticulturist in describing them says:

In visiting Baltimore, we more than once came upon beautiful aviaries—a species of ornament not generally introduced in America, and which it is perhaps as well to avoid, and to encourage the "free tenants of the air" around our dwellings. Prisoners of this kind are, however, sought by many; as it has been said, "people *do* and *will* keep them, and it is well to show how birds already confined, may be comparatively reconciled to their imprisonment." This we leave to books which specially treat on the subject, our only object at this time being to give a portrait of a summer aviary, for the embellishment of a lawn. The interlacing branches form the framework, to which is attached, within a fine wire netting, the latter, painted a gay, ochreous yellow, or pale brown. The nests and reeds around the base are happily disposed, and appropriate in character, while the falcon poised above, suggests the security of the sheltered inmates of the cage.

The design might be worked out in metal or wood; if cast in iron, it would require to be appropriately painted or bronzed; if in wood, the general framework might be formed of well selected tree toppings, with carved nests at the base, on a firm timber or iron foundation. In any case, it would be well to attach near the summit either a wire with rings, or any other simple contrivance for the reception of a light blind or screen, to shade off offensive sunlight, or give shelter during spring or autumnal frosts.

Water! Water!! Water!!!

IN our last issue we called the attention of our readers to the famous Pumps, advertised by J. S. Paxson, Esq., on California street, called the *Continuous Acting Pump*, for irrigation. We called on Mr. Paxson and was shown the model and its working, and as we said, it is truly worthy the notice of the entire community. As our time and opportunity would not permit us to prepare such a description as we felt this invention demanded, we invited a friend whose theoretical knowledge and practical acquaintance qualified him to give us a correct description of the same, to examine each Pump, and furnish us with the details. We now present our readers with his description, and we feel sure its perusal will awaken a due share of attention to the subject. We would ask the especial attention of our readers to the closing remarks of our correspondent; we fully indorse such sentiments:

Barker's Patent Double-Acting Force and Lift Pumps.

EDITORS FARMER: Whenever any great invention or improvement in the Mechanic Arts is sent forth to the world, it is alike the privilege and the duty of every lover of Art to do what he can to make the invention or the improvement more widely known. This is particularly the case when, as in the present instance, the improvement is designed to meet a great public want. On my own suggestion, therefore, and agreeably to your request, and without any solicitation from interested parties, but merely yielding to the behests of my own honest impulses, I beg sufficient space, in your excellent journal, to give a somewhat minute description of "Barker's Patent Double Acting Force and Lift Pump," one pattern of which I see is advertised in the columns of your paper. And I do this the more readily, and ask the favor more willingly, because there are thousands of persons on the Pacific Coast who desire to know that such a Pump is in existence, where it can be had, and obtain the most reliable and satisfactory information concerning it. Amid a multiplicity of patterns, styles and qualities, and without a careful personal inspection or experience of their working capacity, it is almost impossible for a stranger to make a judicious selection. To aid all who desire such information, is the object of the present attempt.

It is fair to presume that a Pump that has received a "complimentary medal from the World's Fair, London," and "First premiums at several State Fairs where it has been exhibited in competition with others," is, and must be, a valuable invention, and worthy of public attention and respect.

It is also fair to presume that when a Pump has received an unqualified commendation of railroad engineers, of superintendents of public water-works, of canals, machine shops, mills, distilleries and mining works, of mechanics' Institutes, householders, farmers, gardeners, and nurserymen, all of whom testify to its wonderful "simplicity, efficiency, durability, power and cheapness," that they mean precisely what they say. If we cannot place confidence in such unsolicited testimony, given after several months practical observation of its working capacity, then of what use is human testimony in any case? It is not rational to suppose that men will willingly bear false testimony, unless some reasonable motive can be assigned for doing so. It is quite possible for men to give testimony in a plausible and imposing manner, without possessing the requisite qualifications, or from selfish and sordid considerations. Such testimony may be extremely mischievous, and probably "leads, to bewilder; and dazzles, to blind." The value of all testimony depends on the integrity, the competency and the disinterestedness of the testifyer. These qualities being present we can ask no more. Whether the large number of eminent engineers and gentlemen of different pursuits have testified truly or otherwise concerning this Pump, can easily be determined, without cost, by a personal inspection of its workings in very many places in this city.

But to the description, which I propose to give in the following order:

1. *Cistern Force Pump;* 3 inch bore, 4½ inch stroke.—This Pump is designed for Cisterns, either in or outside the house. It is a Forcing Pump, and may be used, if necessary, to throw water by unscrewing the spout at the coupling and attaching the hose, or by attaching the hose to the end of the spout with a hose clevis. This Pump has also an elevating connection, for the purpose of raising water into upper bathing rooms or chambers. Capacity: It will raise one gallon in eight strokes. A stroke is an ascent or descent of the piston. It throws through a half-inch nozzle fifty feet.

2. *Shallow Well Pump;* 3 inch bore, 6 inch stroke.—The same in form as the Cistern Pump, only larger and heavier, and designed for the use of shallow wells, in warm climates, or for a well inside the house, where it is protected from the cold. It is made with double spout arrangement. May be operated with a single or double brake or lever. When applied as a double lever, two may operate the pump with great power. Capacity: It will raise one gallon every seven strokes, or three and a half revolutions, and throws through a half-inch nozzle seventy-five or eighty feet horizontally.

3. *Single Lever Deep Well Pump;* 3 inch bore, 6 inch stroke.—The standard or upper part of this Pump is placed upon the platform at the top of the well, the cylinder and air chamber on the lower part, are screwed to a plank and placed down the well within 15 or 20 feet of the water. The two parts are connected by lead pipe, and the water is forced through the lead pipe into the upper part and discharged at the spout. This pipe and the rod attaching the lever to the lower part can be lengthened to meet the depth of any well. Capacity: it will raise one gallon every seven strokes, and throw through a half-inch nozzle seventy-five or eighty feet.

4. *Deep Well Pump, double lever and rods;* 3 inch bore, 6 inch stroke.—This is another arrangement for deep wells, with two forms of levers and double rods. The difference between this Pump and the last one described, consists in the connection of the air chamber on the lower part, and the manner of operating the Pump, which is done by a double lever above and below, connected by two rods, and the upper part is stayed by a pair of braces screwed to the platform. This arrangement combines greater strength and permanency than those heretofore described, and may be worked with greater efficiency by one or more persons at each end of the lever. It is considered, consequently, the best arrangement for deep wells. Capacity the same as the last.

5. *Irrigating and Draining Force Pump.* Three sizes: 4 inch bore, 6 inch stroke, 1 gallon every 2½ strokes; 4 inch bore, 10 inch stroke, 1 gallon every 2½ strokes; 6 inch bore, 12 inch stroke, 1½ gallons every 2 strokes. They are particularly adapted to positions where a large amount of water is required, are very strongly constructed, and may be worked by hand or machinery with great power and velocity. They have no rival, and have given the most unqualified satisfaction in all cases where they have been used. For irrigating or draining purposes, where a *strong, easy-working* and *reliable* pump is wanted, they can be confidently recommended. (See the cut in another column of this paper).

6. *Double-Cylinder Pump.*—Two sizes: 3 inch bore, 6 inch stroke, 1 gallon in 3½ strokes; 5 inch bore, 7½ inch stroke, 1½ gallons at each stroke. An arrangement is exhibited in this pump which, for compactness and power, has no superior, in my belief, in the whole range of pumps, if indeed anything can be found that will at all compare with it. It has two cylinders, two discharge spouts, and a double lever, susceptible of being used with wooden handles and arms. It may be used as an ordinary pump, discharging the water from the crooked spout; or by taking that off and attaching hose, it can be made to throw two streams of water with great efficiency upon a three-story building; and by having the wooden levers long enough, any number of men may be brought to bear upon its operation. As a *fire engine*, to be used in large manufacturing establishments, mills, founderies, hotels, or wherever there is danger from fire, it cannot be too highly extolled, and I venture the opinion, that once tried and used, its possessor would not consent to be without it. It can also be operated by machinery.

Such is a brief description of "Barker's Patent Pump." It combines every requisite that can be desired, and stands without a superior, and without a rival. It unites cheapness with durability, economy of power with efficiency of action, and scientific ingenuity with practical utility. I sing the praises of this Pump, simply because I like it. I glory in art, in invention, in improvement. The application of scientific principles to the daily purposes of life excites my admiration and respect. Whether these principles be applied to the fuller development of the mechanic arts, to the better cultivation of the soil, to the more successful working of the mines, or to the production of a higher order of domestic animals, I am equally gratified, and ready to record and communicate the fact.

Every discovery and every invention, in order to be useful, must be brought to the general market of the world; and though modest merit seeks not publicity, yet it is made the duty of every lover of art to bring it forth to public view. By this means individuals are benefited and the race advanced. Things the most superficial and the least valuable are too often proclaimed in trumpet tones, while things of solid value and real worth are left to make their way as best they can. People are often captivated by loud-mouthed vociferation, and not until they have suffered much and paid dearly for their credulity, are they able to see that they have been most egregiously duped.

Let the reader be assured that the writer of this communication has no ax to grind, no interest whatever to promote, directly or indirectly, but that, having examined this Pump with great care and thoroughness, and believing it better adapted to meet the wants of farmers, gardeners, nurserymen, families, hotel-keepers, manufacturers, machinests, miners, and all other classes, than any other pump ever yet constructed, he has felt it his privilege and his duty to say so. For irrigating a dry and arid soil; for watering plants and garden vegetables; for laying dust, and washing sidewalks, windows and carriages; for securing sailing vessels, steam ships and dwellings against conflagration, and for the manifold applications of water to the varied purposes of daily life, I know nothing superior, nothing to equal it.

It can be seen in operation any hour of the day at various places in this city, and at the store of the patentee, Mr. Jos. S. Paxson, No. 48 California street, where also can be seen a beautiful model, showing the principles of its construction and the astonishing capacity of the Pump.

Yours for true progress, J. H.

SAN FRANCISCO, March, 1858.

The Axle-Grease Question.

EDITORS FARMER: We notice an article in your issue of the 19th inst., relative to the use of castor-oil as a superior wheel-grease; and you further throw out a suggestion, that the cultivation of the castor-oil bean would enable us to "*make our own axle-grease.*" Now, sirs, we thought you were already cognizant of the fact, that not only every part of the raw material from which our highly favored anti-friction grease is prepared, is of California produce, but it is also *manufactured by us in this city!*

We may also state, that as castor-oil is one of the ingredients employed by us, we should be happy to learn that its cultivation was in progress; and more so, because we would suggest that the raising of it *might* be equally as efficacious in destroying gophers and other vermin, which infest our agricultural districts, as the sirup and strychnine remedy, mentioned in another part of your paper.

Respectfully yours. HUCKS & LAMBERT.

SAN FRANCISCO, March 29, 1858.

We thank our friends, Messrs. Hucks & Lambert, for this information; we hope it will induce the cultivation of this plant.

GOOD BREAD.—We publish in this issue the Report on Bread which we had the honor to submit in behalf of the Committee at the State Fair, and as we should like to try another experiment, we will say to all those millers that would like a test made uniformly by *one* good *housewife*, if they will send samples of their flour to us we will make the trial, and have the result publicly shown; we will do the matter up brown, and hundreds shall see the *bread*. We acknowledge the receipt of a sack of flour from the Union City Mills, for this purpose. We should be glad to have a good test made of flour at the present time. To Messrs. Reynolds & Co., agents of the excellent mills at Union City, we tender thanks for their sample; it will be remembered. It will be remembered we have *the* sample bag—the *Premium Sack* of 1853—*perfect* now. This will be tested at the same time.

NEW ADVERTISERS.—Please see our new advertisers in this week's issue: Messrs. Figel & Brothers, clothing; Pidwell & Co., furniture. Who goes East? See ships up for New York.

State Agricultural Society's Reports.

[Continued.]

ALFALFA, &c.

THE committee to whom was referred the following articles, for awards, ask leave to report: upon alfalfa, Chinese sugar-cane, beans, flax, broomcorn and hay.

The committee find on exhibition a sample of alfalfa from the Quintay Farm, Marysville, Yuba county, marked "specimen," with roots eight feet long. The committee regret that a full report did not accompany this fine specimen of the alfalfa, as it is one of those articles of product that are destined to make a revolution in the matter of the feed of stock, and as it is a subject matter which particularly received the notice of the President of this Society in his opening Address.

There were samples of other clovers, some of native species, of great excellence. A sample of clover from Windsor Farm, by Mrs. Rhodes, of remarkable growth, deserving notice.

A sample of clover by Jacob Haeflich, Calaveras Meadows, of superior quality, yielding four tons per acre.

These all coming under the denomination of hay, deserve the notice and encouragement of the State, through the official organs.

One sample of beans, only, was exhibited; a sample of white beans, upon the vines, very luxuriant, the product of one hill, raised by J. A. Austin, Esq., Stockton. When this product shall be properly understood, and the quantity known that has been and is continually imported, a wise attention will be given to a crop that will always pay, if planted upon the right kind of soil. The cultivators of the soil should be aware that the people of California pay, annually, for many thousand bags of beans, imported from foreign ports, and thus a competition is brought to bear with a home product, that a little knowledge of the subject would enable them to defy, and even become rivals in the very ports that now send to us.

FLAX.

One sample only was exhibited, by J. B. Manny, of San José, the product of one acre. No particulars accompany the sample. The matter is referred to the executive committee.

BROOMCORN.

Samples were shown by two persons, and not entered, which is very much to be regretted, as this product is one of great value to our State. Thousands of acres of broomcorn have been raised the present year, and such has been its influence, that the importation of brooms, which has, heretofore, been large, has almost entirely ceased; and the brooms made in California are better and more beautiful than any ever shown from other States.

CHINESE SUGAR-CANE.

This very important, new product of the soil, the committee feel, deserves more than a passing notice, although they regret that the growers of the various samples put on exhibition did not furnish the necessary and greatly needed statistics, to explain the quantity grown, and the products therefrom, and all the details so valuable to our State, for the future growers of this great staple. The committee found, on exhibition, samples of the cane, grown by B. W. Bourse, of Stockton, ten feet high; E. S. Holden, of Stockton, eleven feet high; T. K. Hook, of Calaveras; G. E. Clark, of Antioch, eleven feet high; L. A Gould, of San José. The last mentioned, represented a crop of two acres, said to be equal to thirty or forty tons per acre. All these specimens are well grown, and full of heads.

From all reports upon this article, we find it, generally, to be grown without irrigation; and it is to be hoped that all the growers will hereafter report in full upon all crops grown, and the manner and full system of cultivation. Your committee earnestly hope that all the contributors to our Fair, hereafter, will consider this particular subject, and, by keeping a record of the time and manner of planting, quantity planted, and amount harvested, they can, by so doing, confer a lasting good upon our whole State, and thus each grower become a benefactor to his neighbor.

The committee cannot close this report without the special remark, that, although the articles embraced in the list to report upon have not been more largely represented, yet they believe there have been grown, the present year, in California, many hundreds of acres of alfalfa and other clover, and many scores of acres of sugar-cane, hundreds of acres of beans, thousands of acres of broomcorn, and acres of flax; and it is to be hoped, nay, strongly believed, that a brief time only can elapse before all the articles named by your committee shall be among the great staple products of California, answering all her wants in these articles, if not to be largely exported.

Some articles entered, without name or number, the committee refer to your board for adjustment.

All of which is respectfully submitted.

For the committee, J. L. L. F. WARREN.

FOWLS.

The committee appointed to examine fowls, submit the following report:

We found no turkeys, geese, nor ducks, on exhibition; but some fine exhibitions of fowls, Nos. 4 and 5, by Messrs. Long & Brother, of Alameda county, to whom we award the premium.

JAMES LAWSON,
CHARLES ASHLEY,
C. W. COOK,
H. M. FANNING, } Committee.

PLANTS, FLOWERS, AND EVERGREENS.

The committee on plants, flowers, bouquets, etc., submit the following report:

The collection of pot plants, roses, bouquets, and dahlias, exhibited by Mr. James O'Donnell, of the United States Nursery, San Francisco, is fully entitled to the first premium for the following assortments, viz: the largest and best collection of pot plants, best one hundred and fifty varieties of roses, largest display of dahlias, two best vase bouquets, six best hand bouquets. We recommend a special premium of twenty-five dollars to Mr. O'Donnell, for his collection of native ornamental trees, many of which excel, in beauty and elegance, some of our European evergreen, ornamental trees and shrubs.

Your committee also award to M. S. Prevost, of San José Nursery, second premium, for second best collection of roses. We would also award to L. Prevost, first premium, for the best one hundred and fifty yards of floral wreath.

And your committee further recommend a special premium of ten dollars, to Mr. Myers, of Alameda, for a seedling geranium.

WM. F. BRYANT,
J. C. FALL, } Committee.

DOMESTIC BREAD.

The committee to whom was referred the subject of domestic bread, ask leave to make the following report:

The bread before your committee numbered forty-five loaves, sent in by thirty-one contributors, and presenting as fair show as was ever set before a hungry man; and your committee were called upon to notice all those features that go to constitute a loaf of *good* bread.

The flour of which the bread is made depends in a great degree upon the grain from which it is made, and also upon the manner in which that grain is ground and bolted.

The committee established a rule, in commencing their investigation, to reject all bread which contained butter, soda, saleratus, etc.; and this investigation was pursued until some five loaves were selected. From these were then selected the best, and thus the committee arrived at their awards.

The committee notice the prize was a silk dress, valued at fifty dollars. Presuming this character of prize was given without reflection, and a silk dress, of fifty dollars, being so inconsistent in connection with a reward for pure domestic industry, the committee would hope that the prize may be changed to a piece of silver plate, which may be appropriately engraved, so that it may pass down as an heir-loom in a family that thus educates a daughter, at the early age of eleven years, to excel all other competitors in our State, and wear the great honor of making the *best bread in California*. Such a daughter does honor to her parentage and to the State, and her works hereafter will also further speak her praise.

A box of bread of very superior make was received too late—after the committee had closed their labors. It was so excellent that the committee commend it to the special notice of the Executive Committee.

The committee, in closing their duty, hope this first effort to awaken the community to the subject of good bread, may be followed by an increased interest, so that the next State Fair shall present hundreds of loaves of bread, all even of a superior character.

All of which is submitted on behalf of the committee. J. L. L. F. WARREN.

MARBLE WORK.

Your committee, to whom was referred the duty of examining specimens of marble work, beg leave to report:

That we have examined several specimens, from different contributors, consisting of a marble mantle-piece, and a grave-stone, by. P. J. Devine & Brother, of Sacramento, of superior merit. The former, a mantle-piece, made of Italian marble, has great merit, as being a superb and appropriate piece of native sculpture, as well as its architectural design. The latter, a grave-stone, of native marble, designed in the Gothic style of architecture. The base, or plinth, is made of sand-stone, found on the Cosumnes river. The work does great credit to the artisans; we therefore award them the premium and a framed diploma.

Benedict & Roberts exhibit several specimens of California marble, in plain blocks, and a monument. From the specimens before us, we think them worthy of note, and recommend that a diploma and fifteen dollars be awarded them, for the purpose of encouraging this branch of industry, for practical use.

Andrew Vinson, from Columbia, exhibits a square block of native marble, which is to be sent to Washington, to be placed in the national monument, by the miners of Columbia. It is remarkable for its solidity, and is susceptible of almost as high a polish as the Italian marble. Your committee recommend that he be awarded a special premium.

All of which is respectfully submitted.

M. H. BOND, Chairman Committee.

We, the undersigned, being appointed a committee on native marble work, beg leave to make the following report:

That the samples of Columbia marble, on exhibition, were of superior workmanship, and the quality of the same very fine. We would recommend to Messrs. S. H. Benedict & Co., of Columbia, for a fine specimen of marble monument, a framed diploma and five dollars. Also, to P. J. Devine & Brother, of Sacramento, for a superior tombstone, a diploma and five dollars.

H. M. BOND,
T. J. STROUT,
DR. CHALMERS, } Committee.

Plowing by Steam.

AT the late Annual Meeting of the U. S. Agricultural Society at Washington, of which we published a brief report, Judge H. F. French of New Hampshire was called upon for a report of his recent visit to Europe as Commisioner of the Society. Among other things, after stating that it was sufficient passport for introduction to the most distinguished society, that he came an American farmer, and a member of this Society, he said (as reported) he would refer specially to the subject of steam plowing. It was profitable, and he thought would be generally adopted in this country. He described to the meeting three different steam-plows and plowing-machines that he had seen. The plow form of implement he thought would not be adopted in the United States, but rather a spading or digging machine.

Colonel B. P. Johnson, of New York, believed that steam plowing would be profitable in this country. No comparison, he thought, should be instituted between the United States and Great Britain, because of the dissimilarity between the conditions of labor and all the details of Agriculture. In Great Britain it had been proved beyond cavil that it was profitable. In fact Fowler and Boydell, too, were now plowing by contract at less per acre than the usual cost of plowing by horse-power. In 1851, when he was in England as our special Commissioner to the World's Fair, he had seen Fowler laying tile by machinery better and cheaper than could be done by hand work. In our own country we already had the Rotary Digger of Dr. Evans, which he thought might be ultimately successful. The double Michigan plow pulverizes our fields as well as plows them at one operation. The English plow lays the furrow-slices flat and so compactly as to require the employment of a heavy harrow and a heavy team. In the year above mentioned he had triumphantly established the superiority of the American plow, in the face of all prejudice and opposition.

A CURE FOR ASTHMA.—There are many well attested cases of cures of this distressing complaint by the use of the Wild Cherry, as combined by Dr. Wistar, in his famous Cough Balsam, which medicine has achieved a world-wide reputation. None genuine unless signed I. Butts on the wrapper.

SONG OF LIFE.

BY BELLE BUSH.

Once I stood beside a river, where the waters danced along,
Bearing over on its current murmurs of a pleasant song.

Gladness claimed it for her mirror, and the angel beauty came,
Dripping with the sunset glories, giving to the waves her flame.

Clear, and beautiful, and smiling, to the stream of life I cried,
And my tiny bark I hastened quick to launch it on the tide.

But, alas! while thus the waters sang and prattled at my feet,
Lo! another stream came dashing from a mountain's lone retreat.

Dark and turbid in its flowing, lo! they mingled into one,
And I sorrowed that the beauty of the pleasant stream was gone.

But I learned a needed lesson from the water's fearful strife—
For a something whisperd near me, thus it is with *human life*.

Youth had woven dreams of beauty all too bright for one of earth
I had yet to learn that Sorrow goeth hand in hand with Mirth.

Soon its grasp, so cold and chilly, wove its frost-work o'er my heart,
Till the lesson it enshrineth *never, never will depart*.

Ever since hath Sorrow striven for the mast'ry over Joy,
Sporting with my fondest pleasures, striving with my hopes to toy.

All life's early cherished treasures, all the brightest and the best,
Like pale flowers of Summer's weaving, in the grave have gone to rest.

But there is a spirit in me strong to suffer grief and pain,
For I know that he who sends them will not let me strive in vain.

Youth's bright gushing songs of gladness bursting forth with passions high,
Feelings that have waked no sadness, in my soul's deep fountain lie.

Oft I hear their voiceless music, thrilling all my being through,
Till returns life's early freshness, with its sunshine and its dew.

Oft there quivers o'er my spirit, playing with its mystic chords,
Something of a mournful gladness, which can never live in words.

Joy and sorrow, pain and pleasure, in my soul's deep fountains dwell,
Like the mingled lights and shadows in a shaded sylvan dell.

But I never pine in sadness, never feel the joy of mirth.
That there does not come a vision of a brighter clime than earth.

Something like an angel spirit seems to whisper in my ear
Of a stream whose limpid waters floweth ever bright and clear.

By its shores, in sunny gladness, dwell the loved of other days,
Where the solemn harps of sadness wake no more their haunting lays.

A Series of Musical Entertainments,

Given to the Contributors of the California Farmer.

BY M. A. SARLES,

Professor of Music and Elocution, in the Collegiate Institute at Benicia.

LECTURE FOURTH.

PROGRAMME—PART I.

1. Yankee Doodle, with variations, composed by Strakosch
2. "Largo al Factotum," "Il Barbiere de Seviglia"....Rossini
3. "We Live 'mid the Bounding".....La Fille du Regiment
4. Serenade.....Der Freyschutz

PART II.

1. Norah, the Pride of Kildare.
2. She Wore a Wreath of Roses.
3. Grand Waltz from Lucretia Borgia.
4. Never Despair.....Braham

PART III.

1. Tarnation Strange.
2. 'Twas Ten o'clock.
3. Misfortunes.
4. "La Bamboula".....Gottschalk

LADIES AND GENTLEMEN: Music does not sympathize with daylight, when business and care, and all the active energies of mankind are called into existence; it does not peep into the heart when, outside the door stand the crowd of selfish and noisy anxieties, constantly striving, constantly bustling to obtain an entrance into man's audience chamber. They are not modest, unassuming aspirants for notice, but urge their separate claims with all the pertinacity of self-important assurance, and modest music shrinks with abhorrence from a contact with them, as the blushing maiden, ere the experience of the world has taught her its painful lessons, would shrink from the rude observation of uncultivated barbarians; but when the active hours of life are over, and, tired, careworn, and disconsolate, the business man returns to his home, Music steals into his heart, and, with her soft and gentle soothings, lulls him to forgetfulness of his troubles. She sits upon the doorstep of his heart, if perchance its doors are closed, and skillfully plays with the silver strings of feeling, until it withdraws the bolt, and becomes the home of the Music Fairy. There is a poetry about Music that never appears as vividly as when the Day God has retired behind the western hills, and the Queen of Night comes sailing through the floating clouds, attended by her bright-eyed courtiers. Then, when the mild and gentler influences weave their magic threads about us, does it seem to us indeed the poetry of life, and do we acknowledge that its power is one that can only aid us in our higher and nobler pastimes. Moonlight seems to appeal to the imagination, and robes each moonbeam in the glittering garb of a fairy—throwing them like jewels upon the sleeping water, or like diamond-dust upon the meadows, the hills, and the mountains of the land. Every wave seems to us an enchanted ground, inhabited by myriads of elfins, and every tree and bush seems the incarnation of a genii. But it is Music that stamps their images upon our minds, and hightens every beauty; that endows them with poetry, and enables us to envelop them in an atmosphere of romance. In the hours of moonlight we are released from all save the more agreeable companions of our everyday existence. We are not fretting over our briefs, pondering over our journals, and shutting out every thought of romance, but, leaving them to the day, we determine to strew the hours of the night with flowery relics, and cherish the fancies that *will* come to us if we call them. Then we discover, as we listen to Music, either whispered by the choristers of Nature, or when swelling from the lips of human creatures, that there is a poetry in Music. We hear it in the gurgles of the brooklet, in the roaring of the white-capped surges, in the soft and gentle moaning of the breeze, and the tragic notes of the night birds; and thus Nature fills our ears with her music, if we do not listen to the silvery tones of a loved one's voice; but when upon some night in midsummer we are sailing upon the glossy wavelets of an inland lake, or are being borne over the depthless tide of the vasty deep, how sweet is music chanted by the rosy lips of her you love—and as you press her to your heart, and as it swells with its irrepressible emotions, you whisper, "There *is* a poetry in Music." And as you list to her trembling accents, as you mark her tearful eye as she sings of parting, as you feel the gentle pressure of her hand as she murmurs of love and devoted affection—ah! you feel the waves of a happiness deluging over you, that, were it to last, would incapacitate you for Heaven.

How beautifully is the poetry of Music illustrated in the lullaby of a mother. I can see her now, as she bends over the cradle of her child and glancing at its little round face, slumbering in the deathlike repose of sleep, she breathes the song that is painted by angels upon the tablets of its infant memory, and that endures until death again receives, in its mysterious embrace, the once sleeping child. How pure the love of that mother; how far removed from selfishness, and how naturally she expresses all her affections for her jewel, in the simple but heartfelt language of Music. It is the language of the heart, and where it exists not, beware, for it is an imperfect organization, and such a one is capable of possessing all the evil passions, and fostering the fire, after it has been kindled, that is capable of working ruin and desolation upon all in its power.

An equally beautiful illustration of the power of Music, and its poetry, is in its impressive character when used for purposes of Religion. If it can robe itself in the garments of Friendship; if it conceal itself in the arrows of Love; it can equally wear the cowl of a priest, and enchant the soul, while angels fill its reservoir with the waters of salvation. How earthborn and imperfect seems the worship of mankind, divested of its music; and when the solemn organ peals along the aisles of the church its hallelujah, and the multitude join in with its song of praise, how heavenly are the influences that surround us; how elevated and noble our thoughts, and how infinitely more holy seems our worship. We bow with feelings of deep emotion, and with contrite spirits as the choir and congregation chant in unison the "Gloria in Excelsis"; but how cold and indifferent do we often feel, and hate ourselves for the feeling, when without music we speak the same hymn of praise. But music comes from God, and is the heavenly language of angels, as we are told by the inspired writers themselves, and it is no wonder, therefore, that our *spoken* thanksgivings lack the reality that renders them so sacred and heartfelt when we *sing* them.

Although we know that Music rarely sympathizes with the daylight, yet we are likewise assured that if we were equally free from the bustling cares of life, at the hour of noonday, we could equally enjoy its presence; but it must be stirring and active, and appeal forcibly to us. Martial music, for instance, how impressive is it; even when our heads are filled with practical problems and scores of figures. It enlivens us, it infuses new spirit into us; but if we listened, our mathematics would speedily leave our presence.

But the poetry of Music is most apparent when the solemn words are chanted, "I am the Resurrection and the Life." How they thrill through every nerve; how the minor tones open the most deeply concealed fountain of tears; and how vividly the music brings home to us our loneliness, and the uncertainty of life. We bow our heads, and weep bitterly as the sacred words are solemnly chanted. We feel the dreariness of death, the cold, damp chill of the musty grave, the narrow confines of the coffin, the hollow sounds of the earth thrown upon it, and sunshine vanishes, and sorrow clouds the mind; but the words of hope are whispered, the funeral chant ceases, and the future is painted, and, all at once, we fail to shiver at the sound of the mold upon the coffined form of our friend. We are dead to its awfulness, and the open portals of Heaven's Gate beam upon us, and suffuse the shadows of gloomy thoughts with its glorious radiance. Death seems an angel of deliverance; the grave a pathway to happiness, and the hateful shroud as beauteous as a wedding garment.

Music is indeed divine; the influence it exerts in connection with Religion is most fortunate for mankind, and we cannot be too thankful for a blessing so inestimable, a blessing without which Nature would be silent, and mankind still more sinful. In every vista it is the sunshine that illumines the shade. In the darkest night it is the compass that gives us confidence, and is the secret influence of God, that is warning us ever of virtue and its reward. With the hope that it may ever be cherished by my audience, and that its happy and genial smiles may ever cheer them on their way, I hasten to commence the other portions of my entertainment, asking your kindness where I fail to please, and your applause when I meet your wishes.

1. The origin of the term Yankee has of late excited considerable discussion, and has called forth many facts, in the possession of antiquarians, that otherwise would never have been known, very probably, to the public. The opinion seems now to be satisfactorily proved that it originated from the indifferent pronunciation of the Indians; they calling all white men, indiscriminately, English, or, in their language, Yengees. Yankee Doodle originated from a burlesque song, much in favor with both the officers and soldiers of the British army, and which they sang in derision of their untried foes; but the air was an unfortunate one for the army of a king to use, as it was the same in vogue with the cavaliers, and derided the abilities and military renown of Oliver Cromwell; but the fields of Naseby, and Culloden hushed it forever, and Bunker Hill and Yorktown threw it into the hands of the colonists, who played it with great sarcasm thereafter, as a national air. Since, it has become world-renowned, and the remarkable advance which the United States has made in power, extent, and refinement, has caused its notes to ring in every quarter of the globe.

Cold, cold in the tomb, the lips that sung it yore, are mouldering, and we who gleefully hear it now, will soon fade and disappear; but we have the satisfaction of knowing that our children's children will cherish its tones with affection and pride, and that when the United States have attained to a power far superior to that of ancient Macedon, Rome, and Greece, Yankee Doodle will remain, simple as it is, the pride and glory of the most powerful Republic that has ever existed. The variations of Strakosch are brilliant, and are recommended.

2. Giacchius Rossini, the most successful Maestro of the age is an Italian, and was born in 1792. He commenced his musical studies at the age of seven. His first essay was a cantata, "Il pianto d' Armonia." His first great success was "Tancredi." His second triumph, "Il Barbiere di Seviglia," which was a perfect failure the first night of its representation, was repeated, the second night, in a rage by the management, and was strangely successful. It has since become the most popular opera on the European stage.

"La Cenerenbola," "La Gazza Ladra," and "Semiramide" have always been enthusiastically received. "Guilleaume Tell" is the *chef-d'œuvre* of this Maestro.

"Mosè in Egitto," and "The Stabat Mater," are his most celebrated secular compositions. They are distinguished, not only for the delicious melody which runs through them like rays of sunlight, but for the sublimity and effectiveness of their choruses, the pathos of their solos, and the earnest, religious fervor which is apparent throughout both compositions.

Rossini has amassed a stupendous fortune by his works, and lives like a prince. He is a genial companion, and is therefore immensely popular with his immediate companions, and, by his liberality, has not only won the admiration, but the love of the people.

3. The opera from which this selection is made has attained a very great popularity, and from the novelty of its subject, and its vivacity and brilliancy, will continue to maintain its stand for a very long period of time to come.

The other works of this eminent composer resemble each other, but the "Child of the Regment," strikingly original, and beautiful in style as it is, placed a laurel crown upon his brow, and established his genius beyond dispute.

4. The taste for German music seemed to languish in England until the production of "Der Freyschutz," in 1824, at the English Opera-house, when suddenly as the course of a comet, the public feeling launched at once in its favor, and Weber became an immense favorite; and when after repeated solicitations he appeared in London, he was received with the most marked attention. Writing to his wife, he says:

"My best, my beloved Caroline, through God's grace and assistance I have met this evening with the most complete success. The brilliancy and affecting nature of the triumph are indescribable. God alone be thanked for it. When I entered the orchestra, the whole of the house, which was filled to overflowing, rose up and I was saluted by huzzas and waving of hats and handkerchiefs, which I thought would never have ceased. They insisted on encoring the overture. Every air was repeated twice or thrice. So much for this night, my love, from your heartily-tired husband, who however could not sleep in peace until he had communicated to you this new blessing of heaven."

One does not know which to admire most, the devoted affection of the husband, his beautiful and touching modesty, or his humility in acknowledging in the moment of triumph, his indebtedness to God. None but a mind of great purity and amiability could ever have written such a letter. I cannot, kind friends, give you an adequate idea of his operas by this selection, but as it is the best I have, please accept it.

PART II.

1. John Parry has long retained a position as a ballad singer, that renders him a star whenever and wherever he appears. His ballads are noted for their excellence, and are very generally popular; this one, however, was only sung by him, as Mr. Horn is the composer.

2. The author of this ballad, Joseph Philip Knight, has produced many very pretty compositions. This was one of the most celebrated songs of Mrs. Wood, who for a long time remained a star with English audiences, and appeared with great success in our American theatres. Weber says of her, when she was Miss Paton: "She is a singer of the first rank, and I cannot see why English singing should be so much abused. They have a perfectly good Italian education, fine voices and expression."

4. "Never Despair," is the last ballad of the most illustrious of English musicians, John Braham, who has always been a prominent object of notice, and who has invariably sung to overflowing houses.

In 1796, when he was only nineteen years of age, he made his debut in the oratorio of "Jeptha," and by the unusually fine quality of his voice and his depth of feeling won at once the admiration of his hearers, and became so renowned that he could have at a single bound placed himself in a first position; but with rare maturity of judgment he preferred rather to perfect himself in his studies, than to become a mere evanescent meteor; and refusing the alluring offers made him he at once applied himself to the finishing of his education. He remained secluded for four years, when he made his re-appearance, and has been rewarded for his far-sighted policy by remaining during the extent almost of his lifetime the lion of the musical stage. His voice was of wonderful compass, and he mastered difficulties of the most discouraging character, with great apparent ease. This may be illustrated by an anecdote that is related of him. In 1799 he was engaged to sing at La Scala, with the celebrated Mrs. Bellington, and during the commencement of the season he became so popular that the lady's husband grew jealous, and intrigued with the management to injure Braham. The effect of his influence was soon perceived by Braham, and as Mrs. Bellington acted in concert with her husband, he determined to take a novel revenge. In the first act of the opera in which they were performing, which was one by Nassolini, the first grand air was one for a tenor voice; so, carefully studying all Mrs. B.'s elaborated ornaments, upon the night, he introduced them all in his execution of the first aria, and consequently completely nonplussed the jealous husband and wife. The affair created considerable ill feeling, but the two great singers good-humoredly settled the matter by becoming good friends.

The celebrated David said of this tenor: "There are but two singers in the world, I and the Englishman."

Braham has two sons, who have attempted to wear the mantle of their father, but neither have become very eminent, although their education has been carefully attended to. It is a somewhat notable fact, that those men who attain the summit of fame, very rarely have children who can succeed them.

"'Twas Ten O'clock," is not a comic song, but as it is one that always has been popular with the English public, I shall take the liberty of singing it for you.

It was first made celebrated by Madame Mara, who at one time was hailed with almost universal enthusiasm. She possessed great beauty of person, attractive manners and the most brilliant and versatile talents, and at the time of her farewell benefit in England, cleared

over seven hundred pounds. She retired from the stage and lived in the vicinity of Moscow, but was ruined by the burning of that city. Having lost her voice, she possessed but a scanty pittance for her support, and died in poverty at the advanced age of eighty-four. Sad, indeed, was her fate, but too often do a fickle public abandon in their years of misfortune those of whom they have made idols in prosperity.

The study of the Piano-forte is now becoming univeral throughout the United States. In every house claiming refinement, an instrument is found, and some one of the family who can "play and sing." Among European aristocratic circles it is not only necessary to "play," but almost indispensable to "play" *brilliantly*. Prince Albert has the reputation of being the most artistic amateur in England. Queen Victoria is a finished musician, and the Royal children are receiving a thorough musical education. The greatest operatic success on the continent, last season, was the work of a German Prince. It is fortunate that fashion has led to the cultivation of such an elegant and social accomplishment. In our country, piano-forte playing is yet in its infancy. There are few who can perform with any style, few who are willing to study as hard and practice as systematically as is necessary to attain *any* marked success; but we can boast of having produced the most *original, national*, and one of the first artists of the present age in Gottschalk. He is not only admirable in the fashionable bravura style of performance, but has a delicate appreciation of the masters of the classical school. In Spain he has delighted the Señoritas by his Spanish rendition of their peculiar music. In Germany, he has carried off the palm as performer of Beethoven's Sontatas. In France, he has enchanted the salons by his wonderful execution; and in England and this country, he has received wherever he has appeared, an ovation. On the continent his Southern nigger airs have created a perfect furore; and his "Bamboula" has passed through innumerable editions. He is the only artist who has ever dared to appear at the same time with Thalberg.

Thalberg and Litz are the Princes of Pianoforte players. The one enchants his hearers, and has even melted his audience to tears; the other astonishes and electrifies them by the energy and grandeur of his style.

Strakosch is the most popular performer next in order, who has visited the United States; for while De Meyer has opened the eyes of his audience in astonishment by his manipulations, and Taell has pleased the ladies, Strakosch can fascinate all classes, and although without a classical education has true genius, and is a fine artist. His compositions suit the public taste, and command a ready sale.

A son of Lowell Mason has recently received the applause of the dilletanti of New York, and is said to give promise of a brilliant future. Frank Bassford, who was among the passengers on the ill-fated Arctic, possessed brilliant genius. His published compositions have attracted much attention. He would unquestionably have risen to a first rank.

The Influence of Home—"Social Perils"—Divorce—The Sphere of Woman.

EDITORS FARMER: Who has not felt the influence of the associations connected with the home of childhood? Widely may the household bands be scattered. Far may they roam in every quarter of the world, yet memory will cling with fond tenacity to the scenes of home and youth. The father, to whom we looked for protection, sustenance, and advice, perchance, long since, sleeping with the dead: Well can we remember his looks of love; we can almost hear the manly tones of his voice, as he joined in our childish sports, or sung with us our evening hymn. From out the memory never can be erased the form and image of him who was the head of our social and family circle. Our kind mother, too; on the pure white page of our infant minds she wrote those mystic characters which will last through life; aye! which will be transmitted to succeeding generations. Alive to every virtue, and careful to inculcate the principles of rectitude, what bounds can be placed onto the influence of a true-hearted, womanly mother? And our much loved sisters, they "who grew in beauty side by side, and filled our home with glee." The recollections of their ringing laughter, and of their fond and pure caresses will oftimes steal across the soul, when burdened with the cares of business, in the haunts of pleasure, and in the loneliest solitudes of a city life where all are strangers to us.

Amidst the scenes of Nature, who can be alone? With thousand voices, and ten thousand tongues, she ever holds communion with the soul of him who will listen to her teachings. Seek not for solitude in nature. She cherishes glad thoughts, and gently, by some winding brook, or lofty tree, or drooping violet, will turn our wearied minds unto the home of youth; and in the magic mirror of the past we live again amidst the scenes of early years. Ye spirits of departed ones, among whom we were wont to play, have ye not often looked down upon us, as we reclined beneath a spreading oak? And from your heavenly home, have ye not plumed your pinions earthward, and swept by upon the zephyrs as they have kissed our fevered brows, while we have wandered in this land of gold and greed? Separated from all that remains of our once happy family circle, how wildly yearns the heart of every one for some spot of earth it can call its own. *A home* is the one great necessity of mankind, and, to form this, what is needful? First, the union of two loving hearts. Before the altar of God they pledge "to love, to honor, and to cherish one another, through evil days, through good days, and until death." This is the nucleus. And here we pause, to consider the solemn import of the words just quoted. Not for gold, not for position, nor for a home alone, does the true bride appear before that altar, and plight her faith. Nor does the bridegroom dare to approach that holy place, and there make solemn oath to perform all that the marriage rite requires of him. Looking back to the home of childhood, and guided by its influences, he ponders long and well ere he is ready to repeat the words that seal this future earthly fate for weal or wo. In a new country, and one of as cosmopolitan a population as ours, where gold is the lever that moves the whole social fabric, it would be strange indeed were there not some unhappy unions formed by those who, from long estrangement from early associations, from mere sensual desires, and from expediency, enter the matrimonial state, without due consideration of its duties. But what can justify the record of divorce that to-day disgraces our community in the eyes of Christendom? a record over which angels might weep, and fiends of hell sorrow that the inhabitants of our bright and happy earth could vie with them in deeds of darkness. Why does society countenance those who lightly sever the bonds that should last through time? Is it not written, "That if a woman, while her husband liveth, shall be married to another man, she shall be called an *adulteress*?" When the time comes that divorced parties are looked upon as they deserve there will be no need of legislation upon the subject. When he who violates the rites of hospitality, and desecrates that holiest spot of earth, the family circle, shall be banned by society, shall be branded as "beneath contempt," and turned from among his fellow men as a thing too vile to herd with the lowest of mankind, then will the ravages of the seducer and the libertine be checked.

Ye ministers at God's altar, preach His word as ye find it written; ye who conduct the press, speak in clarion tones of the monstrous evils countenanced by that moloch, falsely called "good society;" fathers take heed of your children's walks; and mothers, by precept and *example*, train up your daughters so that they do not sell themselves for gold, to worse than a life of infamy, to end an unhappy career by a "legal divorce." Divorce from what? Let those who know answer the question. Think first of solemn vows in presence of God, of angels and of men. Think of the thousand endearments of home; of happy hours spent together ere the tempter came to Eden. Think of the offspring cursed and well nigh bowed in shame by this public record of the degeneracy of their parents, and answer—divorced from what?

Disgusting, terrible, and hellish as are the passions that destroy the foundations of happy homes, yet they are pure and holy when compared with those which work the ruin of innocent and lovely girlhood; for the demon in human form, who gains the love of a meek confiding girl, only to sacrifice it upon the altar of his sensuality, there is no name in any language under the sun to express his baseness and degradation. With society she is the victim. He can pass on, caressed and honored, through life, when the mark of Cain should be stamped upon his brow, *lest any should be polluted by contact with him.* Truly did the editor of the Times remark, in a recent article: "The sooner we preach the gospel of death to the seducer, the sooner will society be rid of these monsters.

Will your lady correspondents who have writen so much, and tried to bring out the ideas of others upon the subject of the true sphere of woman, allow a constant and friendly reader to remark, that they can set an example worthy of imitation in many respects. Do they visit, almost nightly, a fashionable public ball-room? Do they receive, with courtesies and smiles, the bows and grimaces of every perfumed dandy who is led up to them for an introduction, and who solicits their company for only one dance. Woman flies off in a tangent from her true sphere, when she frequents such places of resort; and the acquaintances formed there are, many times, not of the purest character. I would not be understood as opposed to dancing as an exercise, or in private circles; but most distinctly so, when the door is open to all, and money the test of morality.

Ere long, when the evils treated of in the article before alluded to shall have become so glaring that the community will awake to the dangers that surround the young, they will render the verdict that these ball rooms have been charnel-houses of much of virtue and purity. Surely, there, can *not* be the sphere of woman. No, she was formed for a nobler destiny than to glide for a short time through the mazes of a dance, and then to fade forever from our world, leaving naught behind to tell that she had lived, and none to weep, save with joy that death had saved her thus early from a life of disgrace and isolation.

Susceptible of, and earnestly longing for the love of the sterner sex, the true woman finds delight amid the scenes of home. She takes her place with pride among the matrons of the land. Her children are her jewels; her husband is dearer to her than life. Perchance a desire for "a little more of this world's goods" may cause her, for a time, to regret that her lot was not differently cast; yet her true womanly nature will predominate, and she becomes as God intended, a blessing and a helpmate for man.

SOLTERO.

HOW CAN YOU HELP US? We answer: let our agents and friends, our subscribers and patrons, all be prompt with their dues, and we can constantly plan and labor to make our journal what we intend to make it, worthy the support of every true Californian. How can you help us? We answer: if you owe us five dollars, give it to us whenever you meet us: do not *wait* for us to *ask* it. We are doubly cheered when a patron voluntarily says to us: "here's a five due you; please keep our names on the *red list*." All can do this if they will; and as we pass, in steamer or stage, over the State, hundreds recognise us that we do not know, and thus they can aid us; and we do not forget such parties; they show their good will thus.

REMARKABLE WORKS OF HUMAN LABOR. Nineveh was 15 miles long, 8 wide, and 40 miles round, with a wall 100 feet high, and thick enough for three chariots abreast. Babylon was 50 miles within the walls, which were 75 feet thick and 300 feet high, with 100 brazen gates. The temple of Diana, at Ephesus, was 420 feet to the support of the roof. It was a hundred years in building. The largest of the pyramids is 481 feet high, and 653 on the sides; its base covers 11 acres. The stones are about 30 feet in length, and the layers are 208. It employed 330,000 men in building. The labyrinth of Egypt contains 300 chambers, and 12 halls. Thebes, in Egypt, presents ruins 27 miles round. Athens was 25 miles round, and contained 359,000 citizens and 400,000 slaves. The temple of Delphos was so rich in donations, that it was plundered of $5,000,000, and Nero carried away from it 200 statues. The walls of Rome were 13 miles round.

HOLLOWAY'S OINTMENT removes all discoloration of the skin, and allays the itching and inflammation generated by heat or cold. It takes the sting out of every eruptive disease, and heals by *eradication, not suppression*, all kinds of sores, tumors, carbuncles, scrofulous ulcers, and cancerous disorders.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot.

E. B. HARRINGTON, Esq., UNION, HUMBOLDT BAY. This gentleman, agent of Wells, Fargo & Co., will act as Agent for the FARMER at Union, Humboldt Bay, so that all the friends of Agriculture and the Mechanic Arts, and all who want a good Family Paper, can be suited by calling on Mr. Harrington, and subscribe for the Farmer.

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN AND NURSERY,

On the American River, 2½ miles from the Steamboat Levee, SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES, SHADE AND ORNAMENTAL TREES, GREENHOUSE PLANTS, SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE, embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being CORRECT AS TO NAMES AND VARIETIES, are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of

Shade and Ornamental Trees,

We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

ACHROMATIC MICROSCOPES.

J. & W. GRUNOW & CO., New Haven, Connecticut, invite attention to their superior

Achromatic Simple and Compound Microscopes.

These Instruments have obtained the commendation of the most eminent scientific men of America, and have received the premiums of the New-York World's Fair of 1853, and of the Connecticut State Agricultural Society of 1856.

These Microscopes vary from forms of the greatest possible simplicity to those combining the most elaborate of modern improvements.

They call the particular attention of STUDENTS and TEACHERS to their EDUCATIONAL and STUDENTS' Microscopes; which are provided with object-glasses sufficient for all ordinary investigations, and of a quality never before sold by any American or foreign maker at prices so low.

PRICED CATALOGUES will be sent GRATIS upon application. J. & W. GRUNOW & CO. have also now ready for distribution, an elaborate DESCRIPTIVE AND ILLUSTRATED CATALOGUE which will be sent post-free upon receipt of 30c in postage stamps. *eoply

LINDSEY'S

Double Acting Rotary Force Pump.

THIS is a new Pump, patented in America and England in 1855; and for Cisterns, Wells, Mines, Engines, Railroads, &c., has no rival: in that it works easier at great depths, discharges water at different hights, can be used for a hose, is made entirely of wrought and cast iron, without suction or packing, simple in construction, easily put in, not likely to get out of order, will last for an age, and is cheaper than any other Pump. It has a wrought iron pipe, side gearing and balance wheels, with everything complete to raise water by hand, from one to one hundred feet; and costs, boxed and shipped, from $18 to $60.

It must stand in the water, and will not rust.

Drawings and a full description sent to all parts of the world, free of postage, by addressing the general agent.

JAMES M. EDNEY,
56 John street, New York City.

☞ Circulars to be had, and orders received at the Office of the CALIFORNIA FARMER.

The California Farmer.

SAN FRANCISCO, FRIDAY, APRIL 9, 1858.

The Glorious Rain.

The clouds consigned their treasures to the fields,
And, softly shaking on the dimpled pool
Prelusive drops, let all their moisture flow,
In large effusion o'er the freshened world.
[THOMPSON'S SEASONS.

WHERE in all this fair land is there a heart that beats in a rural home, that does not rise in gratitude and thanksgiving for the blessed rain? Shall man be silent when all nature rejoices? Who can go abroad among the flower-crowned hills and verdant valleys, and not become inspired with the scenes of beauty that everywhere meet the gaze? Who can look upon the fields of grain, that now give promise to us that we shall have "bread enough, and to spare;" who can contemplate the vineyards, orchards, gardens and "happy homes," that meet the gaze everywhere as thickly as the stars above, and not feel that we live in a blessed land, where at this moment everything promises us an abundance of the "fat things" of the earth?

From letters that have reached us from all parts of our State, we have accounts of copious and oft-repeated rains, so abundant as to satisfy all; and many persons who but a few weeks ago were despairing of having any crop, are now complaining that we shall have so great a crop that it will destroy its value; and the same parties are *alarmed* lest we shall not be able to find a *market for the surplus*. To all such, we say remember with gratitude your *present blessings*, and never complain of events or trials over which you have no control. Murmur no more, lest the sin of *ingratitude*, the blackest of all crimes, shall rise up as a judgment against you, and ere the crop be safely harvested, you forfeit the bounty heaven had in store for you.

Go forth into the fields, and learn a lesson from the lower order of creation; see how they testify their gratitude to the giver of all good, for the refreshing rains that have fallen upon the earth. The lowing herd, and the frisky lambs, sport and gambol upon the hills; the birds sing their morning and evening songs; the flowers open their diamond petals, and send forth a fragrant offering; but man, selfish man, only remains silent, and forgets the many blessings that are so profusely showered upon him.

The Dairy.

"Read over *this*, and after *this*, and then
To breakfast with what appetite you have."

WHAT a blessing is health, and yet how few fully appreciate it; how many abuse this invaluable gift of nature; and what a treasure, too, is a good *appetite!* The hour of lunch had come, and we had just been thinking over what we would eat, when our eye rested upon a parcel that lay upon our table, neatly done up in a white cloth sack. Upon opening it we found a tin can of goodly size, and upon the lid the following words, written in a delicate and scholastic style upon gold-edged paper. We give the note in full—its generous tone made us happy; but when we had thanked the giver in our hearts for the generous present, we lifted the lid of the can, and oh ye gods that watch over dairies and dairy-maids! Take our thanks. The maker must have been with the goddess Flora, for surely such a fragrance could not all come from one of the "bovine species," unless they were fed on roses. Won't we lunch! say no more; that "Golden butter" a *Californian* would exclaim, "*manteca, magnifico!*" * * * * *

Well, we *have* lunched, and such a lunch! Thanks, thanks, not only for the gift and our pleasant repast, but for the kind remembrance of our wants. Hot bread shall be tried with this same butter, and our prayer shall be that the kind giver shall have her pathway strewn with bright flowers that shall be ever fragrant. The wishes of E. N. shall be obeyed, and that speedily. Thanks too for the valuable *facts* conveyed in the note. We will go up to their beautiful valley and see our friends, and that very soon:

FRANKLIN RANCHO, April 1, 1858.

COL. WARREN: With this you will find a small can of our butter, which you will please accept, with compliments of the proprietors of Franklin Ranch.

The Lawton Blackberries you sent us have started, with the exception of one, and that will sprout from the root. Very much obliged for those flower seeds; have got them planted, and some of them up.

We have had a glorious rain, and can fairly see the grain grow. I wonder what the flour speculators would think to travel through our valley of Napa now? I think they would weaken, and wish they had not been quite so avaricious.

Jack Frost has not injured the fruit in our immediate vicinity to any great extent. I hear that the peaches and apricots at the Suscol Orchard have suffered severely.

If you come up our way, give us a call.

Very respectfully, yours, E. N.

To Our Readers and Correspondents.

We have still to postpone many favors of our friends. Much copy laid over for next week.

Agricola, received, and will appear.

Tears of Sympathy in a Graveyard, by Mary Glen, next week.

Symphonies, by J. B. M.; D. H., J. M., and "My dog Caro and the two Curs," necessarily delayed.

An interesting letter from S. C. Bradshaw on Immigration, will appear next week.

We ask an eye and a thought to the interesting communication of Soltero.

"Musical Entertainment" should be read by all who love music.

RHYMES FOR THE TIMES.—We are most happy to give a strain of melodious rhymes from our highly esteemed correspondent Agricola. There is a true and most pleasing jingle in it, and we know it will be read and re-read by his many admirers.

Horrid, Horrid Plagiarism.

THIS is an age of Plagiarism, and, as the saying is, "the burnt child dreads the fire," so we now raise our humble voice to expose one of the most barefaced cases of plagiarism on record in the history of our country. We feel called upon to do this, at this time too, from the fact that on the Pacific coast everything seems to have a certain period of time in which it affects our community; no matter what the subject may be, whether it be dueling, street fights, suicides, shipwrecks, weddings, Archy cases, mad dogs, fashions (all but the red petticoat), or divorces; and now the fever runs upon *plagiarism*, and we suppose it must *have its run*.

But our case is one of such startling magnitude, such barefaced audacity, such bold, defiant courage, such daring of our *laws*, both human and editorial, that we feel called upon to make it known world-wide. We are called upon by all the ties that bind us to our editorial brotherhood (and sisterhood, too, for we have editresses, also), to make known this flagrant crime. We are naturally cool, calm, not resentful; ready to forgive; but *this case* is so *wicked*, so *unfeeling*, that forbearance would cease to be a virtue did we not expose it, for we do feel the guilty party deserves to be *gibbeted*, yes, we verily think they should be "*kicked and cuffed*, editorially speaking" (provided we had courage to do it), so that they would become an example, sufficiently to warn all *buccaneers* hereafter. Oh, our indignation is roused, our very blood boils; we know it stands 130° *in the shade*; will not the *intelligence* of this community come to our aid, and help us rid the world of such body-killing, heart-breaking, mind-destroying robbers. We now ask the patient (if our editorial brethren can be patient) attention of our brethren of the editorial staff to listen to our case; and is it not a sad one, does it not demand of them their united and manly sympathy to come to our help, so that we may be redressed in these our wrongs, and thus by our united power prevent any occurrences of the like kind in the newspaperdom of the world, or the history and sufferings of the editors of the present age.

Now then to the facts, and we pray our readers to be *calm*, to be *self-possessed*, be *courageous* and act like *men*, for the world of *literature*, *science* and the *arts*, depends upon our firmness now. Now then, again: know ye, that in order that we might have a quiet spot wherein we could read, write, think and sleep (if editors are allowed sleep), we had prepared a sanctum—up in a third story—and had hoped we might remain unmolested from *thieves* at least (whoever thought of thieves going to an editor's room to steal!); well, we had been quietly laboring and pursuing our duties, and had looked for a little respite from care, when these duties were accomplished. Well, now in this same sanctum, we had stored some nice *food*, a really luscious repast (think of an editor having food), yet so it was; we had prepared upon our table a *pie*, a *nice* pie, a *real* pie—(editors don't your mouth water?)—and had placed it upon our editorial table; but we did not *make* the pie, yet it was an *excellent* pie; we *never said* we made it; in fact as our friends saw it we told them *Wimmer* made it—*Wimmer makes excellent pies*. Well, as we said, we placed it on our table, laid a nice napkin over it, locked our sanctum, and *went abroad*.

Now for the horrible deed. Oh, heavens, give us patience to relate this awful affair calmly. After a brief absence we returned—our pie was gone! *stolen, piratically* carried off; yes, gone. We do not believe there is another such a *barefaced* act on record! Yes, our *pie* was stolen; stolen, the pie so nicely made by *Wimmer*, with all that nice light *crust* that *surrounded* it!

Gone, gone our hopes—gone, gone our pie—
And we were left, alone to—cry!

We had *one* little ray of comfort, however, in this our day of mis-fortune. We had a bottle of wine (think of that), Kohler's Angelica (think of that too! drink of angels for an editor!), *that bottle of wine*, was *spared*. But we know by the letter found there, that *that* would have been stolen, too, had it been found. Merciless thief! would nothing satiate your stealing propensities? But the pie *was* gone—stolen; yes, brother editors, gone, and, what do you think? this creature in crinoline—oh, mercy on us—this theft, this wretched theft was committed by a *woman*—for the delicate chirography exposed it—this creature (she must have been young, active, beautiful, to do so daring a deed), after the robbery, left upon our table the following letter, just as *bold thieves* always do, and we give it *verbatim*. So we may hope to be able to detect the wretch:

DEAR COLONEL: I called in at one o'clock to see you; found the sanctum empty; helped myself to *pie;* found it excellent; presume the wine was, could have told you better if I had found it. I think you are a lucky editor to have pie to eat. Read the Bulletin all the while I was eating; was sorry the pie wasn't mince, instead of apple; I like it better. From the piles of letters laying around, I concluded if you answered them all, you would have plenty to do without printing a paper the next week. Made up my mind to come here whenever I had nothing to catat home! Broke the Commandment which says, "thou shalt not covet thy neighbor's goods," for I wanted nearly everything I saw in your room, but I kept my hands off of everything, but the pie and the Bulletin. I have an engagement at two, and can't stay any longer; if I signed my name, you would know who eat your *pie* and read the Bulletin; and so I'll leave, with my best wishes and thanks for the pie and the Bulletin.

N. B. I would just suggest that *cheese* would not be out of place; I like it very much.

Now can we *call* upon all who *chronicle* great events, daring deeds, wonderful discoveries, and *bold robberies*, to come to our aid, so that we may warn all in this *golden era* that *thieves, robbers, imposters*, and all such, may receive a just *resentment* from the people of the *alta California* of this Pacific coast. We appeal to the people to know if this high-handed act does not deserve the execration of this community. Unite with us, that we may drive such a creature out of our *free* land! Such a thief must be a *foreigner;* else, she would not *dare* do this deed; she knows not our institutions and laws, or she would *tremble* at the crime she has committed.

Now, brother editors, just read that letter again. See with what cool effrontery this *thief* walked straight into our *sanctum*, and *stole our pie.*

Oh had some wretch have struck us down,
At midday in the street,
We could forgive, nor anger shown,
Had we our *pie* to eat.
But this great crime in open day,
To rob us of our food,
We will *resent* in a *manly* way,
As ev'ry *editor* should.

* * * * * * *

What have I done? Slandered a woman? Assailed one made in the image of God, and given to man as his last, best gift? Wretch that I am! I have been *thoughtless, wicked, criminal!*

* * * * * * *

"Forbear sharp speech to her! she's a lady
So tender of rebuke, that words are strokes
And strokes death to her."

* * * * * * *

In my hot haste I have assailed the innocent; have branded the guiltless with reproaches and with crime; robbed her of reputation, honor, and means of livelihood; and all this because of the love of my own self; because my own *food* was gone. But I will undo the deed—though it tear the heart string that holds my pride or my purse! I will be a man, and confess. She did *not* steal the pie! I had forgotten the truth—but I will tell it. I *had said* that the pie was in my room, that it was *free* to all who hungered; I had even bid them *welcome*, said to them, *come and eat!* But forgetting all this; remembering only my *own* appetite, and wishing *all the food* myself—being in a *starving* condition—I saw that my *pie* was gone, and, in my rage, assailed the innocent.

And now help me be a man! As publicly as I have charged the innocent with *theft and robbery*, so publicly will I proclaim her *innocence*, and do my best to make all honorable atonement and I here proclaim to the world: this fair lady did not steal the pie.

NOTE. Webster defines plagiarism to be a *literary* theft. Is *pie* a literary article? Types are sometimes made into pi. Query—Is pi a *literary* article?

Encourage the Mechanic.

We are pleased to see the report of the committee who were directed to examine Overton's steam wagon; and although we regret this committee did not recommend aid at once, yet it is an essential point gained in our legislation to have them recognize the works of the mechanic, and give their approbation. We may hope still, that, after a further trial, it will work so successfully that the inventor shall be encouraged and aided in his work. We learn that a trial was made, and in a great degree satisfactory. Further alteration in some parts of the machinery, which are in progress, will make it completely successful. We append the report of Mr. Banks, chairman of the special committee; and that report speaks in the right tone. Mr. Banks is an energetic worker, and an earnest friend of the mechanics and all their interests:

"The special committee to whom was referred the petition of J. T. Overton, praying for an appropriation of three thousand dollars, to enable him to complete his steam wagon for common roads, having carefully and minutely examined the same, respectfully ask leave to report that, in their opinion, the Overton steam wagon exhibits mechanical skill and inventive genius of a high order; and it will, when completed in accordance with the plans of the inventor, travel over common roads at a rapid rate, and be as easily guided as a common team. This invention is one in which the people of the State of California are deeply interested, as many years must necessarily elapse before railroads, to any considerable extent, can be completed within our borders; and it is believed by many scientific and practical men, who have given this subject their attention, that the Overton steam wagon will, in a great measure answer as a substitute for railroads and locomotives. It is the opinion of your committee that enterprises of this character should be encouraged by the Legislature; and, in common with all who have an interest in the honor and advancement of our young State, we feel a deep solicitude in regard to the success of this invention, but make no recommendation in regard to the appropriation asked for."

FLOUR AND GRAIN MARKET.—The condition of our flour market presents a curious anomaly. Here, in the midst of an abundant harvest, not only of grain, but of every other species of breadstuff, we have the article of flour more than double the price in New York, and twenty-five to fifty per cent above its legitimate value at the present time. A few trivial circumstances in monetary affairs would show this; and we have no doubt, that in one month a decline of twenty-five per cent or more will be noticed; in two months a still greater decline, and on the opening of the new harvest, flour, that now commands twelve and a half to fifteen dollars, can be purchased at about *seven* dollars. Those who have all along prophesied that flour would reach $25 per barrel in April, must see their error now. With our own crop and that from Oregon, the Islands, Chile, New York, and elsewhere added, we shall commence the new harvest with *fifty to seventy thousand barrels* on hand.

THE new steamer, on the Contra Costa route, is receiving marked attention. She is a beautiful steamer, and has been built as an opposition boat. The public will soon settle the question, which line best answers to the public good. We should like to see one line that could not be "bought off." At earliest moment we shall visit and speak of her.

Interesting to Newspaper Publishers.

ONE of the most remarkable instances of fidelity to one's calling is shown in the case of the Editor of the Portsmouth (N. H.) Journal, Chas. W. Brewster, Esq. In the issue of that paper of Feb. 27, he gives a sketch of his *forty years'* experience in connection with that journal, beginning as a *typo* and rising to a post of honor, seldom acceded to an editor—that of steadily pursuing his profession in one office for so long a period:

Forty Years in a Printing Office.—In comparison with the common term of human life, this is a long period to be in the constant and regular exercise of one employment. The recurrence of the 16th of February, last week, reminds us that on that day terminated forty years since we made our entrance into this office to learn the art and mystery of printing. And from the morning of Feb. 16th, 1818, to the present time, have we been a stationary fixture—never for a day in all that time having been disconnected from the office; but as apprentice for six years, journeyman for one year, and for thirty-three years proprietor, we have gone on hand and hand with the establishment. Once in the time we were absent a month from sickness; but on no other occasion have we ever been absent more than ten days at a time. It will be seen that the regular yearly volume in the head of our paper is LXIX. When we entered the office, it stood thus: Vol. XXIX. From 1821 (when the Portsmouth Oracle took the name of the Portsmouth Journal) to the present time, have we personally made up the paper, and with our own fingers made the annual changes in these Roman characters. Long acquaintance with types has not, by daily familiarity, taken from us that admiration of their beautiful mechanism, so square, so equal in hight, standing so regularly in lines, which was excited in us the first day we handled them.

But however thick personal in-door recollections may cluster around, there are others which arise from the out-door progress of our country and the world, while we have been made a printing office medium between the people and the events.

Forty years ago, the States of our Union numbered twenty—of which Indiana and Mississippi had been but a year in the sisterhood. We have set the record of the successive admission of Illinois, Alabama, Maine, Missouri, Arkansas, Michigan, Florida, Texas, Iowa, Wisconsin, and California. The population of our country was then about nine millions—it is now about three times as great. The town of Boston then contained only 40,000 inhabitants—the city now contains 150,000. Philadelphia has increased from 100,000 to 450,000, and New York from 120,000 to 600,000. New Orleans from 25,000 to 125,000. Portland, in the District of Maine, had one-third of its present population—and many cities of 20,000 now, were then scarcely known as villages.

This progress of population, however, is small, when compared with the progress of the newspaper press of the country. In the forty years since we entered the printing office, more improvement has been made in the mechanical progress of printing than from the day of its discovery up to 1818. Until within three or four years of the latter date, no power press had been invented, and the London papers of large editions had to put up two sets of types to make a seasonable issue. No other than common hand presses were in use in the United States for printing newspapers until after 1818, and newspapers were consequently small—none in the country being so large as the Portsmouth Journal now is. The Boston Daily Advertiser was then a small sheet and an experiment of recent date. The three semi-weekly Boston papers, the Palladium, Centinel, and Chronicle, together, made an issue for each day for many years. The Daily Advertiser, and Evening Gazette are the only Boston papers now published which date back of 1818. While fatality has marked so many of the Boston papers, the Salem Register, and Salem Gazette, papers which have ever kept on the even tenor of their ways, have continued to thrive, a blessing to the community where they circulate. The same may be said of that valuable paper, the Newburyport Herald.

Since 1818, the speed of printing has so increased, that, in the hour which then produced only 240 impressions, 24,000 can now be made; or 100 to 1! The real issue of the newspaper press has increased to about the same proportion.

The Keene Sentinel, the Amherst Cabinet, the Concord Patriot, the New Hampshire Gazette, and the Portsmouth Journal, are all of the thirty-five living papers in this State published previous to 1818. Twelve other papers had expired in Portsmouth previous to that time, and a much larger number in the other towns in the State.

Experience has fully shown, that the independence of the press, and that independence exerted for the greatest good of the greatest number, is the only guarantee of its usefulness and consequent permanency. In many instances, newspaper establishments have been owned by cliques of party leaders, and the course of editors been dictated and controlled by a power out of sight, whose interest must be promoted, whether the public have light or darkness spread before them. With the ownership of a press in the hands of those who are blind to every idea but individual and party interest, how can that independence be sustained which should allow an editor to speak the truth according to his personal convictions?

There are some negative as well as positive qualities which should give character to a newspaper. Its value is not wholly in what it contains, but also in the non-appearance of what is injurious to the morals of its readers. In the family circle, where the newspaper is a text-book, and its contents go far in giving touches to the minds of the household, there is an air of sacred purity which should not be invaded by the periodical press. In our view, no newspaper is justified in the use of profanity, however its suppression may blunt the keenest wit. Nor in that circle should those court trials which give the detail of sensual crime, ever find place. The object of the editor should be to present that class of reading which ministers to correct principles of government and to the improvement of the better feelings of our nature. How far we have been successful in carrying out our views, our numerous readers for a generation back must form their own opinions. While our aim has been to present the truth, not only as serving our readers, but also a higher power, we may at times have erred in judgment; but have never deemed it unmanly to make corrections when we have discovered our errors.

[In setting up, Colonel, these pleasing and instructive reminiscences of one who first placed a *stick* and *rule* in my boyish hands, and taught me the *case*, on one beautiful September afternoon, more than fourteen years ago, in the Portsmouth Journal office, I can see the same kind smile of approbation, in memory's vision, which greeted me as I brought to him the first *stickfull* of matter I had ever set. Throughout my apprenticeship with him he was an unvarying friend, and patient teacher, and I oft recur to the years passed in his office as the happiest as well as the best of my life. Printers who learned their art under him can be found all over the world, and none of them can hear the name of Charles W. Brewster, without emotions of pleasure. And the sons and daughters of good old Portsmouth, in every land under the sun where they can see a Portsmouth Journal, treat it as a dear friend from home, and read its columns, even through the advertisements, with intense interest. That Mr. B. may be able to render the Journal as interesting, instructive and prosperous for forty years to come, as it has been for the last forty years, is the hearty wish of—*Typo.*]

The Great Steamer Excitement.

The course our journal has always taken in relation to the importance of having a line of steamers owned and controlled by *Californians*, will convince all that we are true to California's interests; but we call attention to very important facts, revealed by late transactions. Look at all *pretended* oppositions; they prate about the people, the dear people, and the people's good—but offer them money, and they are easily bought off. Look at the recent case of C. K. Garrison & Co. and Vanderbilt—who can believe they love California or her interests above their own? Even the great spouter on the Plaza admits he could be bought for one thousand dollars. It has been so always—on the Sacramento, the San Joaquin, the ocean; offer the opposition money, they yield. And it will always be so. The opposition work for money, and the old lines only do the same.

When the CITIZENS of California shall awake to their true interests, and establish a line of ocean steamers of their own—as it could be done—then it will succeed, and never till then. Talk of monopolies—what is a monopoly? The man who has $10,000 to loan on a "hard" steamer day, if he has the only money in market, is a monopolist; he has the only money to let, and he gets his own price. The owners of houses and stores, when they are scarce and wanted, get their own price—they too are monopolists; and the Pacific Mail Steamship Company have the only steamers, they have the same right. While we labor and strive to aid in the right way, let us look at all sides, and be just. Who does not know that high rates of interest and high rents are as great evils, or greater, than any monopolies else; but how can these be remedied? While so much blame is thrown upon the Pacific Mail Company or the Navigation Company, who ever tells of the *good* they have done. Surely they have done some, and as it is our province always to find the bright side, we know of much to praise as well as much to regret.

If we speak of the Pacific Mail Company, who that remembers Capt. Knight, the former agent of this line, cannot recall a thousand instances of noble generosity, humanity, and kindness; who dared ever assail his integrity or nobleness of character? No appeal of humanity was ever made to him in vain. We ourselves can recount many acts of his humanity, and some for California interests, that were enough to give him the crown of nobility as a man. We *know* this, yet we never asked a favor at his hands. The present efficient agents, Messrs. Forbes & Babcock, are the lawful agents of a large Company; who can assail these gentlemen? They are placed here to perform a duty as *trustees;* shall they violate that trust to please a man or any set of men? Yet who can say they ever required aid in the cause of humanity, or demanded a favor that was in their power to bestow, and were refused? Did they not extend every facility for inquiring into their affairs by committees of mechanics and shipbuilders, and of the Legislature? Did these committees condemn, or did they exonerate? Let truth answer.

We are no friend of monopolies, or of any company. We are for justice—we love to speak of the *good* men do, and to encourage it. We will not undermine and pull down or crush the little germ of good because we do not *know* it is good, but fear it is evil. Every reader of the FARMER knows we are constantly urging the establishing of a new line of ocean steamers. This should be done, for we have a right to do it, and it is our duty to do it; but for heaven's sake do not let us pull off the planks of the old bridge, or saw off the piles that support it, until we have a better. For all the good the Pacific Mail Company have done, bless them for that. If they have done evil, go to work and remedy it, and not keep prating about it. Words won't build steamships.

And what good have the Navigation Coompany done on the Sacramento? Can any good be said of them? Where are the thousands of poor that have been carried up and down free of charge? (we don't mean editors—they are poor enough, the Lord knows); how many have been freely fed? how many purses have been made up for the sick and suffering, the blind, lame, and halt—the widowed and the orphan one? We, as old travelers, could tell of thousands, and these too planned by the officers of this same terrible monopoly. Have they done no good? Again: what is the price of passage and frieght now as compared with the past? Of late the frieght has been voluntarily reduced from $10 to $3 per ton, and the passage also much reduced. And what have their opponents done? Have they better steamers, more skillful or more courteous commanders and officers? Can you travel with more speed or safety upon an opposition?

When we see an opposition line upon the ocean or elsewhere that shall give conclusive evidence they love the people better than their own pockets, we will believe them, and not till then. We feel just as we talk, though we could say a word on the other side.

The Wool Crop of California.

This article—a great staple—is fast increasing in quantity and quality. A few years since, and scarce a bag of fine wool was shipped hence. The small quantity sent abroad was worth 8, 10, and 12½ cents per pound. Now wool goes forward in large quantities, and is made of great value in our exchange.

We have visited the warehouse of L. Haskell, Esq., on Davis street, who is now the largest exporter, and there can be seen wool of all grades, from the coarse Mexican to the fine Merino fleece, from wool valued at 10 cents to that which commands 40 and 50 cents per pound. The last year Mr. Haskell shipped from San Francisco 500,000 pounds, and the increase of the article, the present year, will enable him to send abroad 1,000,000 pounds. Mr. H. purchases wool pelts, hides, and wool, and all who have such articles can always find a purchaser at this warehouse.

As we note this increase in the wool trade, we cannot help referring to the great wool market of Australia. In 1834, *no* wool was shipped from thence: in twenty years afterwards—1854—9000 tuns were shipped, and of high grades. Just as rapid, even more so, will be the wool trade of California.

An Offer to California Writers.

[Our long advocacy of home products prompts us to give place to the following generous offer of the proprietors of the Atheneum. We feel complimented, we confess, in seeing our name as one of the judges, although its appearance in print was the first hint we had of it. Had it been a gentlemen that had thus made use of our name, we can't tell what the consequences would have been; but as it is a *lady*—why, we must bear our honors as meekly as we can. Another noble offer was made in the Atheneum, to which we referred last week:]

$100 IN PREMIUMS.—We have placed in the hands of Wells, Fargo & Co., Bankers, the sum of One Hundred Dollars, which we offer to California writers, as follows: $50 for the best Original Poem; $50 for the best Essay on 'California Literature, and how to promote it."

It is required that the Poem shall consist of not less than fifty, nor more than one hundred lines. The Essay to comprise not less than seven nor more than ten closely written foolscap pages.

All manuscripts should be forwarded to the Editress of this paper, previous to April 25th. The decision to be made, and the prizes awarded, on May 1st. The name of the successful competitors alone to be published.

Judges.—We propose the following named gentlemen as a committee to judge of the merits of the several productions. If they decline acting, other gentlemen will be chosen: Mr. Brooks, or Mr. Foard, of the Golden Era; Mr. Lawrence, of the Wide West; Mr. Hutchings, of the California Magazine; Col. Warren, of the California Farmer.

All manuscripts which we may receive previous to May 25th, will on that day be submitted to the judges for their decision. The names of the competing writers will be carefully concealed from the judges until their decision is rendered. The manuscript of unsuccessful competitors will be returned to the authors, or if used, will be liberally paid for.

We earnestly invite all writers, both male and female, to compete for the above prizes, and thus aid in promoting the development of California talent.

THE ATHENEUM.—Number four of this admirable literary magazine appears this week, showing a marked increase of public favor. It contains an able vindication of the charge of plagiarism, which has been so ungenerously laid to the charge of the editress. This number contains valuable matter for all classes of readers; among these a handsome tribute to Sacramento. A poetic strain by the editress, entitled "Crucify him," will be acknowled of very high merit, and beautifully appropriate for the circumstances under which it was written. We cannot but believe this lady will find a large increase to her number of friends and patrons, by the severe criticism manifested toward her journal. It certainly has called into action a degree of spirit and energy possessed by but few of the female sex.

WHERE DO YOU PURCHASE YOUR GROCERIES? Do not fail to visit Fordham & Jennings.

☞ **Thanks.—**

FROM THE COLLEGIATE INSTITUTE:

Allow me to return our sincere thanks to the following gentlemen for favors to the Collegiate Institute at Benicia:

To Col J. L. L. F. Warren, editor of the California Farmer, for a case of Agricultural Books, presented as the nucleus of an Agricultural Library.

To Major McDaniels, for valuable Public Documents.

To Hon. Charles Sumner, for package of Public Documents.

To T. R. Mosely, Esq., Wells, Fargo & Co.'s Messenger to Stockton, for a full collection of samples of the various strata passed through in boring the Artesian Well at Stockton.

12-2 C. J. FLATT, Principal.

KOHLER'S NEW MUSIC.—We have received from this energetic publisher the following new music:

My Mary A' Roon, a ballad written by Desmond Ryan, Esq., the music by Clement White. This is an admirable ballad, and should be widely known.

Flowers of the Guadaloupe, a waltz composed and arranged by G. E. St. Clair.

Also: "I'm but a simple Peasant Maid;" "Keep Thy Heart for Me;" "Though Fortune Darkly o'er Me Frowns;" "Her Gentle Voice Expressed no Guile;" "'Twas Rank and Fame that Tempted Me." These are all excellent and new.

A Rare Chance for Farming!!

SHERIFF'S SALE, TO FORECLOSE A MORTGAGE.

A RANCH

WIL BE SOLD, on the —— day of ——, in Contra Costa county, near "Marsh's Landing" on the San Joaquin River,

Formerly known as *"FULLER'S RANCH,"* situated on the banks of said river; six feet above the highest rise of water; contains about 350 acres, nearly all cultivated, and splendid Crops of Wheat, Barley, Rye, Indian-corn and Broom-corn, Vegetables, Fruit Trees (over 1000) of every variety, with many varieties of Grapes—nearly all in bearing condition. The whole Farm inclosed with a good picket-fence. Together with Dwelling-house, Farm-house, Store, Blacksmith-shop, Barns, Stables, Corrals, and other buildings.

Said Ranch has been under cultivation for the last five years, and is well calculated for raising early vegetables for market; including both wet and dry land; many parts of the upland heavily timbered; the dry land very warm and early; about 50 acres meadow, a part of which is under cultivation, and can be all irrigated or overflown by hoisting a gate, and drained by closing.

The location is altogether one of the pleasantest, healthiest, and most desirable situations in the country, either for Farming or Stock Raising, being well watered and a large range of unoccupied land adjoining it.

Titles perfectly satisfactory. Day of sale will be given next week.

Address, or inquire at Office California Farmer.

[Sac. Union, and Stockton Republican, please copy, and send bill to this office.]

SPECIAL NOTICES.

☞ **THORBURN'S Preliminary Wholesale** CATALOGUE OF VEGETABLE SEEDS, *of the present year's growth*, will be published on the 20TH JULY, and will be mailed to Dealers and others requiring Seeds in quantities, inclosing stamps for return postage.

J. M. THORBURN & CO.,
19-tf 15 John street, New York.

☞ **Wigs! Wigs!! Wigs!!!** — BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.

v8-13 1y 233 Broadway, New York.

☞ **A. W. FABER'S LEAD PENCILS.**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not failed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York."

v9-1 6m E. FABER, Sole Agent
133 William street, New York.

☞ **Farm Stock.**—Having completed our arrangements for the importation of choice stock, we are now prepared to receive orders for any of the following breeds, and would call the attention of those in want, to our unsurpassed facilities for the importation and improvement of the choicest stock:

Thorough-bred Devon Cattle,		Webb Southdown Sheep.	
Shorthorns	do	French Merino	do
Thorough-bred Ayrshire	do	Spanish	do
Suffolk and Essex Pigs.		Cotswold	do
		Chester White Hogs.	

Fancy Fowls—all the best varieties.

All communications addressed to us will receive immediate attention, and we shall be happy to correspond with any and all upon the subject. Address

2 WARREN & CO., Cal. Farmer Office.

☞ REGISTRY OF STOCK.—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.

☞ **A Syllogism:—**

PROPOSITION 1st.

Every Lady and Gentleman desires a beautiful head of Hair.

PROPOSITION 2d.

The use of LYON'S KATHAIRON, will, without fail, produce such an one.

THEREFORE:

Every Lady and Gentleman will, of course, immediately commence using Lyon's Kathairon. All pronounce the Kathairon to be the purest and most agreeable preparation for the Hair ever made.

Its immense sale—nearly 1,000,000 bottles per year—attests its universal popularity. Sold everywhere for 25 cents per bottle.

HOTEL

INTERNATIONAL.

San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present
Lessee and Managers,

A. S. HALEY,

JNO. J. HALEY and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

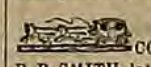
FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most

DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen, during their sojourn in this city.



THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, LESSEE.

ASSISTED BY: JOHN J. HALEY, and
E. R. ROBINSON, formerly of the New York Hotel.

MUSIC OF EARTH.

There is music, merry music,
Ringing through the forest wild,
Gushing free and full of gladness—
'Tis the language of a child!
Where the velvet moss is greenest,
Where the blue-eyed violets bloom,
Where the soft Spring air is laden
With a wealth of rich perfume,
He is sporting in the sunshine,
With his young heart full of glee,
And his merry laugh is ringing,
Ringing ever joyously!

There is music, happy music,
Echoed softly through the grove,
Breathing gently of affection—
'Tis the maiden's song of love!
Blushing rose and weeping lily
Lend their beauty to her bower,
But with mingled tears and blushes,
She is still the fairest flower!
She is dreaming of the absent,
Of his parting kiss and smile,
And her happy song is gushing,
Gushing gladly all the while!

There is music, solemn music,
Stealing through the church aisles dim,
Sweeping high in lofty echoes,
'Tis the sacred bridal hymn!
Round the altar they are gathered,
Where the bridegroom and the bride
Breathe their earnest vows in whispers,
Lowly kneeling side by side.
O, the air is pure and holy,
And along the church aisles dim,
Softly stealing, richly rolling,
Peals the sacred bridal hymn!

There is music, mournful music,
Wailing o'er the turf's low bed,
Sounds of deep, heart-rending anguish,
'Tis the requiem for the dead!
'Neath the shadow of the cypress,
Where the drooping hyacinths weep,
They have laid the loved and lovely
In an early grave to sleep!
There are sighs of crushing sorrows,
Bitter tears are vainly shed,
Mournful voices still are wailing,
Wildly wailing o'er the dead!

[Louisville Journal.

Letter from Mrs. Eliza W. Farnham.

Everything from this distinguished friend of woman will be read with interest and sympathetic feeling. Few ladies of the present day have labored with more true zeal and interest to ameliorate the condition of the laboring class of women, and those who, by reason of misfortune, need aid, than Mrs. Eliza W. Farnham. Truly can she be classed among our noblest female philanthropists. By the last dates from the East, she has succeeded in forming a colony to go West, and the annexed letter affirms it. God speed her in her noble mission.

EDITORS. FARMER: I have been too hardly driven of late to have any opportunity for news gathering, which, in most instances, would be an essential duty of a correspondent of a remote journal; but if you and your readers will be patient, and give me another fortnight or month to forget my hurry and look about in, I will promise to tell you somewhat that may happen to be going on that is rare or good in this land of outside barbarians. But I will not undertake as much with regard to the commonplace or bad, for there is a deal of both; so much that Hercules himself, were he as fertile in the capacity of chronicler as G. P. R. J. is in that of novelist, and as powerful in handling the pen as he was in cleansing those places which would be no wonder in our day, would despair at the task. Let me therefore be excused.

I said I had no news, but there is a little bit of local information I can give you, which may interest some of your readers. Mr. Hog is on his winter travels at this time, and arrived in the city four days ago. As he is a gentleman who has a very numerous and respectable connection throughout the country, it is to be presumed that the family is not unrepresented in California, and that in relating a few incidents of his tour hither, I shall speak to some brothers, sisters, uncles, aunts, cousins, and friends of remoter degree, who will thank me for my pains. I am the better able to do this, because it was my inestimable privilege to share Mr. Hog's progress from the West hither.

He left Dunkirk with us at 3 a. m. of the coldest morning we have had this winter; mercury 18° to 24° below zero. Those important functionaries, the fire-boys, had either overslept themselves, or by some other means been happily oblivious all night of the fact that 3 o'clock is the coldest hour of the twenty-four, and that people who have been traveling and are very weary, are much more susceptible to cold than those who have just left warm beds or comfortable supper tables. When we entered the car that was to convey us, there was visible at the aperture of the stove door, a little flickering blaze, which waned by slow degrees into absolute blackness. The room was as if one had entered a dark cavern in the bowels of an iceberg. There were at first eight of us, shivering with high shoulders, our lips and feet as insensible as those which rest in the stirrups of the bronze statue at Union Square. Presently Mr. Hog bustled in, doubling our number at least, if not trebling it. He grunted, snorted, blew, snuffed, stamped, routed a poor little four-months infant from a seat near the fire, thereby cutting the mother off from any approach to the warmth which we trusted would come by and by, and so installed himself. Your humble correspondent had been seven days and six nights on the road, resting only twenty-four hours out of that time; had had fifty persons to take care of on the journey out; and what between continual travel, excessive cold, and floundering over snowy prairies in search of food for hungry women and children, had arrived at such a supreme state of indifference with regard to the affairs of time and sense that a whole regiment of Hogs could scarcely have invaded the kingdom of her deep tranquility. Thus at least she thought, smiling inwardly at the exercises of the animal. When the baby was routed, and its mother so banished to a back seat, some faint protest rose to this deponents lips; but the vocal organs having been reduced by the various exercises aforesaid, to a state of almost total incapacity, refused to deliver the same audibly, and silence was settling down upon us, silence and despair, when Mr. Hog, with a tremendous snort and shuffle, stood suddenly erect, drew a case bottle from his carpet-bag, and a silver goblet after it, which, partly filling, he sipped. Then he deliberated, consulted his huge gold watch, and concluding that time would permit, he left the car by the rear door, and entered the depot. He left the door open, doubtless to facilitate a hurried execution of his purpose, and thereat a stream of northwest frost poured in, extorting involuntary groans from each poor sufferer present. Your correspondent, enjoying the position nearest the offence, rose and closed the door, but had scarcely resumed her seat, when Mr. Hog having "imbibed," rushed hastily in, as the cars began to move, and took his seat, leaving the blast free ingress again. This was too much, and larynx or no larynx, one could not do less than speak.

"Did you intend to leave that door open, sir?" I croaked.

A noise between a growl and a snort was the only reply deigned to my inquiry. The goblet was carefully replaced, and then the porky biped walked aft and closed the door.

The cars were now in full motion, and we rolled on an hour or more, when, on opening my eyes, I saw Mr. Hog, spread to his utmost capacities on the seat adjacent to the stove. His carpet-bag occupied the one next it, and the poor freezing mother and baby were dozing and shivering on the third one. This also seemed a state of things to be corrected if possible, and your correspondent rose and addressed herself to the work. The mother said she was perishing, and I could well believe it, for at three feet from the stove you could scarcely feel it, though by this time it was glowing red in spots.

Touching Mr. Hog as delicately as would serve to rouse him from his slumbers, I asked if he would relinquish the seat of his carpet bag to the mother and child. He deliberated a moment, and said he would *if I would give him mine in place of it*. This I gently declined, explaining that if I could, with safety to my health, occupy a back seat, I should have given my own to the mother without asking for his.

"Well, then, I shall keep my own," said Mr. Hog, settling his carpet-bag again in its place, and subsiding into himself. He had not long remained there, however, when it seemed suddenly to occur to him that a cigar would enhance his comfort, and he proceeded to light one, defering to our presence only so far as to walk to the back end of the car, leaving his cane in his place on the second seat. But there we had him.

"Is that man to smoke here?" said I to the brakeman, who passed at the time.

"Pray, stop him," chimed in the mother, on the other side; and so Mr. Hog was compelled very reluctantly to give up his cigar. He resumed his seat, bringing an extra cushion forward wherewith to support and comfor his body, and proceeded with indescribable contortions of its porkerous bulk to endeavor to dispose it for sleep. Success or failure in this undertaking seemed to me to be of little moment, and I dozed again, leaving him in the full tide of experiment, and thinking, as I departed, that such a man ought to have a vehement snore to fill the circle of his vocal gifts. Of course he had it—a sort of double-toned performance, as if a pair of huge underground giants were at a duet. Mr. Hog was not a winning man awake and fully conscious of himself and his doings, but at the end of a half hour's nap I think we all felt disposed to admire him awake, as compared with the other condition.

Breakfast came, and here Mr. Hog was doubly himself. He ate and drank with something above a zest, rather more than a gusto; in fact, one might have said with an eagerness rarely seen but at the trough. When the day waxed warm and sunny, so that the fire, which was of course perseveringly kept up, became rather a nuisance than a comfort, Mr. Hog blandly turned to the mother and baby, and asked if they would like to exchange seats with him! And so the whole progress was a triumph of Mr. Hog's urbanity and delicacy and consideration for the comfort of his fellow travelers. What a paradise, we thought, Mrs. Hog must pass existence in! What a privilege to live and share life with such a soul, in such a body! We could only hope that she duly valued his privileges, and resolve, for the honor and comfort of the whole illustrious Hog family, to set forth, according to our feeble ability, what we had seen and enjoyed. And if I have discharged my part of this duty, I will take the thanks which I know are my due from the Hogs everywhere, and retire from the subject for the present.

In my last letter I said there had been no winter here, but since then the hoary old god has taken a turn this way for a few days. I was not thankful for his visit, being very willing to forget him if he would let me; but he does not seem disposed to have his old acquaintances cut him thus. The few days' pinching cold served to remind us forcibly how fearful would have been the suffering of the poor had it prevailed through the winter months. It is cheering to see, however, that our public calamities and wide-spread adversity have appealed to noble capacities and sympathies in the hearts of people who have never been suspected of entertaining such guests. There have been works of generosity and benevolence undertaken here this winter, which will make it as memorable to many as the suffering that has called them into being. Among lesser ones which I cannot enumerate, I must take space to make one known—that of Mr. John W. Farmer, of Ludlow street. Mr. Farmer is a plumber, a practical mechanic, who, by industry has accumulated a small fortune, and witnessing much suffering among the destitute poor, he conceived the idea of mitigating some of it by relieving their hunger once a day. He opened a dining-room, where people of all colors and conditions have free admission for one substantial meal each day. The fare consists of meat, bread, and vegetables; is very neatly served on clean tables, with clean dishes for every succession of partakers. There is plenty for all who come, and a great flag is stretched across the street from the building, bearing the inscription—

JOHN W. FARMER'S
FREE DINING SALOON,
Plenty for all, without Price.

Mr. Farmer has fed, on some days, a thousand persons—seldom less than six hundred; and he magnanimously refuses to be helped in his undertaking, bidding those who offer him assistance go and use their means elsewhere, to relieve the want which he cannot reach. Seeing such work, one feels that times of trial are not altogether unprofitable to the character of the people to whom they come. I believe that many men and women have found impulses of compasssion and tenderness in themselves this winter, which years of prosperity would never have convinced them of.

Our own Society, which has for its object, as you know, the helping of unemployed laboring women to homes in the West, has been very liberally aided by contributions which have come upon the solicitation of our general statements, and those of a few friends who have kindly volunteered to work for us. Between it and other efforts of a kindred character, nearly a thousand females have been sent from want and destitution here to plenty there. I accompanied a party of fifty, a few days ago, to Decatur, Illinois, and had not been two hours there till every one was in a comfortable temporary home or a place of service. Another larger party will go this week to Jacksonville, in the same State. The West needs good women, and receives them gladly when they come; and as we take great pains to assure ourselves of the character of those we send out, we find they are always welcomed. Would it not be a wise measure, Mr. FARMER, for California to look to this surplus of working women, and devise a plan for getting some of them herself? Your emigration movements seem all to have failed. Could not wisdom and earnestness enough be found among you to do something like this for your own good, and for that of those whom you would receive? There are thousands of noble young women working themselves suicidally here, who would rejoice in escaping their slavery for a condition where labor would be better paid; and who would gladly undertake to refund any reasonable cost of passage as soon as they could earn the means therefor. Would it not be possible to raise in our rich State the means by which a steamer could be chartered to take a company of well-selected, capable young women out of this city and the surrounding country? The trials of character there would not be so great and destructive as they were a few years ago, and many hundreds could go now whom one would not have dared to expose to the fierce tests of those early times. A great deal of this kind of work is being done for the poor classes in Europe of late. Emigration is largely encouraged and systematised, in many instances by great labor, for the good of the emigrant. Mr. Foster, a philanthropic English gentleman, is among the leading workers in this way, and thousands of worthy men and women, now living in comfortable homes in the West, which they would never have seen but for him, remember him daily with prayers and gratitude for his goodness to them. It seems to me it would not, or ought not, to be impossible to do something like this in our Golden State. Our subjects should be the first of their respective classes—energetic, pure, conscientious women, the most intelligent that could be found, and courageous enough to face, in the earnest resolve to help themselves honorably to a better lot than they can ever reach here, the little ridicule with which coarse and unfeeling people would be likely to attack them. There are plenty such here, and if any response worthy of notice were made from California, it would not be very difficult to find large numbers of them who would go thither on some such terms as I have named.

Before this is mailed I shall be on my way to Illinois again, with the next party to go from our Society. Yours truly, E. W. F.

NEW YORK, March 1, 1858.

Taking the Black Vail.

THE following thoughts came to us from our correspondent, who witnessed the ceremony of taking the "black vail," at Sacramento. We like such a spirit; through all this sketch runs a spirit of charity and tolerance that is most commendable. We admire the noble spirit of all who thus love to recognize and encourage the *good* we see in others; when this spirit shall more universally prevail, we shall see the dawn of a new and better day for our world:

"Teach me to feel another's woe,
And hide the faults I see;
That mercy I to others show,
That mercy show to me."

Taking the vail is a solemn and impressive ceremony. When the black vail was adjusted on the head, it gave me an unpleasant sensation; to be shut out from the world forever, never to hear the voice of love sound in the ear from manly lips again; no children of their own to rear and guide, vowed to celibacy forever, to have no household of their own—it looks like a dreary picture. But then, the thought immediately comes to your mind, what heroic women? what moral courage? to deprive themselves of all the joys of life. But there I am mistaken; there are many duties and many joys for those who are devoted to a life of single blessedness. *"The sweet Sister of Mercy,"* although deprived of wedlock, is not her mission a noble one? To educate the young, train them in the paths of virtue, holiness and truth. At the call of sickness she does not shrink, however malignant the disease. No, not her; like an angel of mercy she feels she is doing her duty, and for the cause of her holy religion; her trust is in one on high. With fearless step she enters the abode of misery and sickness; *there* is her post, till all danger is over. With skill and care she tends the sick one, who but for her perhaps, would be shunned and left alone to die. People dread malignant disease, and in such cases the selfish think only of themselves; the sick ones feel as if they were tended by a mother's holy care, and owe their life to her, and with many prayers call down blessings on her head; they know in the gratitude of the heart, but for her they would have died.

She hastens to the dying, and with many prayers commend their souls to God; with pious hands she closes the stranger's eyes with a mother's love and tenderness, for she thinks of the mother who in a far-off land shall never see her child again. She reaches out her hand to the poor outcast, bids them welcome; shelters them from the cold storm of life. Does she perform these kindly offices for gold? No! her vow forbids her to take money or reward; she toils for her religion, and at her death she hopes she may be pure enough to be received into the bosom of Holy Jesus. Oh, Sister of Mercy, whatever thy religion, thou art good, pure, and charitable; who should scorn thee because thou dost wear a dress peculiar to thyself? none but the ignorant and heedless. Sweet Sister of Mercy, the good and pure will love thee; although I am not a Catholic, and do not like some of the ceremonies in thy religion, yet I love thee for thy trusting devotion; thy meekness and unassuming gentleness; thy charitable heart and holy confidence; and if all my sex who are in high places would but imitate thee to sustain and uphold the falling steps of erring womanhood, soon how perfect would our sex become. There would be no more vice or sin, and all would mingle in harmony and peace. Let no one woman think that she is perfect, all have their faults, and to screen, oftentimes they condemn a sister who is purer far than themselves.

Women! you know not the evil that you do, with your malicious and uncharitable hearts; but if you will dissect the feelings of your hearts and thoughts you will find much to condemn, and see that others that you condemn are as perfect as yourselves; for if you are good and pure be thankful, for circumstances might have made you different. Woman, your mission is a noble one, to sweep error from the earth; to raise the fallen, either man or woman. Woman, this should be your task, like the sweet Sisters of Mercy, and in their last hours may they find hands as kind and gentle as their own to minister to their own wants.

MARY GLEN.

MAGAZINES, ETC.

THE
"HORTICULTURIST"
AND
Journal of Rural Art and Rural Taste.

(Commenced by the late celebrated A. J. DOWNING.)

Conducted by J. JAY SMITH, Editor of the North American Sylva.

THE increasing love of Rural Life has brought this popular publication into extended notice. Its success has been amply proved by a large addition of readers, and it is now offered to public patronage with confidence. It embraces in its scope of subjects everything pertaining to the country and country-pursuits, and aims to instruct while it amuses: it is, in short, as now conducted, a popular RURAL MAGAZINE, designed to interest all lovers of the Garden, the Country-house, the Cottage, no less than the Botanist, the admirer of the Green-house, Conservatory, Grape-house, Fruit Cultivator and Planter. Its correspondents are those who have long devoted their energies to these pursuits, and it is believed the number of these, and the information they impart, is greater than any other periodical can boast of either in Europe or America. Indeed, the work has become indispensable to the well-informed country-dweller, who, by a perusal of its varied pages, may maintain an acquaintance with all that is passing in the fruit-garden and orchard, the nursery, the villa, and with the beautiful in nature, whether it is improved by art or adorned by taste. In its Rural Magazine character it is addressed to all who love information, and it has thus become a welcome guest both in town and country. Its circulation now embraces the entire Union and Canada, and endeavors are constantly used to increase its attractions by a liberal outlay in embellishing it with costly engravings of fruit, dwellings, trees, and those numberless rustic adornments which make the individual home attractive.

A NEW VOLUME (13th year) commences with the January number for 1858: and it will be the constant aim to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style, each number containg 48 pages, embellished with a frontispiece and several other original and well-executed engravings. The volumes, taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature. As an advertising medium it has few superiors.

TERMS—Two Dollars a year; Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the Art. Price, $5.

J. L. POLHEMUS

DRUGGIST

J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE, *Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.*

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

MACHINES AND IMPLEMENTS.

TREADWELL & CO.,

IMPORTERS,

N. E. corner California and Battery streets,

SAN FRANCISCO,

have now landing, and will receive by every packet from New York and Boston, the most extensive assortment of

FARMING MACHINERY and Implements,

ever brought to this market, embracing all the

Latest Styles and Improvements,

which will be sold at lowest rates.....consisting in part of:

REAPERS:

MANNY'S COMBINED REAPER AND MOWER, WITH WOOD'S IMPROVEMENT..These justly celebrated Machines have become too well known in California to require more than a simple announcement where they can be had. We are sole agents for the Pacific coast, and none genuine elsewhere.

McCORMICK'S REAPER....This universally approved Reaper we keep constantly on hand, and are Agents of the Maker.

KETCHUM'S COMBINED REAPER AND MOWER....This Machine is now very popular—having been greatly improved the last two years.

BURRALL'S IMPROVED GRAIN REAPER. This Reaper cuts six feet, and is one of the strongest and most durable Machines in use.

SEYMOUR AND MORGAN'S REAPER; without the Raker attachment and all late improvements.

HUSSEY'S REAPER....Baltimore make.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.
BOGARDUS' 2, 4, and 6 horse do do.
FIELDS' 2, 4, and 6 do do do.
EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times. Extra points and parts can always be had.

This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.
Do. CUTTERS—Several sizes and kinds; hand and power.
HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.
GRANT'S GRAIN CRADLES—In cases of one dozen each.
Do. FAN MILLS. Also, the Boston Mill.
CORN SHELLERS—Hand and power.
Scythes and Snaiths—best steel Scythes and Lamson's Snaiths.
Hay and Barley Forks—2, 3, and 4 tine; of best makers.
Carpenter's Patent Wire spring-Tooth Horse Rakes, 10 to 15 feet long, with wheels, and seat for driver.
Ox Yokes and Bows—all sizes.
Churns—Thermometer, Dash, and Cylinder; also, Dog Powers for do.
Garden Barrows. Cauldrons and Furnaces. Cultivators.
Horse Hoes. Seed Sowers. Harrows.

Field and Garden Seeds

Of every description, *via* the Isthmus—this year's growth (1857).

Steam-Engines, 4 to 15 Horse Power.

Suitable for Ranches or Mining purposes.

Portable Flour Mills and Mill Stones—Noyes' make. All sizes, 16 inch to 4 feet.

Belting, Bolting Cloth and Packing—All kinds and sizes of the above.

HARDWARE—The best stock in the State.

MINING GOODS—All kinds in use.

COOPERS' AND TANNERS' TOOLS—Full assortment.

Baling Wire—Annealed.

Hay Rope—Best Manila.

Grindstones—Best dressed Nova Scotia; from 6 inches to 4 feet diameter, packed in casks in sawdust.

Wire Fencing—A neat article for inclosing Gardens, Heneries, &c. Also, for Ornamental Garden work, Grape and Rose Trellises.

Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c, &c.

[For the California Farmer.]

Grape Culture and Wine-making.

THE following very interesting letter from a valued correspondent at Boston, we lay before our readers in this number. It contains much worthy of consideration, yet we are bound to state *facts*. Much as we deplore the evils of intemperance, and we have seen the horrors of it in all countries, we are satisfied of *this fact*, the growing the Grape extensively in our State and the manufacture of Wine, will tend to do away the importation and use of a great portion of common and spurious liquors now imported and used here. We *do* believe that the free use of the grape, and of its pure juice and fresh wines, will tend to stay the evils of intemperance; and we wish our able correspondent would come here and see the fact verified. We know that in all wine countries intemperance makes the least headway. Our last visit to Paris, during some weeks, we never saw but *one* man drunk. The letter of our friend is a good one:

BOSTON, March 3d, 1858.

MESSRS. EDITORS: My business relations have placed me in the regular receipt of your paper (the CALIFORNIA FARMER), for about two and a half years past. I was from the first much pleased with its design, regarding it not only as a highly important local publication, but as a paper of peculiar interest to the friends of California on this side of the mountains.

The paper has been managed with great zeal and energy, tempered with good judgment. Whenever I read it, I am impressed with the true California spirit of enterprise manifested in its editorial remarks. It seems to be just *the* paper for California, and well deserves the encouragement and patronage it has received. I trust it will still continue to extend in favor, with all interested in the development of the agricultural powers and resources of that great country. I heartily wish your continued and increasing success, and hope every Californian head of a family will preserve every bound volumes of your paper, for his own reference, and for the benefit of his children of future generations, as a record of the progressive development of the agricultural history of California.

The term Agricultural is intended to express all that the word legitimately comprehends. I may therefore refer to the Grape, in particular, which seems of late to have engaged your attention. As an article of food, the Grape, both in a "moist and dried" state, is, and ever has been, an invaluable blessing to the animal kingdom; not only where the article is indigenous, but whenever and wherever it has been transferred to congenial latitudes. The matured Grape, as we receive it from the hand of nature, in a moist state, is an article of great luxury, and when prepared by partial drying for future use in the form of Raisins, is, with many, no less a luxury; and in either condition, serving with all, an important purpose as an article of food. For this purpose, viz: as an article of food, I would encourage the cultivation of the Grape, in its highest perfection attainable, and to an extent that will render the article accessible to the poorest as well as the richest of the community. Let there be such a profusion as to bring the article within the reach of all, even as the most common of our vegetables.

But my whole soul revolts at the most remote idea of encouraging the cultivation of the Grape in the United States, for the manufacturing of Wine, to be sold and used as a common drink or beverage, or for the purpose of distillation. I leave the question, as to the use of alcoholic liquors for strictly medicinal purposes, to each and every man's enlightened judgment and conscience, most sincerely hoping that we shall never become a Wine-manufacturing country.

I am aware of the efforts now being made to increase and extend the manufacture of Wine, in different portions of our country, even here at the East, and especially in several of the States in the Valley of the Mississippi, and of the sanguine expectations of many of your leading men, that California is destined to become a wine-growing State, and ere many years, that the article will stand as an important item among your commercial exports. Should such a result be realized, the article will necessarily be produced in such profusion as to be afforded at a price, enabling the exporter to compete, in other markets, with similar wines of the older wine-producing countries. That of course would bring the price of the article to a line that would place it within the reach of the masses of your population. Let the same profusion exist in the older States, and no prophet's ken would be required to anticipate the consequences. Admonished by my hoary locks, that I shall not behold with my natural vision, a state of things such as may be expected, yet I cannot but deplore it prospectively, as the greatest calamity that can befall my country. The flood of cheap intoxicating liquors that is constantly pouring from the distilleries of Grain at the West, and Molasses at the East, threatens to overwhelm our country in ruin. Let Wine from the Grape, be produced in similar abundance, and at equally low prices in proportion to its intoxicating power, with its peculiarly fascinating qualities, and it will speedily complete the work of our national ruin.

Such will inevitably be the result, unless our countrymen awake to a just appreciation of the danger, ere they become encircled within the folds of this terrific moral anaconda. Here, under Providence, is my only hope; and I am the more confident in this hope, from the fact that a revolution in public sentiment, in regard to the common use of intoxicating liquors, based upon moral and religious principles, is in the progress of development, and will, ere long, manifest itself in the determined and irresistible action of the philanthropic and religious, irrespective of denominational and sectarian distinctions. All, who acknowledge moral and religious obligations, will recognize the duty to abstain from the use of intoxicating liquors as a common beverage, and act accordingly. Nothing of human effort, short of this, will stay the terrible evil of intemperance, which now threatens our national existence.

Having occupied more space, perhaps, Messrs. Editors, than I ought to have done, I will close, with the hope that you will give this subject the prominence its importance demands.

Yours, truly, J. TOWNE.

Vance's Branch.—New Gallery.
AMBROTYPES, PHOTOGRAPHS,
Daguerreotypes and Melainotypes.
VANCE & CO.,
Corner of Third and J streets,
(Miller & Andrews' Building) SACRAMENTO,
HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons
The Genuine Patent Ambrotypes,
which, since their introduction at our establishment in San Francisco have gained such popularity.
We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.
We shall also take, as usual, our **Premium Daguerreotypes** and **Photographs**, as heretofore, in a manner
UNSURPASSED ANYWHERE.
Having three operators—one for each branch of the Art—With Mr. L. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee
PERFECT LIKENESSES
to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.
☞ We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,
9-3m Sacramento.

☞ **3000 Pounds California Tobacco**—We have samples of superior TOBACCO, raised in California, grown cultured correctly, by a person from Kentucky. It is the best lot ever raised in the State, and is worthy the notice of Cigar Makers. For sale at the FARMER office. 6

OIL!

FOR QUARTZ MILLS.

STANFORD BROTHERS,
PACIFIC OIL
AND
CAMPHENE WORKS,

INVITE attention to the following Certificates from GRASS VALLEY:

NEW-ENGLAND QUARTZ LEAD, Dec. 23, 1857.
W. LOUTZENHEISER, Agent of Stanford Brothers, Pacific Oil and Camphene Works:
Dear Sir: I have now given those Oils from Stanford Brothers, which I purchased from you, a fair trial, and find them the VERY BEST I have ever used.
Z. WHEELER, Superintendent.

ALISON RANCH, Dec. 25, 1857.
This is to certify, that we have been using the Oils from Stanford Brothers Pacific Oil and Camphene works, for a long time, and find them of a superior quality.
JOHN ANDERSON, First Engineer.

ALTA HILL, Jan. 12, 1858.
I hereby certify, that we are now using on our Machinery, Oils manufactured by Stanford Brothers' Pacific Oil and Camphene works, purchased at their Agency in Grass Valley, and have no hesitation in saying I believe them to be superior to any other manufactured in the State.
L. CARLSSEN, Sup't Alta Mining Co. No. 2.

The SPERM OIL furnished to these Mills is worthy the particular attention of ALL who use OILS for lubricating purposes.
Proprietors of Sawmills, Gristmills, Steamboats, and other Machinery, throughout the State, supplied in quantities to suit, and quality guaranteed in all cases.

WHEELER & WILSON
MANUFACTURING COMPANY'S
SEWING MACHINES.
343 Broadway, New York.
Agencies throughout the United States.
Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.
Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.
THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.
They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.
The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.
H. C. HAYDEN, AGENT,
9r-7 3m 157 Sacramento street (between Montgomery and Kearny)

JOHN D. ARTHUR,

CALIFORNIA FARMER OFFICE,
4 San Francisco.

SEED, PLANTS, &c.

The Concord Grape.

THE ORIGINATOR OF THIS NEW GRAPE offers for sale a fine stock, raised from the parent Vine. It has fully sustained its reputation as
The Best Grape for Out-door Culture
having survived the last two severe winters unharmed, where the Isabella, Catawba, and other vines were killed to the ground.
For Size, Beauty, Quality and Bearing,
it is unsurpassed. It is perfectly hardy, and has never been affected by rot or mildew, while it ripens from three to four weeks earlier than the Isabella, and two weeks earlier than the Diana, in the garden of the proprietor.
Fine, strong plants, at $1 50 each; $12 per dozen. Two years old, at $2 each. Three years old, extra, at $3 each. A liberal discount to clubs and the trade. Orders, with cash or good reference, promptly attended to. Address
2 3m E. W. BULL, Concord, Mass.

THE LAW OF NEWSPAPERS.
1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.
☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.
Postage of the Farmer.—The Postage of the FARMER to any part of the State is only 6¼ *cents per quarter, or 25 cents per year.* This is the lawful postage established by Congress and when more is exacted it is a violation o law

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOLUME IX. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, APRIL 16, 1858. NUMBER 14.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.

TERMS.—*Five* dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

☞ **Advertisements and Subscriptions must be paid for in Advance.**

[For the California Farmer.]

Are the Children of this World Wiser in their Generation than the Children of Light?

EDITORS FARMER: Let not your readers get fidgetty; I am not going to preach. Or if I do so, it shall be so discreetly, and (if I can do it) so philosophically, that they might not discover it, if I have the good sense not to prepossess their minds with that idea before I commence.

When we take a survey of Nature, we find one genus of plants approaching in their general features and characteristics more and more closely to another; so with animals; and so it is with everything. There is not that broad line of demarcation to be met with anywhere which we may have been inclined to suppose. Even plants and animals viewed collectively as two great classes, approximate to an extent which, until inquired into, seems as incredible, as on better investigation their exact boundaries seem indefinable. We make discoveries in the plans and arrangements of the Deity which we did not anticipate. We proceed in our investigations, and the further we do so we find our first discoveries more and more corroborated by additional proof, both in animated and inanimate creation. Let us direct our attention more especially to the former. From the plant-like zoöphyte to man himself we find nothing but a long ladder with many steps, one above the other, beginning with life so little more than vegetable as to be scarcely perceptible, up to a Newton, an Archimedes, a Franklin, or a Watt.

Shall we stop here and investigate no further? Let us now take men in every-day life, as we find them. We find one class of men who seem to be mere animals, obeying their natural impulses, and apparently stimulated by no higher motives than the gratification of their animal propensities. We find another of an entirely different character, who seem to be almost of another race, so little value do they set on those gratifications which to the others are the *summum bonum* of human happiness. Why is this?

Do not reply as if you had learned the words by rote from some orthodox catechism—they have been converted. We can discover, without the aid of gospel truth to assist us, that there is a vast difference between the one class, as a class, and the other, whether they gradually approach each other at the boundaries or not. We want a more philosophical answer. We want to have the human soul so anatomized, that we may be able to perceive how it is that while one feels so much gratification in mere animal enjoyment, another is so overpoweringly actuated by intellectual and moral considerations, as to be not only happy with a modified measure of the former, but even happier than the other, no matter how fully he succeeds in attaining the grand object of his pursuits and ambition.

We believe we have so far discovered the ideas by which the Divine Mind was actuated, in the creation of animal and vegetable life on our globe. Let us pursue our inquiries on the basis of those truths, which we have so far been enabled to ascertain. At the utmost boundary of seemingly distinct arrangements, we find the last links of one chain assuming the features of another, and the first of the other retaining some of the former. In animated creation we find man at one boundary. But, as in the case of subordinate classes, we find him possessed of qualities which, according to the analogies of the rest of natural existences, as they are only found in a very small degree except in man among us, may reasonably be supposed to be indicative of a separate order of created intelligences, as superior to animals as a class, as animals are to plants. On this hypothesis he forms the connecting link between a higher class of beings and animals, and doing so possesses partly the nature of both. In other words, he is half-animal, half-god. The idea of setting him down as simply the highest of animals, gets every day of weaker authority, as we direct our attention, more attentively, to how many of his noblest powers of mind are only of minor importance in the ordinary affairs of life. Besides, it conflicts with the entire system of arrangements having one class merging into another, which, so far as we have been able to trace it, appears to have been a primary idea of the Creator, universally adopted.

Admit that we are of this compound character, which I think it would be silly to dispute, and we begin to perceive why it is that one man, following the bent of those merely animal propensities, which as the connecting link between animals and beings of a higher class he possesses, is little more than a mere animal—while another, following the higher impulses of his nature which he has in common with the class immediately above him, becomes so assimilated to that class as to be almost a different being. We are cognizant of the fact; we begin to conjecture that we can account for it.

I shall hold myself excusable from adverting to what arrangements, different from those which we now have, existed, or were proper to co-exist with man in a superior state. Let us confine ourselves to man as he is, and things as they are.

Man—this creature of compound qualities, and, as we have reason to believe, the connecting link between mere animals and beings of a superior order—is so circumstanced, that while at first he acts as a mere animal, he gradually acquires proportionately less desire of animal gratification, and more of moral and intellectual enjoyment; and the natural arrangements by which he does so appear so beautifully contrived, that we are led to conclude that the Creator meant that such should be the case. Some have suggested that a state of freedom from exertion, with the earth producing abundance of food for man without any necessity on his part to cultivate it, would be a superior state of things to that which we now have, no matter how ignorant and uncivilized the condition of those who were so circumstanced. We shall be better able to say how far this would be the case, by examining how our present condition, which is almost the opposite, operates. In a state of nature, where the productions of the soil are abundant, men are everywhere found to be more or less uncivilized. By and by, on their increasing in numbers, they find it necessary to have recourse to ingenuity, to increase in a similar ratio those natural productions. Necessity becomes with them the mother of inventions. Their intellectual powers, which have been remaining in a state of comparative inactivity, are called upon to minister further aid. Machinery supplies the place of mere physical strength. One invention leads on to another. The country grows in importance. The people become not only more intelligent, but, from the necessity of acting in conjunction, more orderly. If the animal propensities of their nature do not get weakened, they at least have a proportionately less influence, and seem to do so. From being the chief motive to action, they turn out so inferior to others, now brought into play, that they are thrown completely into the shade—just as ordinary-sized vessels are by the great Leviathan; which as she lay on the stocks, did not, it is said, appear as large as she really was, the effect being that other vessels looked remarkably small. It may be so with the passions among civilized men. They may be as strong as when the race was in a state of barbarism; but I much doubt it. "The hand of little employment has" not only "the more delicate feeling," but is also weaker, and possessed of less physical endurance. The analogies of Nature seldom mislead us. We have reason to suppose that when less allowed to interfere, the animal propensities lose their original force, and like weeds among an overtopping crop of useful plants, get nearly choked out, or so subdued as to be comparatively harmless; and that thus, by the mere progress of events, so well is the machinery of Nature constructed, the barbarian becomes a civilized man, and from being a rude and obnoxious savage, a useful member of society.

If study, and thought, and investigation, tend materially to promote civilization, and the mastery of our more doubtful affections by the purer promptings of the soul, when directed to those objects which minister to our immediate wants, we do not require to be informed that they must do so to a much greater extent, when applied to the investigation of Nature, for the express purpose of ascertaining the attributes of her Divine Creator, and the operation of those laws to which he has been pleased to subject her. The study of Nature so pursued belongs properly to theology. But it is nevertheless fraught with lessons of much practical importance to the mere man of the world. It is useless to sneer at such studies as only fit for clergymen. The machinery of Nature has been so nicely put together, and is so abundant in contrivances to effect special objects, as to call for the attention of practical philosophers and mechanics. Then, the compensations for provisions generally made, but in some instances wanting, are so invariable, or if not supplied the reasons for the omission are so obvious that we can discover the whole scope of their design and its execution, as quickly as they are presented to the mind. More than this, those contrivances and compensations may be so easily taken advantage of, for different objects, that it seems silly in the extreme to let clergymen enjoy a monopoly of the valuable information which such studies afford.

I shall, next week, bring before the notice o the farmers of California a natural compensation, directly ministering to their especial relief.

AGRICOLA.

MILLERTON, April 2d, 1858.

Natural Arches.

WE present below designs for beautifying our gardens and homesteads. Nowhere in the world

can be found a climate more congenial, where art can join with nature and make her subservient to man's comfort and happiness; and nowhere on earth is it more easy to labor to beautify home.

Almost every tree, shrub, and vine are under the control of man, and "just as the twig is bent,

the tree 's inclined;" and, if attention will be paid to the character of the different trees and vines, they can be united, as here described, by *inarching*, so as to make a far better arch than any skillful carpenter could build, be he ever so tasteful. A great number of trees can be used for this

purpose, and the arches can be made heavy or light, according to the wants or taste of the builder. The Lime, Maple, Elm, Beech, Acacia, Willow, and the Rose can all be used for this purpose. The vine, fruit trees, and almost every species can be used in this country. By bringing the tops together, and halving and binding, in a brief time they will unite and become as one tree, and thence can be pruned to suit the space used, in the eye of the artist.

We shall speak again on this subject. The Horticulturist has done much, East, to urge the work of beautifying, and we hope to see this taste spread here.

The Frost—Rains.

Improving the Homestead—Kind Invitation—Value of the FARMER—Good example for other farmers.

WE present the following excellent practical letter, from our kind correspondent. We regret it could not appear before, but the crowd upon our columns prevented. Such letters will do good. We shall visit our kind friends this season. We truly thank all for their encouragement, and we rejoice in knowing our efforts are doing good. California is all right; she has true men on her hillsides, and in all her valleys:

PEACHVILLE, Stanislaus county, March 27, 1858.

EDITORS FARMER: Having noticed in my last FARMER, your request that orchardists and gardeners would send accounts of the cold weather and its effects, from the different localities, and believing that you have no regular correspondent from this immediate vicinity, I will comply with your request so far as my knowledge or information extends.

For the last two weeks we have had a succession of high winds, and uncommonly cold weather for the season; not much frost, in consequence of the dryness of the earth, but ice made frequently, sometimes one-fourth of an inch thick, and the effect on the fruit, particularly peaches, apricots and cherries, was very disastrous, but did not kill the entire crop even of those fruits; while apples, pears, quinces, etc., being a little later, suffered much less from the cold. Such is the case with my orchard, and those of my neighbors, as far as I can learn. Farming is much more extensively carried on here this season, than it was ever before. Farmers have worked with spirit and energy, notwithstanding that great drawback (the uncertainty of our land titles); yes, farmers have gone to work to make their homes comfortable, seeming to have faith that they will yet be able to get a good title to their land, and dying leave it a home for their children. Large willow bottoms, that were almost impenetrable by a grizzly bear, have been cut down and uprooted by the indefatigable industry of the settler, and now the land, instead of being incumbered with "the bramble and brush," as it was a very short time since, is covered with beautiful young orchards, luxuriant vegetables, or fields of waving corn, that would make a man from *Pike county*, or my own native *Tar State*, stand and smile, in wonder and admiration, at the magic-like change that has been made. Even the plain, that a few years ago was considered a valueless waste, has been fenced, cultivated, and really "blossoms like the rose." I have witnessed the different changes as they have been made since '49, and they have been so great and so sudden, that it scarcely seems reality.

The grain crop here has suffered for rain, but we now have a fine season. We had a gentle rain all last night, and until twelve o'clock today, and I think the prospect is fair for a good crop.

We all (for my neighbors *read* the FARMER), regretted very much that you could not, or did not call to see us on your way to or from Mariposa. Let me assure you that if you ever do make us a visit you will receive a cordial backwoods welcome. We, the farmers, are a rough clad, rough-fisted set of *hombres*, but we are *all* your friends; we feel that our interests are not cared for as they should be, even by our Legislature, but we know that you through your valuable paper are ever ready to advocate our cause, and to facilitate our laudable undertakings. We are not a moneyed class of men, but you may be assured, that as our prosperity increases, your list of subscribers will be lengthened. Wherever your paper has been read, it has done great good. Go where you may through the country, and you will see some improvement that has been made by reading the FARMER.

I have drawn this epistle out much longer than I anticipated, when I commenced it. It really is not written for publication. I hope you will accept it in the spirit in which it is written, of friendship. Although not personally acquainted with you, I feel like I know you, and after complying with your request, I feel it my duty to acknowledge my appreciation of your untiring endeavors to promote the general good.

Very respectfully, your obd't servant,

JAMES BURNEY.

Agriculture in Shasta County.

Improved system of farming—Increased quantity of grain planted—Chances for idle men to make money at farming—The discontented becoming happy—California the place to live in—Homestead burnt—Crops destroyed—Courage in misfortune—The right way to overcome difficulties—Success in raising the Sugar-cane—Industry brings its own reward.

THE following excellent letter was mislaid, but we now publish it, as it is worthy a careful reading by the idle, discontented, or despairing, and may encourage them; all others will be sure to approve the sentiments of our correspondent. These are the men to build up our State:

HORSETOWN, Shasta county, Cal., March 15, 1858.

MESSRS. EDITORS: As it seems to be so seldom that any now communicate to you, from this locality, through the columns of your valuable paper, I have concluded to write a few lines, thinking that you might like to hear from this part of the State. As regards the farming business in this section, everything looks very favorable for good crops, the coming season, and there has been a much larger quantity of grain sown here, this year, than ever, and it has been much better put into the ground than ever before. The farmers are taking a great deal more interest in plowing, and are working their land better, here, than they did two or three years ago. They have found out that they have lost a great many thousand dollars by not doing it before. Farming is not carried on so extensively here as it is below, in the Sacramento valley; but there are some that have as high as six or eight hundred acres of wheat and barley, this season. I think the price of wheat will be very much reduced here, by next fall; it is now worth from six to eight cents per pound.

It is getting quite dry here, and a good shower of rain would help both the farmers and miners very much. There are thousands of acres of the very best kind of land, here, lying idle for the want of men to come and work it. I think there are a great many men, with families, living in Sacramento and in San Francisco, who are in moderate circumstances there, who might come here, and, after they had got a little start, could do well. I have, in fact, seen men who came here one year ago, and, at that time, I venture to say, they were worth hardly enough to buy them a yoke of old broken-down work cattle and a plow, who are now getting to be very well off, and with a fair show of doubling their prospects every year.

It has been the practice here, with farmers as well as miners, to talk about leaving for the Atlantic States, just as soon as they could make a decent raise; but I seldom hear any such talk nowadays. The majority of them have made up their minds that California is just as good a country to live in as any under the sun, and they are now satisfied to stay here, and make themselves happy and contented with their lot. As for my own part, I have had rather hard luck, this season. My house burned down accidentally, while I was away, and well-nigh ruined me; my loss was considerable. I also lost all the grain that I had on hand at the time, my potatoes, and a great many garden seeds; but I am still working away, and will live in hope, if I die in despair.

The different kinds of wheat, and the choice kinds of garden seeds, which you sent me last spring, were all burned up. I had taken great pains in cultivating them, and saving the seeds, so that I might be able to distribute them around among my neighbor farmers; but I was sadly disappointed. The FARMER comes to me still, as regularly as ever; I would not be without it for considerable.

The sugar-cane seed that you sent me, last spring, I gave a fair trial, and it turned out well. It is a very prolific plant, and will grow upon any ground that corn will grow upon. Some grew to the hight of seventeen feet, and 1½ inches diameter. Some of it was made into sirup, and it was excellent. A neighbor and friend of mine, Mr. Clinton Johnson, who is a large farmer, and lives near Major Reading's place, has sent me some more seed, and I intend to give it a further trial, this season.

Inclosed find money for FARMER, and bill of seeds. Yours, D. H.

Important Letter on Immigration.

FRIEND WARREN: I receive regularly files of your paper, and nothing gives me more pleasure than perusing them. I also pass them around to my friends, who seem much pleased with them. I have now settled down in Somerville, Mass., three miles from Boston, taken an office in Boston, and the last two weeks, not having much to do, I am endeavoring to get the people, men and women, to emigrate to your State. I find thousands here who would go if they only had the oro. I am now trying to charter a good clipper ship and send her direct. I have invited all who want to go to put their names down. I offer those who have furniture, to advance them money enough to go. There is now an opposition line of steamers started, and the mail line, via Panama, have reduced their fair to $50 in the steerage; but women whom you want most cannot go that way. If the miners or any persons who want their wives and children to come out, will order them to come by our line, when we get it started, they will be helping California. Any miners or other persons who will pay over to our house in San Francisco $125, I will agree to send them a young and pretty female, who will make a good wife. Since I have opened my office, I have had letters from all parts of the country, from females, stating their age, who are honest but poor, and would gladly act as servants on the way for the sake of getting a passage. Is there not some way we can get a good class of that kind out there.

As for men of all trades, if any person will advance the same amount, I will send them men of any trade, machinists, blacksmiths, &c., who will work for the party who sends for them three, four, or six months for their board, upon arrival. It would be a deed of charity to get the poor fellows out there. I shall try to have the first ship of our line sail on the 1st of April next. If any person will advance $125, I will agree to send them good female servants, who will agree to stay with them one year for $10 per month. I think that will be an inducement for some to send here for their servants.

Our friend Randall is hard at work. Some gentlemen are trying to buy two or three steamships that have been running between here and England, the Washington, Herman and one other. Their object is to get two running first to help to pay for the two which they intend building.

I have held out to all those persons, male and female, who will go out under the care of the society, that the agents of the society will procure them plenty of places upon their arrival. And as we formerly talked, I want you to advertise for those persons who want men or women, through the mining towns or elsewhere, to write to you, or any one who may direct; or to my brother, if you think best, only he is so busy some other one whom you know could probably give it more attention. In their letters they had better state what occupation they are wanted for; if servants, how many in family, what price they will give, and for what length of time. In this way you might offer a number of places to each person.

Can you tell what has become of the California Emigration Society? When I left last June, parties were collecting one dollar per month, their object being to send to Messrs. Coleman & Co., New York, to help to pay some expenses which the company was subjected here, and also to pay for printing &c.; but Mr. Coleman says he has never received one cent as yet. Will you inquire into it?

I think if some plan like this can be carried out, we can next year give California a large emigration. At this end I ask no pay for myself; I will bear all my expenses; but if any one will lend us a hand, they can help the cause. I should think the miners might form a society and you head it, like this: let 125 in number pay one one dollar per month, and send that home monthly, and it will bring one female sure. They could increase their number to any amount, only each division of 125 would send for one per month.

I have written to my brother, who will help to carry out any views which you may suggest.

Your friend, S. C. BRADSHAW, JR.

The Sorgho of China, and the Sugar-Cane.

The following valuable article upon the "Sorgho" we have had translated for us by William Schleiden, Esq., that we might lay it before our readers, to show them the value of this wonderful cane. The article, as here translated, from the *Journal d'Agriculture Pratique*, shows conclusively that Sorgho Sucre, the variety we now have with us, is far better than the old varieties of the Sugar-cane. Mons. Dupeyrat has furnished valuable facts, and we trust more attention will be given to it, and more faith manifested for the Sorgho, as well for feed, as for sirup and sugar. The manner of culture, the system of using it as feed, and all else connected with it, as furnished in this article, should receive attention:

The different trials we have made, at the farming school of Beyrie (Landes), in the Sorgho, make us believe that the saccharine plant is almost identical with the Sugar-cane, and that it is as rich in sugar matter as the latter. The juice of Sorgho appears, besides, to be clearer, or rather to contain less mucilaginous parts, but its density (9° Baumé) is less than that of the Sugar-cane, which, without doubt, is caused by the climate of France, where the average temperature, in spring and autumn, is a little below that necessary to cultivate this plant.

100 kilogrammes of Sugar-cane juice, with a density of 9° B., containing 16 kilog. of pure sugar, and 84 k. of water, it will result that the Sorgho juice of the same density contains in 100 kilog. of green cane, viz:

62 k. 5 of juice extracted by a pressure of 9° B., water - - - - -	52.5
Sugar, or sugar matter in the juice -	10.0
Cane trash or pulp very moist, and waste,	37.5
Total - - - - - -	100.0

Now it has to be seen whether, by boiling at a low temperature, the Sorgho juice can as easily be crystalized as that of Sugar-cane. The whole question is inclosed in this point, and this equality of crystalization, in both juices, being proved, we shall show that the cultivation of Sorgho would be much more advantageous, by its yield, than the Sugar-cane, while five months are only required for the growth of the Sorgho, and eighteen months for the Sugar-cane, on lands not irrigated, and twelve months on lands which are well watered.

Rendition of Sugar per Hectare of both Plants.

1. Sugar-cane at the Island of la Reunion.

The first cut after eighteen months plantation, yields on an average for the whole island, per hectare..... (or 12 kilo. per square gaulette).	[kils. 5,000
The second and third cuts, after one and two years, or only a second cut which is made two years after the first, generally yields one half.....	2,500
Total for three years.....	7,500
Average per year and hectare.....	2,500

2. Sorgho of China, cultivated in France.

The yield at Beyrie was, in 1857, of one single cut, including the leaves and grain, per hectare.....	123,000
But this produce is rather a maximum, and not an average, and we believe that, under ordinary circumstances, it can only be taken at.....	100,000
Of which we have to deduct the leaves, grain, and top part of the plant, one meter long, as less sugared as the inferior part, and which is used besides for feeding. This deduction is certainly not equal to one-half of the whole, but, nevertheless, for the sake of avoiding all errors, shall consider it so: there would thus remain, of pure cane.....	50,000

Consequently, if 100 kilograms green stalks contain 10 kilog. of sugar matter, then 50,000 kilog. of cane will yield 5000 kilog. of sugar matter, equal to the produce of Sugar-cane, from the first cutting in the colonies; and, it must be kept in mind, that if the plantation in France is annually renewed, it will be nearly double the biennial produce of the colonies.

However, it may happen that experience shows that the Sorgho will resist the frosts of the south of France, as it is a perennial plant. In this case, it would necessarily lead to sow it in July to be cut, for green feeding, from September to November, before it gets seeds; this would secure its maturity, which, in certain years, might only be imperfectly reached, for want of sufficient heat. Then the stumps might be covered with straw dung, during the winter, which would make it grow more vigorously the next spring, and probably could be cut two months earlier, as if of one year's growth: because if the plant is sowed in May, like corn, it cannot come to complete ripeness in the south of France, till the end of October, a time of bad weather and difficult transportation.

Under this hypothesis, only one cutting would take place in two years for the extraction of sugar; and suppose that the produce should not be larger, then, after a five months growth, there would still be an average of 2500 kilog. per year and hectare of sugar, to wit, an equal produce to the Sugar-cane in the colonies, without reckoning the fodder of the first year, which is indispensible to secure the manure which this plant absolutely wants to further its growth.

CULTURE.

The sorgho is sowen on a properly prepared soil, well manured, almost in the manner of maize. The field is squared off in sections of 0m. 90 to 1m. each side, which will give 10 to 1200 feet per hectare; then three little grains (black and well ripened) are sown in each intersection of square lines, and if possible some more manure is added, consisting of either woolen rags, decomposed by chalk or acid, or guano mixed with ashes and coal, but avoiding that it enters in contact with the seed, which is first lightly covered with the foot, and then there remains but the weeding to be done, but this must be carefully attended to till the soil be covered with the plants. The weeding must be done on the surface, without tearing up the roots with a hoe, and without covering with earth the spurs and runners of the stalks. Afterwards the tufts are cleared with a knife, by cutting off all the shoots which are believed not to be able to reach the hight of the cane, of which only two, three, or four are preserved, according to the force of the stalk; and five months after the sowing the canes are cut, if the average warmth has been 20° centig. per day or 3000° per month, during the five months required for blackening and ripening the grain.

APPLICATION IN THE COLONIES.

It is important to state that the sowing of Sorgho is much cheaper than the plantation of Sugar-cane, particularly if the soil is prepared as in the island of Bourbon; and as soon as experience will show that the Sorgho juice will crystallize as easily as that of the Sugar-cane, the colonies should not hesitate to replace gradually the culture of the Cane by that of the Sorgho, the expense of which is less and the produce much larger.

The Sorgho will certainly grow much better in the colonies than in France. It will most likely permit two crops in one year on the same soil, and thus handle the plant the whole year, which would double the produce.

If the culture of the Chinese Sorgho opens a new field to the agriculture of southern France, it does not offer a less brilliant one to that of the colonies, which, thanks to the fecundity of their climate and the industry of their inhabitants, could always compete advantageously with Europe in the production of sugar. Nevertheless, that this competition be not too unequal, the colonies must not remain behind in agricultural and industrial progress; they must seriously consider the new position in which they are placed, and they should at once make trials in cultivating and manufacturing sugar from the Sorgho.

By these few words it may be seen that the advantages of this magnificent plant consist in the simplicity and economy of its culture, and particularly in its precocity, arriving at maturity in five months, which allows three crops for one of the Sugar-cane. Very interesting trials are to be made in this regard in the colonies, and even if the Sorgho juice should crystalize badly, yes, even if the first experiments should fail in producing a merchantable sugar, its culture would nevertheless be highly profitable to the colonies as the richest and most copious of all fodders known, resisting drought perfectly well, and does not cease to grow vigorously at an average heat of 20° centig. Thus the animals could be fed with Sorgho the whole year round in the colonies, while it is difficult to feed them by cultivating the Sugar-cane, except at the time of cutting, leaving seven months. Abundance of fodder is, everywhere and always, the best support of good agriculture, and the certain indication of great public prosperity.—[Aug. Dupeyrat, Director of the Farm-school of Agriculture at Landes.

Subsoil Irrigation.

"Subsoil Irrigation is a tried, lasting, and substantial application of art," says the Cottage Gardener, "in perfect unison with nature, in the shape of a system of cultivation which, in connection with agriculture, by means of which the great labor attached to watering gardens, may be almost entirely dispensed with." If not too expensive, says the Horticulturist, we agree with the writer, and give his *modus operandi* as follows:

"In the formation of beds on this system, it will be necessary in the first place to 'dig out the earth from one to two feet deep, so as to be able to form a bottom nearly water-tight, with sides about four feet six inches high, to prevent the liquid from running over until the earth has been moistened by it. The bottom may be of clay and chalk, or gravel, or lime, or any hard substance rammed; and upon the bottom put one row of half-drain tiles in the centre (that is to say, in the centre of beds three feet in width; or, if six feet, two rows), and loose, not jointed. There is an admission pipe sloping at one end to each rank of drain tiles, and a pipe at the other end of the bed to see when the liquid stands at four inches, and then to stop. The earth is then filled in as before, and proceeded with as in ordinary gardening. Water, or liquid manure, on being poured into the pipes, will pass along the whole length of the beds; and rising through the small spaces between the drain pipes, partly by the capillary attraction of the mold, and partly by the attractive power of the roots themselves, will feed and nourish the plants.' So writes Mr. Wilkinson, the able promulgator of this new system of cultivation, in his pamphlet on subsoil irrigation; and that it does nourish and greatly increase the size and produce of roots, vegetables, &c., is an undeniable fact; and that it may be applied with equal advantage to the flower garden is sufficiently obvious."

The system is patented in England.

New Systems of Cultivation.

Novelty is the order of the day. We are to have a ship that will not create nausea, and perhaps a telegraphic cable to America. Horticulturists must not lag behind, and are not disposed to do so. So says the Horticulturist as introduction to the following from the London Chronicle:

"*A Feat in Cultivation.*—Mr. Richard Corke, of Maidstone, recently laid four wagers that by his system of cultivation he would produce more grapes, melons, cucumbers, strawberries, and vegetable marrows, or in fact any vegetable whatever, than could be done by another in the ordinary way, and won them all easily. These wagers originated in a conversation taking place in the company of several gentlemen, one of whom had presented Mr. Corke with some eyes of grapes and some vegetable marrow seed of fine quality. On making inquiry how they answered, Mr. Corke asserted that the canes of the vines would average more than twenty feet before the year came round, having been potted October 25, 1856, and planted out in a new hothouse just finished building on March 7, 1857. At first Mr. Corke wished to decline the wager, as he told the gentleman he must win to a certainty. Being, however, pressed, he accepted a bet for two rods to average twenty feet. This they considerably exceeded, and at the same time three other bets were made respecting the vegetable marrow, Mr. Epps and Mr. Bunyard, the well-known horticulturists, being appointed to survey and watch progress. The stem of the vegetable marrow was eight inches round; its vine, together with leaves and stems, measured upwards of eight thousand feet, the wager being that Mr. Corke would not produce more than sixteen hundred feet. Upwards of four hundred fruit were cut from this Leviathan marrow plant. This discovery will be made public in a treatise nearly completed. Mr. Corke's plan is so simple that a mere child, after some slight instruction, could produce the same effect."

State Agricultural Society's Reports.

[*Continued.*]

WAGONS AND CARRIAGES.

The committee on wagons and carriages beg leave to present this report:

The only pleasure carriages entered were trotting sulkeys. Number 69, entered by H. M. Barnard, on steel springs, very handsomely got up, and deemed entitled to the first premium of its class.

No. 37—Entered by E. L. How, upon wooden springs of very simple construction, but esteemed by your committee entitled to a first premium, of its class, on account of the novelty of the springs.

No. — —A one-horse spring wagon, manufactured by J. L. Ottignon, of San Francisco, of substantial make, and deemed entitled to a first premium of its class.

No. 57—A two-horse, spring, express wagon, manufactured by Wm. Katner, of Stockton. This wagon commends itself, not only for its novelty, but particularly on account of its very superior smith-work. It is entitled to the highest premium.

No. 60—A first-class, good, substantial farmer's wagon, made by A. Rankin, with three seats, to be used with or without top; sits on leather braces, and is, in every respect, a first-class carriage for service, and fully entitled to a first premum of its class.

No. 4—A four horse road or farm wagon, plain, substantial and good; entitled to a first premium of its class. This wagon was made by D. C. Mattison, of Stockton.

No. 43—Last but not least—a twelve-horse wagon, weighing five thousand pounds, eighteen feet in length on bottom, twenty-two feet on top, six and a half feet in breadth, front wheels four and a half, and hind ones six feet in diameter; three-inch axle, and will carry, with safety, twenty-four thousand pounds. This belongs to the class known, by teamsters, under the name of prairie schooners, constantly to be met with in trading through the interior, and commanded by as hardy a looking set of men as ever plowed the briny deep. This wagon was built by Wm. P. Miller, of Stockton. It commends itself to the highest consideration of your committee, who recommend for it a first-class premium, with diploma.

In closing this report your committee take great pleasure in commending, in the highest terms, the mechanical skill devoted to the manufacture of carriages and wagons, in all the varieties that have claimed their attention.

O. H. Pensur,
W. F. Bryant,
John P. Nash, } Committee.

TOBACCO AND CIGARS.

The committee on manufactured tobacco and California-made cigars, find none of the former, and but one sample of the latter.

The samples examined by us were found, in workmanship, equal to the best Cuba cigars, and with age would be a very superior article. They are supposed to have been made of native material, though we have never met with native tobacco of equal flavor to the material of which these cigars are made. By proper attention, however, it is believed by good judges that our soil and climate are well adapted to the growth and cultivation of the best varieties for the manufacture of cigars, which would equal the best Havana, and we may hope, at no very distant day, that we may add tobacco and cigars to our native growths and manufactures.

M. Walthall,
W. Daniels, } Committee.

NATIVE WINES, ETC.

The committee on native wines award to Sainsevaine Brothers a framed diploma, for the best white wine, manufactured from grapes grown in California, of the vintage of 1842. It is considered by your committee the most superior wine on exhibition, and entitled to the first premium.

Also, a framed diploma to Kohler & Frohling, for a superior article of port wine, manfactured from California-grown grapes, of the vintage of 1856. It is considered worthy of special notice, and superior to any imported wine of the same variety.

Angelica, sweet wine, exhibited by Kohler & Frohling, and Sainsevaine Brothers; considered of fair quality; resembling native Muscatel, or Sicily wine, and is much esteemed by the native California population.

Claret.—A splendid sample of this kind of wine was exhibited, without name or label. It was considered by your committee, and other competent judges, as far superior to any claret imported from France or Italy.

No. 19.—S. W. Halsee, of Los Angeles, exhibited a keg of native wine, of the vintage of the present year, 1857, only six weeks old. It is considered pure juice, of high flavor, resembling Malaga—a dessert wine of superior quality, and will improve by age. It is highly exhilarating, but deprived of that acrid property which produces headache. Your committee deem the manufacturer entitled to a framed diploma, or a special premium, and would call the attention of wine growers to his article, herewith appended, on the method of making pure wine.

Of currant wine, only one sample was exhibited. It was considered of a superior quality and excellent flavor. To the manufacturers is awarded a premium of ten dollars. No. 18—Thompson & Co., Suscol Ranch Nursery, Napa county.

Specimens of brandy were also exhibited to the committee, manufactured from the grape, from the pear, and from the beet. The latter is considered worthy the special attention of the agriculturists and manufacturers of California. The brandy is made from the residue and foam of the beet, after the beet itself has been converted into sugar. It can be afforded at forty cents per gallon. The manufacturer is Eugene Delessert, of San Francisco, and is entitled to a diploma from your society.

Alcohol, manufactured from the pear, the tomato and the beet, was also exhibited. The different specimens were all of good quality and strength, and considered worthy of encouragement and attention, and can be produced cheaply, for use in arts and manufactures.

Robt. K. Reid,
J. C. Cobb,
Eug. Delessert,
Horace Webster,
Thos. W. Seeley,
J. D. Watson, } Committee.

NATURAL SODA WATER.

The committee to whom was referred the natural soda water from the Mountain Springs of Napa, report the analysis of said water from the different springs, as made by an eminent chemist, Dr. Lauszweert, of San Francisco:

Residuum from Evaporation, in one quart, in grains.	Crystal Spring.	Rock Spring.	Soda Spring.
Bicarbonate soda.....	3.20....	3.22....	3.28
Carbonate magnesia....	6.45....	6.50....	6.53
Carbonate of lime.....	2.65....	2.68....	2.72
Chlorid of Sodium.....	1.32....	1.33....	1.30
Sub-carbonate of iron..	1.05....	1.98....	1.16
Sulphate of soda.....	0.42....	0.40....	0.46
Sulphate of lime.....	0.30....	0.33....	0 00
Phosphate of soda.....	0.39....	0.50....	0.00
Silicious acid.....	0 85....	1 02....	0 17
Alumina.....	0.23....	0.23....	0.15
Loss.....	0.58....	0.68....	0.62
Solids in 1 quart, grains,	17.44....	18 87....	16.39
Temperature, Fahrenheit,	64.4....	66.2....	68

These springs are situated on the side of a mountain, about five miles from Napa city, in Napa county. They are on the eastern side of the valley. At no distant day they are destined to become a favorite resort for the sick and afflicted, as well as for the wealth and fashion of the State. The water is now bottled in a superior manner, and by an entirely new process. From the moment the water issues from the rock, until it is safely corked in the bottle, it does not come in contact with atmospheric air, so that none of its properties can by any possibility be lost. It is then transported and offered for sale in the different cities of the State. Messrs. Buckman & Allen are the proprietors. Robt. K. Reid, C. W. Norcrom, } Committee.

Employment of Convict Labor.

The following valuable article was handed us by the author, and although it has been previously published, from the importance of the suggestions we give it place in our columns:

Messrs. Editors: There seems to be some difficulty in devising a mode for the employment of convicts, so as not to interfere with the interests of the tradesman and the mechanic. Allow me to suggest a plan, the adoption of which may obviate the injustice complained of. The State possesses an immense property in overflowed lands, producing little or nothing in the shape of revenue; the convicts could be employed in a partial improvement of this property. Let these lands be marked out into sections, the levels taken by competent surveyors, embankments thrown up, and outlets for the superfluous water constructed. When a section is completed, let it be brought into market, adding to the present price one-half only of the actual outlay for improvements. Let the purchaser be bound to keep up these improvements, particularly to keep the drains clear; for nothing deters a capitalist more from becoming a purchaser than the risk of having a careless or an evil-minded neighbor, who may ruin his crops by obstructing the free egress of water from his lands. Hulks can be fitted up for the safe keeping of the convicts, and moored in the vicinity where the gangs may be set to work; but this is a mere matter of detail, reserved for a future letter.

By the adoption of this plan, permanent employment can be had for the convicts; a large tract of valuable land will be brought into market, with every inducement to purchasers to render it available for agricultural purposes. The State treasury will be replenished, and the mechanic and the artisan no longer interfered with.

Rusticus.

Ocean Steam Navigation.

We commend the following significant remarks upon Ocean Steamers, from the New York Herald, of March 10th:

Several new projects of steam communication with European ports have lately been started. We are afraid that the results of these enterprises are not likely to fulfill the hopes of their projectors. There is but little encouragement in this country for the employment of capital in such undertakings. The indifference manifested by Congress in regard to the Collins line, and other speculations of a similar character, has naturally induced a feeling of hesitation on the part of capitalists to embark their money in mail lines. The disposition on the part of our government seems, in fact, to be, to hold out to the English and other foreign lines all the inducements possible, and to discourage and crush out native enterprise wherever it can. This is a bad state of things; and unfortunately, it is aggravated by the jealousy and hostility of the American steam navigation interests themselves. When these interests come in conflict they never think of accommodating matters, or of amalgamating, as is commonly the case abroad. The difficulties attending the arrangement of the Nicaraguan Transit disputes show the pertinacity with which our shipowners hold on to their own selfish views, notwithstanding the advantages that are to be gained by an amicable compromise. The consequence is that the only American steam navigation enterprise which is remunerative at all is the California line, and this only because of the fact that it is not exposed to foreign competition, like those plying to Europe and other parts.

It would be a matter of indifference to us how all these companies managed their affairs, but for the depressing effect which these influences exercise upon our steam navigation interests generally. In other countries it is found advisable to encourage those interests either by favorable legislation or by pecuniary subventions on the part of government. With us the inclination is decidedly to give to foreign mail lines all the advantages which the crushing out of home competition can afford them. The narrow-minded and illiberal course pursued towards the Collins company, may be regarded as a great blow and discouragement to any further efforts to wrest from the English companies the monopoly of the goods and passenger traffic which they have for so many years enjoyed. If Congress perseveres in this suicidal policy, we may soon expect to see the whole carrying trade of the country pass into foreign hands.

The Little Pilgrim.—Every parent in California should have the Little Pilgrim. There is no book or paper in the English language, save the bible, that contains more truthful and beautiful themes, adapted to the minds of children and youth, than Grace Greenwood's Little Pilgrim." The work appears every month, prettily illustrated, to win attention and lead the young mind like a tender plant to truths so plain that even a child will learn them. Subscriptions received at our office; fifty cents per year.

A Western editor expressed his delight at having been nearly called "honey" by the girl he loves, because she saluted him as old "Beeswax" at their last meeting.

THE PEASANT'S SONG OF SUMMER.

[It may not be generally known that one of Scotia's bards, whose music has oft been sung o'er hill and dale, is with us, though many warm friends know it; but the lovely weather of the last Sabbath tells us that *summer* is near, and opening a beautiful volumne of poems that lay on our table, we read the following gem, written by James Linen, Esq, author of the volume, who has been a resident in our city for years. This song is appropriate for such a season:)

Now tripping along through morning dew,
Blithe Summer comes with a rosy hue;
To greet her, the hills their voices raise,
And the woodland songsters hymn her praise.

Like her sister Spring, when lately seen,
She's dressed in a vernal robe of green;
And her flowing skirt that Nature weaves
Is broidered o'er with flowers and leaves.

On her head a fragrant wreath she wears,
And her hand a golden sceptre bears;
Like some beauteous queen, with regal pride
She scatters her blessings far and wide.

She passes on with an air of grace,
And roses blush on her bonnie face;
She smiles on fields, and they greener grow;
She breathes on flowers, and they brighter glow.

Her reign is sweet, yet anon so wild,
She is wanton as a playful child;
She unbinds the winds that howling sweep,
And lash the waves of the surging deep.

Oh! she tears the misty vail away
From the mountain's brow where the lambkins play.
And the tainted air she purifies
With her flashing lightning from the skies.

She gives her scents to the passing breeze,
And ripens the fruit on bending trees;
She points to the fields of golden grain,
Which tell that labor is not in vain.

Where the humming bees in blooming dells
Sweet honey sip for their waxen cells,
The sun may scorch, but she nightly showers
Her gentle dews on the drooping flowers.

Where the peasants mow on yonder lea,
There are mingled sounds of social glee;
They laugh and sing, and they toil away,
And of withered grass make russet hay;

While sets the sun in an opal sky,
Away to their cottage homes they hie,
And the smiles of Peace aye meet them there
And the day is closed with grateful prayer.

I love the fields, and to Nature's shrine
My heart still clings like a clasping vine;
With bliss so pure, and with joys so rife,
Oh! give me the peasant's happy life!

The Marriage Fee.—The late Dr. Boynton was once disputing with a farmer about the ease with which a minister earned his money. "Now," said the farmer, "when you are called on to marry a couple, you never expect a less sum than three dollars, and you sometimes get ten dollars; this is for a few minutes' service." "Pooh!" replied the doctor, "I would agree to give you half of my next marriage fee for a bushel of potatoes." "Very well, said the farmer, "I'll take the offer, and send you the potatoes." A few days afterwards, the doctor was called on to splice a loving couple at Dogtown, a place about four miles from where he lived. When the ceremony was over, the bridegroom said to the worthy minister: "Well parson, I s'pose I must fork over something for your trouble. What say you to taking one of my terrier pups? The best breed, I tell you, in the country. Shocking nice to have in the barn. Worth full five dollars; and I s'pose a figure 2 would do for the splice, eh?" The doctor took the pup with joy. The joke was too good; he hastened to the farmer, saying: "Now, friend, here is my fee; how shall we divide it?" The farmer relished the joke so well, that he increased the potatoes to half a dozen bushels.

Wedding Ring.—The fourth finger was originally chosen for wearing the wedding ring, for the reason that it is not only used less than either of the rest, but is more capable of preserving a ring from bruises—having this one quality peculiar to itself, that it cannot be extended but in company with some other finger, whereas the others may be singly stretched out to their full length and straightness.

Theatricals in Sacramento—No. 2

MR. AND MRS. WOOD AT THE "FORREST."

(INTENDED FOR LAST WEEK.)

This gentleman and his wife, for the past week, have drawn very fair houses; but their style does not seem to please the Sacramento public. The Sacramentans have ever been liberal, and encouraged those possessing talent and genius who have ever appeared before them. But Sacramento is, and will be, the "Athens" of California. The people have a highly cultivated taste, not only in theatricals, but in music, and everything that tends to elevate the mind and soul. The people here have a great taste for theatrical representations—that is, dramas of the highest order, and will support them. They have witnessed so many personations of the best actors and actresses, and naturally having a love for the drama, they are capable of criticising very justly and truly. They have a great abhorrence of anything unchaste in word or action on the stage, which unfortunately is too often introduced to make a vulgar laugh. But no gentleman wishes the chaste ears or sight of his wife or sister polluted with sights and vulgar words which they are subjected to, more or less, if they frequently attend the theater. The taste of the Sacramento public is of a high order, and when a good moral play is brought on the stage, it is always appreciated by an overflowing house. Plays should be put upon the stage according to the taste of the people. Such an outrageous sacrilege on Longfellows beautiful poem of "Hiawatha," after Madame Lesdernier's rendering of it in her beautiful, melodious voice; this abortion can produce on the mind nothing but disgust. The Drama in California needs a thorough purification, for there are many on the stage who have no right there; they have no education, no personal appearance, no delivery, and have not the first idea of what a lady or gentleman is; and many of very bad habits, who do much to bring the profession into disrepute by scandalising each other. People only of liberal education and virtuous behaviour should be admitted on the stage. There are some of the underlings so presumptuous who think if they can speak a few lines on the stage, that constitutes them actors and actresses, and, with all the assurance, assume the most ridiculous airs, and expect homage done them as something wonderful; and it is by this class that vulgarities are introduced upon the stage, to shock the ears of the delicate and refined.

In the theater, like the pulpit, we should hear the English language in all its purity; but, alas! how can you expect from uneducated men and women pure English? Where there is no education, the stage is the refuge, in this country, for many abandoned people. The theater should be a place where parents can take their children, to witness a moral and pleasing play, that would leave on their young minds pure thoughts and reflections. Such plays as "Jack Sheppard" and "George Barnwell" have an immoral tendency, and a manager should never let his better reason be cast aside, to please the inordinate vanity of actors or actresses, to produce on the stage such plays. There is another objection to theaters—that of a bar-room being connected with a theater. The audience is universally disturbed by some noisy fellow, who has imbibed at the theater bar during the acts. It sets a bad example to those around. This should not be. When these evils are remedied, the theater will be honored as an institution where instruction and relaxation for the the people can be obtained, and the drama elevated to its proper standard. There are many good men and women in the profession, who deserve much credit. Mr. Maguire has exerted himself a great deal towards getting the best talent to this country, and his companies are generally well selected. He has great energy as a theatrical manager, and we wish him success.

In regard to Mrs. Wood, although a pleasing actress in burlesque, and also a little "broad," the people of Sacramento would appreciate her more in tragic parts. Those soul-speaking eyes of hers are full of tragic power; they are very much like those of our young Sacramento favorite Edwin Booth, and the ladies say his eyes are very beautiful.

Mrs Judah is one of the company now playing here. She always has a just conception of the part she plays. In speaking with a prominent gentleman belonging to this city in regard to the merits of the company, he said he liked them all pretty well, but, with a perfect burst of enthusiasm, he cried, "Old marm Judah, she plays better than any of them." We always like to see her on the stage. Mrs. Grattan is a pleasing little actress. Next week I will write you what I think of Mr. Wood.

QUEEN BESS.

Saturday night 27th ult.] Mr. and Mrs. John Wood closed a very successful engagement at the Forest Theater. The Sacramentans are delighted with them both. There has been quite a furor in the theatrical world in regard to the lady. In all of the characters she has played, she has displayed a great deal of originality of conception in her acting, a knowledge of stage business, and a happy tact to produce effect; always playing at her audience, that is one secret of her power over the risible faculties of those who listen to her sweet voice. She has evidently been educated in the best theatrical schools, and has had much opportunity to witness and study the acting of the best performers of the age. Her natural abilities are very good, and these combined with her theatrical education, have stamped her an artist of great merit.

The acting of John Wood carries one back to the palmy days of Barnes, Cowell, Jefferson—their acting was the embodyment of character; they played so life-like and natural; the freshness and originality of their acting we can remember now. How their words thrilled through your brain; how naturally they laughed, and with what pleasure you laughed with them. Mr. Wood is a perfect artist, and his like in his own peculiar line has never been seen in California. His acting will long dwell upon the mind. He has made many friends in Sacramento, as well as his lady. We wish them success in San Francisco, and hope to see them back soon.

Miss Grattan is liked much in our city by playgoers. She has a great deal of naivete, dresses modestly, and with becoming taste. Mr Courtaine improves upon acquaintance, and appears to understand his profession thoroughly. He and Miss Grattan, his wife, are very valuable acquisitions to a company, and we will always be pleased to see them on the Sacramento stage; they have many well wishers.

Mrs Judah will always be welcomed by her hosts of friends, to the Sacramento boards. During her engagement here she has acquitted herself well in every character she has played. We hope to see the same people that are in the company now, back again in a few weeks.

On Wednesday night, Mr. and Mrs. Wallack open at the Forest. They are fine artists, and will make a good impression here.

In a few nights Mr. Mitchell, a theatrical gentleman, will open his canvas theatre. As it is something new in this country, he will probably do well for a few nights. He purposes going through the mountain towns and mining camps, stopping one night at each place. He has for leading man, Mr. Warwick, Mrs. Woodward to lead the business; Miss Sophia Edwin, or rather Mrs. Stephens, and others of the same caliber. The company numbers forty people. It is a portable theater, with scenery, stage, and all other appurtenances. They open with "Putnam," and intend to play several "horse pieces." As novelty is the order of the day, they may succeed very well. More next week. QUEEN BESS.

THE DAWSON HOUSE, SACRAMENTO.—We are happy to bear our testimony to the excellent manner in which this fine and fashionable Hotel is conducted. The Dawson is liberally patronized by members of the Legislature, and by strangers visiting Sacramento. Mr. Kelley is ever on the alert to provide comforts, and with his courteous clerk Malone, always ready and attentive to the wants of their guests.

SEED, PLANTS, &c.

Ornamental Shrubbery.

THE Greatest Variety in the State may be found at the

GOLDEN GATE NURSERY,

Corner of Fourth and Folsom streets,

COMPRISING

5,000 Monthly Roses, of 150 varieties;
2,000 Carnations, of 120 kinds;
500 Monthly Honeysuckles, of 8 varieties;
500 Acacias, of 10 varieties;

Laburnums, Arbor Vitæ, Myrtles, Euonymous, Silver Maples, Mimosa, Clematis, Cytisus, Eucalyptus, Lilacs, Jasmines, Mock Orange, Athlacas, Spiræa, Weigelias, Deutzias; and a general variety of

Hardy and Green House Plants.

☞ Skillful Gardeners provided for laying out grounds. Office at the Nursery, and 171½ Clay street, above Montgomery v7-24

Chinese Sugar-cane Seed.

A PURE and reliable article. For sale in large or small quantities at moderate prices; with a large assortment of **Flower, Vegetable and Agricultural Seeds,** of the choicest qualities, by

JAMES M. THORBURN & CO.
19-tf 15 John street, New York.

To Seedsmen, Planters, &c.

THORBURN'S Preliminary Wholesale Priced List of **Vegetable and Agricultural Seeds, Dutch Bulbous Roots, Double Dahlias, &c.,** for the Fall of 1857, is just published, and will be mailed to dealers and others requiring seeds in quantities, inclosing a stamp for return postage.

This year's Seeds, so far as harvested, are of prime quality, generally abundant, and prices correspondingly moderate.

LAWTON OR NEW-ROCHELLE BLACKBERRY PLANTS!!

PRICES REDUCED!

THE subscribers announce to their friends and customers that they have now

OVER SIX ACRES
OF THE
GENUINE LAWTON (or New-Rochelle)
BLACKBERRY PLANTS,

under cultivation, and in good condition.

They are therefore prepared to fill large orders the coming FALL and the next SPRING, at the following reduced prices:

One Thousand Plants	$125 00
One Hundred Plants	15 00
Fifty Plants	8 00
Two Dozen Plants	4 50
One Dozen Plants	2 50
One Half Dozen Plants	1 50

☞ Good Plants for setting, of a second size, will be sold for $100 per 1000 Plants, or $12 per 100 Plants.

N. B.—All Plants ordered of us will be taken up and packed with the greatest care, and under our own personal supervision.

Of the many thousands sent out by us last year, we have heard very few instances of failure, notwithstanding that they have been forwarded to *every part of the country, and to California, with perfect success,* and the setting out has often been entrusted to unskillful hands.

Printed directions for setting and cultivating are sent with every package. GEORGE SEYMOUR & CO.,

SEED WAREHOUSE.

No. 110 CALIFORNIA STREET,
(Established in 1850.)

THE undersigned, successor to the late firm of J. M. MOORE & Co., has constantly on hand, and receives by every Express and clipper ship from the Atlantic States and Europe, additions to his already large assortment of choice

Field and Garden seeds, Flower do., Fruits do., Tree seeds, Canary, Hemp, Millet, Rape and Maw seeds, Herb seeds, French Sugar-Beet seed, Chinese Sugar-Cane seed,

DUTCH BULBOUS ROOTS, and other FLOWERING ROOTS, BULB GLASSES, GARDEN TOOLS, &c. &c.,

which he offers to the Farmers and to the trade throughout the State on liberal terms. The old and wide-spread reputation of this House, of furnishing the best Seeds that can be procured in the Eastern States and Europe, is a sure guarantee that every article sold will prove true to the label, and will grow, if properly planted. Most of the Garden Seeds are raised and put up by the Shakers, at New Lebanon, New York.

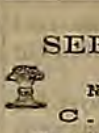
N. B.—Parties wishing small papers of Seeds for samples, can have the same forwarded by mail (postage paid), by forwarding the cash, at the rate of 25 cents per paper; also, packages of Flower Seeds forwarded through the mail at the same rates.

CATALOGUES furnished, on application, with prices attached.

For sale, wholesale and retail, by

S. W. MOORE,
Importer and Dealer in Seeds, &c.,
v8-2-3m No. 110 California st., San Francisco.

The Concord Grape.



THE ORIGINATOR OF THIS NEW GRAPE offers for sale a fine stock, raised from the parent Vine. It has fully sustained its reputation as

The Best Grape for Out-door Culture

having survived the last two severe winters unharmed, where the Isabella, Catawba, and other vines were killed to the ground.

For Size, Beauty, Quality and Bearing,

it is unsurpassed. It is perfectly hardy, and has never been affected by rot or mildew, while it ripens from three to four weeks earlier than the Isabella, and two weeks earlier than the Diana, in the garden of the proprietor.

Fine, strong plants, at $1 50 each; $12 per dozen. Two years old, at $2 each. Three years old, extra, at $3 each. A liberal discount to clubs and the trade. Orders, with cash or good reference, promptly attended to. Address

2 3m E. W. BULL, Concord, Mass.

Choice Seeds.

A VERY choice assortment of **GARDEN SEEDS,** selected with great care, expressly for

4 BRYANT & CO. 68 Battery st.

Rare Melon and Cucumber Seed.

WE have received a few packages of NEW PRIZE MELON and CUCUMBER SEED, from Europe—worthy especial attention. WARREN & CO.,

1 Washington street (up stairs)

Sugar Beet and Chinese Sugar-Cane.

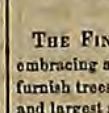
A FINE Invoice of Seed of the above, just received and for sale at our office.

WARREN & CO.

☞ **Hemp Seed.**—A superior lot of pure seed just received at the office of the Farmer

HORTICULTURAL.

A. P. SMITH'S



POMOLOGICAL GARDEN
AND
NURSERY,

On the American River, 2½ miles from the Steamboat Levee,

SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE, embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being CORRECT AS TO NAMES AND VARIETIES, are as PERFECT AS IS POSSIBLE TO MAKE THEM.

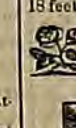
In the department of

Shade and Ornamental Trees,

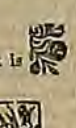
We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.



Shrubs and Roses.



A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

MAGAZINES, ETC.

THE

"HORTICULTURIST"

AND

Journal of Rural Art and Rural Taste.

(Commenced by the late celebrated A. J. DOWNING.)

Conducted by J. JAY SMITH, Editor of the North American Sylva.

THE increasing love of Rural Life has brought this popular publication into extended notice. Its success has been amply proved by a large addition of readers, and it is now offered to public patronage with confidence. It embraces in its scope of subjects everything pertaining to the country and country-pursuits, and aims to instruct while it amuses: it is, in short, as now conducted, a popular RURAL MAGAZINE, designed to interest all lovers of the Garden, the Country-house, the Cottage, no less than the Botanist, the admirer of the Green-house, Conservatory, Grape-house, Fruit Cultivator and Planter. Its correspondents are those who have long devoted their energies to these pursuits, and it is believed the number of these, and the information they impart, is greater than any other periodical can boast of either in Europe or America. Indeed, the work has become indispensable to the well-informed country-dweller, who, by a perusal of its varied pages, may maintain an acquaintance with all that is passing in the fruit-garden and orchard, the nursery, the villa, and with the beautiful in nature, whether it is improved by art or adorned by taste. In its Rural Magazine character it is addressed to all who love information, and it has thus become a welcome guest both in town and country. Its circulation now embraces the entire Union and Canada, and endeavors are constantly used to increase its attractions by a liberal outlay in embellishing it with costly engravings of fruit, dwellings, trees, and those numberless rustic adornments which make the individual home attractive.

A NEW VOLUME (13th year) commences with the January number for 1858: and it will be the constant aim to render it still more worthy, by every practicable improvement, of the liberal patronage it is receiving.

The work is issued on the first of each month, in the best style, each number containg 48 pages, embellished with a frontispiece and several other original and well-executed engravings. The volumes, taken for a number of years, will make a valuable Encyclopedia of Horticultural Literature. As an advertising medium it has few superiors.

TERMS—Two Dollars a year; Four Copies for Six Dollars, payable in advance.

An edition is published with plates colored in the best style of the Art. Price, $5.

SAN FRANCISCO, FRIDAY, APRIL 16, 1858.

STEAMER EDITION.

A Perfect Plan to Water Trees.

EVERY artificial plan to irrigate lands, trees, or plants, should, as far as possible, be in imitation of nature. It is a well-known fact that the very best means of watering, in dry countries, are those that feed the root from below, rather than from the surface of the ground; the system of subsoiling, trench-spading, deep plowing, and like operations, giving life, health, and vigor, and by the capillary attraction the water is drawn up from the earth below by reason of the heat above.

The recent plan of boring tubes of two inches in diameter, and inserting lead pipes, and then attaching them to the rotary pump—thus giving a pump at small cost, as practiced in Stockton with great success, has called attention to facts which can be made of great service in all parts of our State, wherever there is this hard adobé land. In every county that has this black soil, or even red soil, such as is used for making brick, and on our broad, dry prairies, it is well known that water can be found at depths varying from twelve to thirty feet; and in all such places we now ask particular attention to the following valuable facts, which can easily be verified by any person, at a trifling cost:

One plan is simply this: procure a two-inch auger, and have it prepared (as used for boring wells) with joints of square iron rod, and with a handle that can be slid up and down (made fast with nut screws) as the work progresses. Then bore into this mold of earth, until you reach water; then fill up this tube with coarse sand. At all times afterwards, by capillary action, the water will be drawn to the surface of the earth, in sufficient quantities for all that grows above it.

Let any one try the following experiment: dig a hole two feet deep, and three feet in diameter; in the center of this hole, bore as described, for water; fill up the tube with sand; then plant a tree in that hole, and forever after you have, by capillary power, a fountain ever flowing to the roots of that tree. This will be *natural* to the tree, and it will only flow as the tree needs it, and it will also be perceived that the roots of the tree (the tree will form special tap roots) will go down this tube, and feed upon the living water below. This same plan may be adopted through an entire orchard. It can be used in trenches, and beneath hedges, but remember, in holes or trenches, they must be filled up again, after the tube is bored, and filled with sand, else they will not operate well

We commend this to all who wish to learn a natural way of irrigation. The cost of boring, in usual places, 12, 15 and 20 feet, will be only twenty-five to fifty cents per tube.

Will our friends let us hear from them.

Watchmen! what of the Flour Market now?

Where are the men that told us Flour would be $25 per barrel in April? Where are those journals that so often and earnestly warned the people of coming scarcity and famine? Where is the scarcity? Where is the famine? Perhaps they have got the news at Honolulu and Guaymas, and *out of charity* are sending us flour and wheat to keep us from starving. But these several lots now arrived are but the heralds of more near at hand; for soon we shall have quantities from many other countries, so that by the first of May we can have flour at $10 per barrel. If those who hold large quantities now fail to dispose of it, they will soon have cause to regret it; for as sure as two and two make four, our flour market cannot stand the pressure. The present price is beyond its value, and flour, like water, will soon find its own level.

Where is our neighbor of the Times? What is the price to-day brother?

Those who have quantities, and have it hypothecated, had better sell and get out of the trouble. Sell now, realize, and be safe, *one week more* and you may be too late.

To Our Readers and Correspondents.

We have two letters from our highly esteemed correspondent "Grace Greenwood," which will appear immediately, in course. Each letter will be esteemed a gem by the host of friends of this gifted writer. The first will appear next week.

A most estimable communication from "Sallie," came by last steamer. Its beauty, truth and worth, will be fully appreciated by our readers in our next issue.

A highly valued letter came also by last mail from "Rosa," from Michigan, that will shortly appear.

Our kind friend O. N. C., from Michigan, sent us a good letter, which will appear in our next.

We have received from our highly esteemed friend "Agricola," a most valuable communication, "The Guardianship of Nature," which will appear in our next.

"Old Maids," by Edith Montressor, received, and will appear.

We thank our friends for their kind aid. All communications shall appear as fast as possible.

HIDES, TALLOW, AND WOOL.—These three articles are now great articles of export, and in every city there are warehouses where they are purchased at full prices for cash, and promptly exported; thus converting them into a material for exchange, and saving so much gold from being exported from our State. Those who have these articles for sale, can find purchasers by referring to our advertising columns. Hides are improving, and command readily $2 25 a $2 50 each; Wool Pelts, 25 a 37½c. each; coarse Wool, 14½ a 15c per lb.

Improvement of the Breed of Horses.

We call the attention of our readers, especially of those who are interested in the raising of fine horses, to the following article, which was prepared by one who, as our assistant editor at the East, had the opportunity to collect important facts by personal observation. We know they will find it worthy attention:

It was our pleasure, previous to leaving for California, to pay a brief visit to the Farm of Simeon R. Bowne, Esq., Flushing, L. I., and notice the *real* improvement he has been making in Horse stock. The farm of Mr. B. is one of the best regulated in that section of the country, embracing some five or six hundred acres of land on Long Island. Some two or three hundred acres are under cultivation, and produce fine crops annually. The breeding farm occupies, alone, seventy-five acres, and possesses all the facilities necessary: pasture, water, &c., of the best kind.

Mr. B., although young, has devoted much time and money in the perfection of good stock, and his stud embrace some of the best blood in the country. We noticed some twenty-five brood mares, many of which were in foal by the best horses, and in perfect health.

It will be remembered that Mr. Bowne lately become the possessor of the celebrated "Sontag," a description of which we give below, and had by her a colt, sired by the famous "Ethan Allen," the fastest trotting stallion that has appeared on the turf—sired by Black Hawk. The following are those we particularly noticed:

HORSES AND BROOD MARES.

1. Young Trustee; splendid chestnut horse; got by imported Trustee (the sire of Fashion, and of the celebrated trotting horse Trustee) out of Lady Salsbury, by Abdallah; she out of a Messenger mare. Young Trustee is three years old, and 16 hands high. He has been exhibited three times, we believe, and bore off the premium each time.

2. Sontag; gray mare, by Hamiltonian, out of a mare of Arabian descent. She is now 9 years old, having received first premiums at the principal Fairs. At the Fair in Springfield, Mass., in Oct. last, she took the first premium of $100, in class of Mares with foals at side. In 1855 she beat Flora Temple in the great match for $2000, drawing behind her 300 pounds; time 2:31, 2:33, 2:35—the best time ever made to the weight. She has trotted a half-mile in 1:08.

3. Lady Salsbury; brown mare; a noted trotting mare, now 17 years old; out of a Messenger mare by Abdallah. She is a fine, well-formed mare, and has produced some superior colts.

4. Chestnut mare; by One-eyed Kentucky Hunter; dam by Duroc. She is half-sister to Flora Temple, and was in foal to Young Trustee. Her speed, 2:45; 9 years old.

5. Black mare; 5 years old; out of an imported mare, by Flying Cloud. Also in foal to Young Trustee.

6. Black mare; 6 years old, by a Morgan horse, out of an imported mare.

The last two animals are a matched pair. A finer pair we have not seen for many a day. They have received first premiums at County shows.

7. Black mare; by Flying Cloud, dam by Almack; 5 years old.

8. Chestnut mare; 8 years old; by imported Trustee, out of an imported mare.

9. Brown mare; by Blucher; dam by Duroc 9 years old, 16 hands high.

10. Brown mare; 5 years old; by Edwin Forrest, dam by Duroc.

11. Brown mare; 5 years old; out of a bred mare, by Mambrino Chief.

12. Trojan; brown colt; foaled in May, 1855. Trojan is out of Lady Salsbury, by Flying Cloud; a most promising colt. He took the complimentary premium at Springfield in 1857.

13. Bay filly; foaled in spring of 1857, by Young Trustee, out of the black mare (No. 7), by Flying Cloud.

14. Seth Warner; chestnut colt; foaled in June, 1857, out of Sontag, by Ethan Allen. This colt attracted our particular attention, for her most symmetrical form, and spirited style of movement, and exhibited, in the highest degree, the full characteristics of sire and dam. This colt promises to be a trump.

15. Priam; brown colt; foaled May, 1856; own brother to Trojan (No. 12), and matches him in every respect. They are very fine looking colts, and display great trotting powers, with bold, resolute style of action, and high spirit. Priam received premium at Springfield Exhibition, in 1857.

There were a number of other fine colts, which promised well, the merits of which we may speak of in a future article. Besides these mentioned above, Mr. B. has a number in the Eastern States, now breeding to celebrated horses.

Mr. B. enjoys a very liberal income, and being a great lover of horses, and possessing fine taste and judgment, has devoted a large proportion of it to their improvement, and his efforts have been of much advantage to that section of our country, as well as affording him that amusement to which his wealth and liberality fully entitle him. Such enterprises are commendable, and we are proud to speak of them, for the benefit of an enlightened public. Our visit was brief, and quite unexpected; but the courtesy of Mr. Bowne, and his esteemed and talented lady, rendered our sojourn at the mansion truly pleasant and agreeable, and it will always be treasured among the happy incidents of the past. W.

"THEY HAVE EYES, BUT SEE NOT."—Nature will wear out, even in the best constitutions; even *we* learn this; and those who, by age, or by reason of intense study or reading, have overstrained or injured their sight, we advise to go at once to those famous opticians Messrs. Lawrence and Housworth, and see their *sights* of spectacles. Their shop is a *spectacle* indeed.

The Religious Revival.

"Already, the field is white to the harvest"

No person could be a reader of the news from the East, touching the subject of the revival, which has come to us for many months past, and not feel confident that the same work would commence upon the Pacific shore; in fact it has been in progress here for some time, quietly yet steadily, burning in the hearts of men like a smothered flame. No observer of human character but could see that men were convinced, that

"Life was real, life was earnest,
And the grave was not its goal;
Dust thou art, to dust returnest,
WAS NOT SPOKEN, OF THE SOUL."

Men of all ages and conditions are now conscious, that this "Life in California" must have some higher aim than the mere pursuit of gold. Thousands of men have been living witnesses that they have often *nearly* attained this *goal* of their ambition, when some hand has struck down the gilded cup of wealth, and they have been left *unblessed*. The past history of California tells in thunder tones, that gold, only, cannot *satisfy* the SOUL of man.

The present religious excitement is and will be a matter of history, that will mark the present age, and we believe with the evidence before us of its character abroad, that we are on the eve of a religious revival in California such as the world has never seen; for the struggle will come between "gold, as the root of all evil," when loved as it has been here, and that love of the Deity and our fellow men, which are the great commands for man to obey. We find the following clear and able remarks upon the subject, in the New York Daily Times, which are so appropriate at this moment, that we believe our readers will peruse them with interest as facts in the eventful history of the present time, which should be in every journal, irrespective of all feeling of party or creed. One great and glorious feature of good in the present movement, is the union of all for the good of all:

It is not often that the Daily Press feels called upon to chronicle the spiritual movements of the public mind. These are assumed, of course. It is felt that all the best part of society visible to the world—its morality, and order, and benevolence—rests on an unseen basis; but into that foundation we are not generally disposed to pry. The region of a man's religious impulses does not usually belong to the editor's field. We fear the effect of publicity on such delicate matters, and, in dread of both hypocrisy and fanaticism, the greatest subject which can agitate the human mind is usually dropped from our columns. Yet, in our own and the English history, there have been certain periods of high moral excitement, when men uttered in public, and the public did not scoff to hear, the most intimate revelations of religious feeling. The men of the Reformation spoke and wrote of their inner experiences as men speak now of politics or arts. The Puritans of New-England solved all the problems of morals and of politics by a reference to the truths of religion, and treated those things as the mere outgrowths of public life which to us appear as its roots and secret. There are terrible dangers of hypocrisy and cant lurking in the habit of public allusion to these private questions of the individual soul, it is true, but there are merits, also, of spiritual manliness discernible in the impulsive faith which evolves from the heart of a society surrendered to worldly and material aims—these frank avowals of intense conviction upon points of solemn and sacred interest; and these merits should not be overlooked.

The great wave of religious excitement which is now sweeping over this nation, is one of the most remarkable movements since the Reformation. From every hamlet and village and town; from the forests of Maine, the crowded city-ports, the manufacturing towns, the new cities of the West; from the villages of the southwest, and even from the mines of California, we have constant reports of the profound religious feeling and interest of the people on this great subject. Travelers relate that on cars and steamboats, in banks and markets, everywhere through the interior, this matter is an absorbing topic. Churches are crowded; bank directors' rooms become oratories; school-houses are turned into chapels; converts are numbered by the scores of thousands. In this city, we have beheld a sight which not the most enthusiastic fanatic for church-observances could ever have hoped to look upon;—we have seen in a business quarter of the city, in the busiest hours, assemblies of merchants, clerks, and working-men, to the number of some five thousand, gathered day after day for a simple and solemn worship. Similar assemblies we find in other portions of the city; a theatre is turned into a chapel; churches of all sects are open and crowded by day and night.

All this great movement goes on moreover quietly; there is but little nervous excitement or extravagance, so far as we have heard. The machinery of Revivals which supported the older movements is not in use; the "Revivalist-preachers" have not appeared, and we trust will not appear.

The excitement, which no doubt is intense, is deep, earnest, and moral in its nature. There are peculiarities in this Revival which distinguish it from all previous "awakenings." It is not so exclusively an offshoot of the Calvinistic and Puritanic system of theology. Under Edwards and his successors, the great prominent impulse which shook the minds of men, and which has stamped every subsequent generation of New Englanders, was fear. It was the terrible aspect of retribution, as held up by those powerful and eloquent divines, that thrilled the people, and awoke, as by a miraculous stroke, the slumbering conscience. Other elements have, of course, intermingled, but this passion has domineered over all succeeding religious awakenings; and it was this, undoubtedly, with similar influences, which rendered the Unitarian and Episcopal bodies averse to such excitements. We do not discover this as the prominent characteristic of the present Revival: and as a consequence all sects and Churches, each in the mode suited to their history, are feeling, in a greater or less degree, the effects of this new interest. Whatever be the essential character of such a movement, it demands now, from the extent and the depth of its workings throughout the nation, a respectful treatment.

The truth is, that in the various absorbing employments of such a life as prevails in this country, we forget what a man really is. We see people sunk in business, or lost in the plots of politics, or enjoying society here and there—and they seem utterly matter-of-fact and worldly, and given up to having a good time while they live, and very much forgetful of everything else. So our whole nation appears to foreign travelers. Yet it is not so at all. The dry, sharp man, who meets you on 'Change, or talks politics so eagerly in the morning car, is very possibly fighting within himself—a struggle to which all the strifes of business and politics are child's play. We do not know men—each man sometimes becomes aware what it is to live. The tremendous problems of existence—sin, character, salvation—grow then and press fearfully upon him, and drive out for a period every other interest. It is most impressive to think that over this great land tens and fifties of thousands of men and women are putting to themselves at this time in a simple, serious way, the greatest question that can ever come before the hman mind—"What shall we do to be saved from sin?" Calamities have come upon the people, and have taught them how unreliable mere material good must be; that may be one occasional cause of this general feeling; but the secret cause is individual; it is the stirring of the individual consciousness in men and women, however awkward, which reveals to them their weakness in the presence of the strong trials and of the armed temptations of life. There is nothing absolutely amazing in such an awakening of the popular heart. The special feature of such a revival is merely the fresh evidence which it affords of the gregarious nature of war. There are times in the history of every one, however worldly his manner of life may be, when within himself the blind thrill of a vague revival is felt—when his old life suddenly appears to him in lineaments of shame, and the prospect of a new career flashes suddenly upon his brain.

A New Rose.

"From every blush that kindles in thy cheek,
Ten thousand little loves and graces spring
To revel in the roses."

"A rose by any other name, would smell as sweet"

BUT such a rose! oh such a flower! we would not have it come to us by any other name.

Bright and beautiful flowers are welcome, ever; welcome in days of prosperity or adversity; more welcome in adversity, for they are true, and true when all else is false. Welcome in sunshine, or in storm; most welcome in the hour when storms without shut from our gaze all that is bright and fair.

But there are times and seasons when there seems a beautiful and harmonious desire for the gift of flowers, when nature, as well as our own desires, and all attending circumstances, seem to turn the heart and mind to these fragrant offerings from the Deity. And such a time was the last Sabbath, in this, our city. Earth was putting on her lovely robe of living green, the sun was of a peculiar brightness, the air was fragrant as the breath of roses, and every heart felt joyous and happy. Thousands were gathered in our streets to enjoy this beautiful day, and from the city to all the famed places around, every thoroughfare was thronged. The steamers to Oakland went crowded; stages, coaches, and the 'busses were thronged, and every street and avenue was crowded by those who could not or did not wish to ride.

With little ones dear to us we strayed into many a garden spot, and gathered many a gem of nature's handiwork; but of one spot and one flower only have we now time to speak. We visited Sonntag's rose garden, and there reveled among these "queens of flowers." We feasted and were happy; but there was *one* rose that demands especial notice. Mr. Sonntag has been experimenting with the seed of roses, and has raised several hundred new seedlings—few only worthy of fame; one only *par excellence*, and that one truly worthy the fame of a thousand flowers. This rose is about the size of "Giant of Battles," a rich changeable violet and dark vermilion, superb cupped petals, perfect center, full up, the outside petals darkest, foliage fine; rose as fragrant as Davoniensis. As a Bourbon Rose it is without a superior, and having been requested to give it a name, we shall call it SONNTAG'S PERFECTION. It is worthy the name, and we hope it will reward this able and indefatigable rose-grower. We trust our citizens will become better acquainted with the gardens and flowers that so abound and beautify our city. Our day was a happy one, and we look for more.

More Facts for the Sowing Machine.

EDITORS FARMER: Having made a careful examination of the ground sowed to wheat by *Willard's Patent Seed-Sowing and Harrowing Machine*, and believing you would be gratified to know the result, allow me to state that I find the seed very evenly distributed over the ground; there is no appearance of streaks; all the seed appears to have come up, and, as you look across the piece, it looks very even, although sowed late, and being exposed to the ravages of the birds; yet it is looking finely, and surpasses anything heretofore seen in this State in grain sowing.

Yours resp'ly, W. S. BOARDMAN.

OAKLAND, April 12, 1858.

THE NEW SEED SOWER AND HARROW. We are pleased to announce that this most excellent agricultural implement, of which we have spoken in former numbers, and which was so very successfully tried at Oakland, is soon to be *manufactured in San Francisco;* thus saving the cost of manufacture to our own mechanics. Messrs. Hobbs, Gilmore & Co. have formed co-partnership with the patentee, Dr. Hewitt, and they have erected a fine building for the purpose. The names of Hobbs, Gilmore & Co. are a guarantee that the machines manufactured under their eyes will be No. 1.

BANKING HOUSE OF SATHER & CHURCH. The public announcement of the resumption of payment by this house, will be received with great satisfaction everywhere by their friends. Sather & Church pay in full, principal and interest; and it will be seen that our remarks on this house, in connection with the loss of the Flying Dutchman, in our number eleven, have proved true. The loss of that ship proved great gain to the house of Willetts & Co., who have also resumed in New York, with a capital of one million dollars.

FAVORS RECEIVED.—We have to return thanks to our kind friend W. R. Staples, Esq., Corresponding Secretary of the Rhode Island Society for the Encouragement of Domestic Industry, for the volume of their Transactions for the year '57. This work of about 150 pages, has been issued in a most creditable style, and furnishes valuable statistics of this little, but powerful State. We shall hereafter refer to the volume.

Messrs. Thorburn & Co., of New York, have sent us their *new Catalogues*, containing the best collection of new plants, seeds and bulbous roots, ever offered in New York. Those friends in our State who desire to import, cannot do better than to send to Messrs. Thorburn & Co.; they are a house that we can recommend as one of the very best supplied and most truly responsible.

We return thanks to Senator Gwin, for the Washington Globe and other papers and valuable Congressional documents; also to Hon. Messrs. McKibben, Scott and Broderick.

We return thanks to "Colfon," for the bag of peas, and his valuable letter. The one shall be used as desired, the other will be in print next week.

THANKS.—We are under many obligations to friends at Washington, for favors due us.

To Messrs. Gwin, Scott, McKibben, Broderick and Denver, for valuable documents. They have our grateful acknowledgments.

We received the Fifth Annual Report of the Mercantile Library of San Francisco; we shall refer to its valuable matter hereafter.

To Kohler, thanks for his music. See another column.

To some good soul, for a basket well filled with "good things" for the inner man. God bless them. They came in the right time.

B. K. Bliss, Esq., of Springfield, Mass., for Catalogues of his Seeds. We shall respond.

HOME MANUFACTURES.—Those who desire to know the value and beauty of some of our home manufactures, can do so by a visit to the warerooms and workshops of J. G. Clark & Co., on Washington street, where they can see as elegant furniture as can be found in the United States; they can see the workmen changing the rough wood into polished furniture, and as they see the many workingmen employed they will have the facts before them of so much money saved to our State, and scattered among the families of the men thus employed.

REVIVAL IN STOCKTON.—There is at the present time a series of religious meetings held in one of the Churches, at which all denominations meet for prayer and exhortation. It is characterized by great fervency of feeling, and a deep sense of religion is apparent and marked, not only at these meetings, but throughout the city; religion being the subject of converse among business men of all class in life.

John C. Fremont.

This distinguished Californian, whose name and early pioneer labors are so intimately connected with our State, came passenger in the Golden Age. He comes back most happily attended by his lady and children, and his niece. He has three children. The daughters and niece bear a marked resemblance to the mother; the son to the father. A happier group we rarely find. It was our happy privilege to be a passenger on the Stockton boat, the same evening Mr. F. and family were passing up river on their way to Mariposa.

No one, surely, will charge us with log-rolling or electioneering if we speak our mind respecting a citizen for whom we entertain a high reverence, even should that person have occupied the station of a political aspirant for office.

John C. Fremont is, and ever will be, connected with the history of the Golden State. His descriptions of our flower-crowned hills, and our beautiful valleys, are engraved upon our heart. When the ship that bore us to this new home was tossing upon the angry billows off Cape Horn, we lay in our berth and read and dreamed of the blooming prairies, such as mortal foot had never trod before. Fremont's Journal gave us an innate love for California that has never left us, and the esteem we then felt for him as a writer, and as a pioneer, has not diminished since; and when we met him surrounded by those ties that ennoble him, we honored him as a man.

Mrs. Fremont will be esteemed and honored, wherever known, as a true woman should be, as one who honors the name and glorifies the station of wife and mother; and the daughters, niece, and sons, in their deportment, add luster to her character, while they reflect it from their own.

With the family came J. T. Howard, Esq., and son, whose name is familiar in history as a builder of ocean steamers. Also, a son of Sir Charles Fox, a young gentleman of accomplished manners. Sir Charles' name is well known as being connected with the building of the Crystal Palace, London.

This happy group tarried one day at Stockton, and received much kindly greeting, and courteous attention. All were happy to meet them, and we can see that our State will be greatly the gainer by the acquisition of this estimable family, for we need all the influence we can have from the hand and heart of every true woman, that our State may become prosperous and happy in our homes. Most truly do we wish them health and happiness.

Calico Party at Stockton.—A very large party, under the *nom de plume* of calico, assembled at the City Hall, Stockton, on Wednesday evening last, for social enjoyment, in aid of the Seminary of Dr. and Mrs. Collins. There was a goodly party present. The ladies were dressed in this *fashionable* array with becoming taste, with smiles upon their features, indicating a joy at heart while thus uniting with their husbands and friends to promote a cause of education. We should suppose from the number present that substantial aid was rendered the Seminary, although not so many were present as was anticipated.

Copies of the Eclectic Review, London Quarterly, North Britsh, Blackwood (American editions), New Monthly and Harper's, came to us from the publishers, each full of gems of thought and treasures of knowledge. To each publisher we return thanks, and hope every family in our land will soon learn the value of such works to them.

Stockton Advertisers.—Messrs. Hewlet & Collins are now preparing a large stock of all the needed harvesting implements for the farmers of the San Joaquin country.

Messrs. Webster & Waite are always ready to receive their friends, and to offer them from their large stock of hardware, agricultural implements and other goods, liberal inducements for their patronage.

Mr. Jessie A. Austin invites all to see his new windmill, confident it is the best in the State, and the cheapest.

Wise Legislation.—The Legislature are awaking to the value of our great agricultural interest, and giving it their attention. We are pleased to notice bills for agricultural associations. This is well.

A Horticultural Monthly.—We are glad to notice by the prospectus received by us, the promise of a new aid to horticulture. We shall speak fully next week. Success to it.

The Oxygenated Bitters have no equal as a tonic medicine. They cure nervous debility, sick headache, acid stomach, waterbrash, loss of appetite, &c., all of which proceed from a weakened or deranged state of the stomach.

Austin's Patent Wooden Fan

WINDMILL.

THE undersigned has secured his PATENT for the NEW WINDMILL invented by him recently, and which by every test yet made, has proved to be most completely successful.

This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.

This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.

THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.

Any person of common ability can put them up, as directions for so doing go with them.

JESSIE A. AUSUIN,
PATENTEE,
STOCKTON, Cal.

N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. 11tj J. A. A.

Fine Stock for California.

The Golden Age brought to our State a valuable English draft horse of remarkable size, weighing 1900 pounds. This fine stallion is called "Young England's Glory," and was imported from Europe by Wm. Hood, Esq., of Sonoma, for the purpose of improving the stock of our State.

Mr. Hood has done much to improve the stock of California, and we hope all such efforts will be duly appreciated. We would hope that our Legislature might awake to the importance of this branch of our public interest, and, if possible, offer some bounties upon stock of remarkable worth and beauty, and also exempt all new stock from taxation, for a period of years.

Holloway's Pills and Ointment—*Caution.* To avoid purchasing pernicious counterfeits of Holloway's remedies which may be in the market, look narrowly to the water-mark in the book of directions. Unless the words "Holloway, New York and London," are discernible in semi-transparent letters, on holding the leaf to the light, the same is spurious.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box or pot.

A Rare Chance for Farming!!

SHERIFF'S SALE, TO FORECLOSE A MORTGAGE.

A RANCH

in Contra Costa county, near "Marsh's Landing" on the San Joaquin River,
WILL BE SOLD,
On SATURDAY, May 8th, at 12 o'clock, M.,—at Court-House Door, Martinez,

Formerly known as
"FULLER'S RANCH,"
situated on the banks of said river; six feet above the highest rise of water; contains about 350 acres, nearly all cultivated, and splendid Crops of Wheat, Barley, Rye, Indian-corn and Broom-corn, Vegetables, Fruit Trees (over 1000) of every variety, with many varieties of Grapes—nearly all in bearing condition. The whole Farm inclosed with a good picket-fence. Together with Dwelling-house, Farm-house, Store, Blacksmith-shop, Barns, Stables, Corrals, and other buildings.

Said Ranch has been under cultivation for the last five years, and is well calculated for raising early vegetables for market; including both wet and dry land; many parts of the upland heavily timbered; the dry land very warm and early; about 50 acres meadow, a part of which is under cultivation, and can be all irrigated or overflown by hoisting a gate, and drained by closing.

The location is altogether one of the pleasantest, healthiest, and most desirable situations in the country, either for Farming or Stock Raising, being well watered and a large range of unoccupied land adjoining it.

Titles perfectly satisfactory. Day of sale will be given next week.

Address, or inquire at Office California Farmer.

[Sac. Union, and Stockton Republican, please copy, and send bill to this office.]

PAINTS, OILS and WINDOW GLASS DEPOT.

OLIVER & BUCKLEY

HAVE NOW LANDING, AND IN STORE—
4,700 boxes WINDOW GLASS, assorted sizes;
150 boxes STAINED and GROUND GLASS, assorted colors;
2,500 gals. VARNISHES, Tilden & Nephew's;
doz. Paint and Whitewash BRUSHES, Adams';
Together with the largest stock of PAINTS, OILS, &c., &c. in the State, which we offer for sale at lowest rates, at
86 and 88 Washington street,
9 87 and 89 Oregon street.

Wanted,

A SITUATION AS FARMER AND GARDENER,

By a Man who perfectly understands his business in each department—the Growing of Root Crops, Grains, &c., according to the best systems of Agriculture; the Reclaiming of Waste Lands, Underdraining, and the Working of all Agricultural Machinery, the buying and selling of stock, and all agricultural produce; has had good experience in raising blood stock, keeping farm accounts, &c.

Gardening in all its various branches; forcing of fruits, the management of fruit, flower and kitchen-garden, the erecting of agricultural and horticultural buildings, laying out of new grounds, the entire routine of Orchards and Vineyards, has conducted Market Gardening extensively; also the Dairy Business.

The best of reference can be given as to capability and moral character. Has had eleven years' experience in the States, managing first-class places. Letters addressed to Mr. Warren, editor of the Farmer, will be attended to. 11-1m

---

Landscape Gardener.

THE undersigned offers his services as a Landscape Gardener. Designs made for Parks, Lawns, Carriage Drives, and fine Garden Plats, in the latest style of Gardening, for city or country.

The advertiser is permitted to refer to Editors of Farmer where letters can be left for him by those that wish his services. J. TAYLOR,
5 corner Stockton and Sacramento streets.

To Let, With Board,

ONE SUITE OF FOUR ROOMS, suitable for a Family—in VIRGINIA BLOCK, corner of Stockton and Pacific streets. Possession given immediately.
12 References exchanged.

SPECIAL NOTICES.

☞ HOUSEKEEPER WANTED.—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.

The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.

A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings two numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing: a Vineyard loaded with promised fruit: a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).

Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.

All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14tf

---

☞ THORBURN'S Preliminary Wholesale CATALOGUE OF VEGETABLE SEEDS, *of the present year's growth*, will be published on the 20TH JULY, and will be mailed to Dealers and others requiring Seeds in quantities, inclosing stamps for return postage.

J. M. THORBURN & CO.,
19-4 15 John street, New York.

☞ Wigs! Wigs!! Wigs!!! — BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.

v8-13 1y 233 Broadway, New York.

☞ A. W. FABER'S LEAD PENCILS.—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not failed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FAUER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York." E. FABER, Sole Agent
v9-1 6m 133 William street, New York.

☞ Farm Stock.—Having completed our arrangements for the importation of choice stock, we are now prepared to receive orders for any of the following breeds, and would call the attention of those in want, to our unsurpassed facilities for the importation and improvement of the choicest stock:

Thorough-bred Devon Cattle,	French Merino	do
Shorthorns do	Spanish do	do
Thorough-bred Ayrshire do	Cotswold do	do
Suffolk and Essex Pigs.	Chester White Hogs.	

Fancy Fowls—all the best varieties.

All communications addressed to us will receive immediate attention, and we shall be happy to correspond with any and all upon the subject. Address
2 WARREN & CO., Cal Farmer Office.

☞ REGISTRY OF STOCK.—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.

☞ A Syllogism:—

Proposition 1st.

Every Lady and Gentleman desires a beautiful head of Hair.

Proposition 2d.

The use of LYON'S KATHAIRON, will, without fail, produce such an one.

Therefore:

Every Lady and Gentleman will, of course, immediately commence using Lyon's Kathairon. All pronounce the Kathairon to be the finest and most agreeable preparation for the Hair ever made.

Its immense sale—nearly 1,000,000 bottles per year—attests its universal popularity. Sold everywhere for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
11 1m *San Francisco, California.*

☞ Efficacy of the Oxygenated Bitters.—From J. C. Dunn, Esq., late City Treasurer:

Boston, June 6, 1852.

Gentlemen: I have been for some years troubled occasionally with severe attacks of indigestion; have consulted many physicians, tried Allopathy and Homeopathy, and can truly say I have received more speedy and effectual relief from the use of the *Oxygenated Bitters*, procured from you, *than from all others remedies*, and most cheerfully recommend them to all who suffer from a similar affliction.

Yours truly, JAMES C. DUNN.

Numerous certificates have been received from citizens of the highest respectability. Every dyspeptic will be amply repaid for a trial of this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. Morrill, cor. Third and K, sts., Sacramento; H. Johnson & Co., Washington st., San Francisco. 9-1m

---

☞ HAIR DYE! HAIR DYE!! HAIR DYE!!!

Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

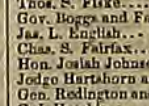
WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of
WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

HOTEL
INTERNATIONAL.
San Francisco, California.



THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present Lessee and Managers,

A. S. HALEY,

JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

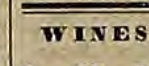
FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most POPULAR PLACES OF AMUSEMENT, THE PRINCIPAL THOROUGHFARES, THE FASHIONABLE PROMENADES, AND STEAMBOAT LANDINGS; thus rendering it at all times the most

DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen, during their sojourn in this city.



THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, Lessee.

Assisted by: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

A CHANGE IN THE HOUSEHOLD.

Once there was no prattling
In our home, nor rattling,
  And one could hear one speak;
Now in place of quiet,
There is hubbub and riot,
  Every day in the week.

Little tongues are chattering,
Little feet are pattering,
  Soon as the birds do sing;
The front room and entry,
The back room and pantry,
  With mirth and frolic ring.

Go into the garret,
There you will find them at
  Mischief, but in excellent glee!
Dressed in mama's dresses,
Hoops and all the witches,
  Playing at "come to see."

Go into the kitchen,
There you find them fixing,
  A lightsome foam with care;
And I love to peep at them,
With papa's new meerschaum,
  Blowing bubbles in the air.

At evening, all weary,
They come very near me,
  And I know they would sleep;
And my heart rejoices
To hear their sweet voices
  In prayer, ere they sleep.

Flaxen hair and curly,
Shining teeth and pearly,
  Hazel eyes and bright;
Lovely they and gentle,
Physical and mental,
  To our house a light.

I'd rather have the prattling,
And the tumult and the rattling,
  Of this breaking out of life,
Than the old household quiet;
Yes, rather these and riot,
  And so confesses wife.

A. J. U.

TO A STAR.

No star, in yonder sky that shines,
  Can light like woman's eye impart;
The earth holds not, in all its mines,
  A gem so rich as woman's heart.

And woman's love's a holy light,
  That brighter, brighter shines for aye;
Years cannot dim its radiance bright,
  Nor even falsehood quench its ray.

But like the star of Bethlehem
  Of old, to Israel's shepherds given,
It marshals with its steady flame,
  The erring soul of man to heaven.

The Elevation of Woman.

The following communication from our most esteemed correspondent, we trust will receive the attention it merits. The great cloud now resting upon human hearts and human happiness, can easily be traced to the source of the evil which has been so truthfully and feelingly delineated. We rejoice we have such earnest spirits to labor in so glorious a work as the one to which our H. E. S. gives her mind. We trust we shall hear often from her and those who labor with her.

Bear River, April 2, 1858.

Editors Farmer: As I have a few moments to spare, I thought the time should be spent in writing to the Farmer; but the question arises, what shall be the subject? for you have so many correspondents that can wield the pen as if by magic; and when I read their wise and mighty sentiments, which are sent forth for benefit and pleasure to those who read the Farmer, I very often believe that I receive more pleasure and instruction whilst reading the thoughts of others, than in writing my own. Yet, when reading and contemplating the many truths which my sisters have sent forth to the world, my soul takes and partakes of their thoughts and sentiments, and I feel like joining with them in the great and good purpose, by casting our influence on the right side, namely, in trying to raise and comfort the disconsolate spirits and broken-hearted of our sex. This praiseworthy and noble object has called forth the talent and glorious sentiment of many noble minds; and in what part of the world can it be more necessary to fly to the rescue, than here, in our own delightful and beautiful State. Oh woman! how many times has my heart yearned over thy sorrows; how many wrongs hast thou suffered, and how many false steps hast thou taken on account of the dependent situation in which thou hast been placed. When we study cause and effect, we cannot but perceive what has chiefly been the cause. With but a few exceptions, woman has not been properly educated; but have not those few proved how much she can accomplish when placed in her right position? I know many will say that woman is not man's equal. Although many poets and admirers of woman have sung and spoken of her as being an angel, still custom and education have not placed her as an equal with her brother man. But man being physically stronger, has made laws, and by those laws woman has been governed and protected as a weak and defenceless associate. Man has decreed her situation and sphere; she works amid the day of small things, cooking and washing, with the contracted duties of a family, receiving company, with a thousand other demands upon her time and patience. This is woman's circumscribed sphere of life, with but few exceptions. In many instances, she is flattered with unmeaning words, telling her that she is an angel or divinity, making her the plaything of fancy. The history of woman has been a history of struggles; but long years of suffering have at last divulged to woman her powers and her constitutional natural right to the pursuit of happiness.

I do not wish to speak against woman performing her duties in domestic life, when she is not denied other and more important achievements. There are many intellectual pursuits for which she is qualified. No one who is familiar with the true history of woman, can remain skeptic in regard to her constitutional capability to compete with man in some of the higher departments of mental attainments. I rejoice that of late years a stand has been taken. The progress of scientific discovery, and the power of the press have done much to develop her ideas of her own nature, teaching her a clearer understanding of its physical and spiritual wants. Women are now being educated with a vigorous and physical education, which will develop both mind and body. There are many employments and professions to which she is adapted. Who is so well qualified to administer the healing draught of medicine to the sick and wounded, as the educated and enlightened woman. She has already proved by the intuition and experience of her woman nature, that she can successfully demonstrate her superiority. It is sometimes said that she has more curiosity than man; that she is more communicative, and these are employed to the disadvantage of society. There may be truth in the assertion; but I think if woman was properly employed, her attractions would result in peace on earth, and she would not have to struggle as thousands do, working at her needle for hours and days together, denied the healthy exercise that is necessary for the physical system; while many young men, who have not yet arrived at manhood, are daily expending their hours of ability over a trifling employment. Scores of them can be seen standing at the store doors in cities, slumbering uselessly in the shade, usurping the rightful occupation of woman, while the voice of reason is calling them forth to manly exercise, and with their noble manhood to advance the science of agriculture. It is a sad waste of manly power.

If woman had employment that would meet her an equitable reward, how many unhappy and discordant marriages might be avoided. But the young woman is alone in the world. Father, mother, all are gone; she toils unceasingly, and oftimes meets with failure. She beholds her brother succeed with but one-half the exertions and frugality that she has made; she becomes discouraged, and flies to the refuge of legal marriage; not the true marriage of the heart; but she yearns for a home, she seeks a rock of safety. But even then she is led to feel her dependence. Her natural and educational training leads her to see that she cannot compete with the one she has bartered her love for. The reason is the marriage was not contemplated for each others elevation and happiness, hence come the causes of connubial discord, with all its accompanying evils; the beautiful and harmonious institution of marriage-law is degraded by selfish purposes, and thus the boundless and sacred love of the soul becomes tempest-tossed and wrecked upon the shoals of distress and separation. How many there are in our midst, who, at this moment, are repining at their hard fate as they call it, who, if they had been wisely educated by their parents, or those who had the charge of their childhood, would now have been ornaments to society, fulfilling the beautiful mission of nature's laws.

It is true, and I write it with grief, that with all the amount of suffering which woman has undergone, she oftimes is, as Mary Glen truthfully writes, her own foe, or woman's worst foe. She is oftimes found opposing her best interests, and is so far led by public opinion as to profess a preference for the popular decisions of foolish custom. Truly is the sorrow of the lone woman portrayed in the Farmer of the 19th ult., written by Mary Glen. No doubt her lone heart has been made to bleed from that most cruel of all scourges, a woman's tongue. As regards my own experience, the world has been kind to me; but little of its bitterness has fallen to my lot. But, how many times has my heart bled for my dearest friends. It has fallen to my lot to cast the shield of protection around many of my disconsolate sex. But I rejoice that the day of evil things is gliding into the distance, and the day of redemption is at hand, when woman shall stand forth in her true dignity, ever taking the side of justice, and leading the distressed and care-worn sister to the Eden of love and repose. Many good and intelligent minds are already looking forward with anxious hopes to that glorious era. Then will the redemption of universal love and harmony take place, and future generations will spread truth and knowledge all through the universe of God's empire. When every man and woman will be made the possessor of wisdom, harmony and truth, then will parents teach their children useful and intellectual knowledge, instead of the superficial, so-called accomplishments of the present day; then will many hearts be made glad, while the greatest wish, desire, and happiness of your humble correspondent will be accomplished. Your respectfully,

H. E. S.

[For the California Farmer.]

Tears of Sympathy in a Graveyard.

Rambling about Sacramento, one day last week, some unaccountable feeling directed my steps towards the graveyard on the Sutter road. I passed through the side-door near the arched entrance to the resting place of the dead. In passing through, I felt a cold shudder pass through my frame, like a shock of electricity. I felt my heart swell, and an involuntary sob burst from my lips. It appalled me for the instant, and I exclaimed, within my mind, can this be the messenger from the dread angel, to bid me prepare for his summons? or is some loved one of my heart departed? I am not superstitious, or in ill health, or nervous; nor do I have spasms that ladies are addicted to. I am inclined to philosophize on all the natural or unnatural events in life. I am said to possess, by my friends, much calmness and presence of mind in danger, or any trying scene; yet, although startled by this involuntary sobbing, I do not dread death. I look upon the parting of the soul and body as a happy release when the mind is once free to soar with the eagle's ambition to the sun, and feel that its swift wings are free from earthly contamination. I passed to the first grave with my heart full of swift gathered sadness. My eyes rested on the gravestone of him who lay beneath. The name I read: it proved to be that of an old friend. He was a fireman. And he to lay there in the prime of manhood! I thought of the many kind words that had passed between us; the many little acts of kindness, on his part, when I came a stranger to this land, and he so kind and noble, and so beloved by all; and yet he was laying there. I did not sorrow for him, for I knew that his bright mind was with kindred spirits, and he, in his congenial sphere, tasted the sweet nectar of pure happiness, that is denied us here. The little plot of ground, wherein he rested, showed the appreciation of him by those friends who loved him on earth. How much real poetry there is in cultivating flowers and plants over the graves of our departed friends. Flowers speak to the heart; they are like children's little earnest prattle—both holy and pure—Nature's pure eloquence; impressing holy and heavenly thoughts upon your hearts without an effort.

I soon came to the grave where poor Charley King lay. His daguerreotype looked so natural, with a very pleasant smile, I could scarcely imagine he was gone. The wreath of cedar that hung upon his monument was faded, like the bright hopes his friends entertained for him; that he would long be with them, to cheer them with his social and gentlemanly qualities. But alas! he is gone, and his name, like a bright halo, brings pleasant memories. Peace to thee "Charley," for a kinder or truer-hearted soul never breathed. On earth thou didst much good; many a lonely heart thou hast cheered, and bid them hope; thou hast thy reward in Heaven.

One little grave inclosed, a few steps beyond, attracted my attention. I read the name. Who can judge of the strength and devotion of a mother's love? How many tears have been shed over that little mound, strewn by the hands of love with wild flowers; yet still the mother weeps on. That little spot is holy ground to the disconsolate mother. Every Sunday, for more than a year, in summer's heat, or winter's rain, you will see that mother kneeling and weeping there. Be cheered, sad-hearted mother! your little one is with God.

One other monument was there, erected over the form of a devoted and loving wife, who died from consumption. The monument and railing had been placed there at some considerable expense; but where was the hand of love, to clear away from the solitary rose-bush the weeds and grass that stopped its growth? From that neglected grave a voice came forth: "Oh sister spirit, thou dost sympathize with all those who are neglected or oppressed. Thou art a kindred spirit with me, and to thee I will speak. Thou wilt find him who hast forgotten me, in the busy haunts of men, passing, before the world, as a good and honorable man; yet his soul (although he is independent as far as money and the world's goods go) is wedded to mammon. To you I confide the charge of rousing him from his selfishness. He must soon join me, and he cannot bring his money, nor his houses with him. He has the means to make many hearts glad. The currency in our bright sphere does not ring with a metallic sound; yet there is music in it, thankful hymns of praise to the great Deity, mutual kindness between immortal minds, too bright and holy for mortals to comprehend. Yet, in sympathy, we glide round the friends we love, or those that are forsaken and in despair, and send a stream of hope and gladness to the heart. At these words, I felt again the sob and electric shock, or chill, pass through my frame. "Sister, I see that thy sympathy will soon be called upon, and I will only detain you a few moments more. Tell him to think of the poor, the widow, and the orphan, and hoard his wealth no more. Farewell." I listened, but I heard the voice no more, and, with a slow step and reverential feeling, passed along. Oh men, didst thou but know the true and faithful heart of woman! how, even in death, thou art not forgotten, thou wouldst throw aside the vanities of life, and cling with a noble fondness to the woman that loves you.

As I approached the gate to pass out I saw a procession approaching. With respect, I stepped from the gravel walk to let it pass by. It was a small mahogany coffin, borne by two men. Next came, as I supposed, the mother. She was clad in black; a Spanish woman of the better class. The procession was most respectable; I saw many in it whom I knew; but the bereaved mother, and her deep grief, alone attracted my attention. She was a stranger to me, yet I heard from her lips the same sob that came from mine a few moments before. They passed on, and so did I, and with this strange sympathy in my heart to this unknown woman, in her sorrow, I shed tears till I reached my home. Oh, how my heart yearned to that desolate mother! Had she been alone, and uncared for, I would have sought her to have poured words of comfort to her heart; but there was not one in that procession that felt or sympathized so deeply her grief as I did. No one, but she who has been or is a mother, can feel the great loss of a beloved child. I thought of that little form, so dearly cherished, and with what pride the mother's eye rested upon it when in health; to be shut out from her view by the cold, damp earth, and the mother returning to the house where, a few days before, its little voice rang in gladness; to hear that little voice no more. Only through a heated imagination, in the silent hour of night, to be startled from her sleep, thinking she heard the word "mama," and find that the dear one is forever gone; to see a little toy, or plaything, or article of dress, or tiny shoe, a little frock, a lock of hair; these little things are sacred relics to the fond mother. How safely they are treasured; how carefully put under lock and key; how often taken from their resting place, kissed, wept over, talked to, and safely put away for the next day, to be wept over again. Let no one despise a mother's love, however lowly and poor she may be! for it is a spring of ever gushing tenderness. Oh, speak kindly to the worn mother, for she deserves all the respect that is in our power to show. She bears all the pains, all the sleepless nights, and hardships during the day for her child. In sickness, how gentle and kind her voice; how soft and kindly she raises the aching head, and smooths and turns the heated pillow; how cool her hand upon the feverish brow; how anxious to make each little change for the better; how often the prayer is sent up to Heaven, for the recovery of her darling child; how wide awake, through the long night, for fear that the darling of her heart will not have every attention, and, when health returns, who so happy, so grateful as that "dear mother?" She feels no weariness; she has strength given her from unseen hands. In the triumphs of manhood and joys of youth who feels so proud and happy as the mother? When reverses come, and sorrow's clouds enfold you round, who so constant, so sympatizing, and consoling as "poor mother?" She is the first to nourish and to care for you; and when grim death summons you to meet him, who but "dear mother" leans over you, to wipe the clammy sweat of death from your brow, to catch your last word, to gently close your eyes in death? "Mother"—it is a dear and holy name. Mother: she is our truest friend on earth. Let no one despise their mother; but honor and cherish her, and treat her with deferential respect. It is her due. How often have I heard people say: "Oh, if I had but listened to my mother's voice, I should not have fallen into this misery. Oh, son! oh, daughter! obey your mother's voice, for you will find a well-spring of gushing tenderness, when all looks drear and dark. It is the oasis in the desert of life. Oh, children, obey your mothers implicitly. Think of all they have suffered for you, and with pleasant words and gentle actions lighten their pathway to the tomb. And do not forget thy mother, though she die and leave thee; but with filial tears water her grave, and strew sweet flowers over her lowly resting place, and the tears thou dost shed will be wafted, by sympathizing angels, to plead for thee at the Throne of Grace.

Mary Glen.

Woman's Privilege.

We are most happy to concede the opportunity for our valued correspondent from Oak Shade, to give utterance to her thoughts, for we know great good will result from it. We need an interchange of thought upon all the duties of life, and more especially upon the themes named by the writer; for it is by such free communication of thoughts, one mind with another, that great truths are elicited. We shall look with much interest for the promised letters upon "Home in the Country," as connected with children. The right education of the *young*, is the mighty theme, now, and we rejoice in the hope that it is receiving a just share of attention. Upon Home, Education, and Children, it is the privilege and duty of woman to think, speak and write, and we most cordially yield this privilege to our correspondent, with much pleasure:

Oak-Shade Farm,
Santa Clara county, April 11th, 1858.

Editors Farmer: Will you allow me the privilege of a friend in having a little chat with you and others, through the medium of your valuable paper, as I am here without the privilege of conversation, except that of a very limited character? We left the city about a year ago, for a home in the country, where there is so much to interest the heart, and also the hand of a thinking individual. This day, the blessed of the seven, consecrated for the rest of man and beast, is calm as an evening breeze laden with the delicious fragrance of fruit flowers yet in bloom; the earth all around clad in her beautiful garment of green, bespangled with clusters of tiny bright-hued flowers; how beautiful they are, meek little messengers of beauty to the heart of mortals. They come forth in their loveliness, as some individuals on our earth have, only to be crushed by the wayside, shed their fragrance, cheer the eye of those who love the beautiful, and pass away to be succeeded by others destined to the same humble mission on our earth. How often have I had a feast for the heart, full of beauty and sweetness, after gathering a handful of those humble flowers in my pathway. I have seated myself, with a small magnifying glass, and examined them, one by one, beholding all their hidden loveliness. How I delight to entertain a child, or children, in this way, calling their attention to the invisible beauty of different flowers.

Near where I am seated stand venerable Oaks; to how many throbbing heads have they afforded comfort and rest, who have sought their friendly shade, in summer, who can tell? There is much in the life of one living in the country elicited or brought forth in the mind, calculated to benefit and bless, were our ideas only cast upon the passing breeze of time in expression, that they might have life. How often, since I came to this place, have I been forced to wish for some one, that I might converse freely with, especially some one of my own sex. I retire at night often, with ideas of beauty, usefulness, and truth, which some occurrence of the day has stamped upon the mind; and O how I have then thirsted for an interchange of thought with others of the human family. But I must not say too much at this time; perhaps there is little in all I may say to interest any one.

If I should talk with you again, friend Farmer, I will say something relative to the difference in the life of a very plain woman living in the country, as contrasted with her life in San Francisco; her estimate of a home in the country, its blessings in connection with children; also a few observations about children. Thanks for previous kind notice, and believe me, sir, a friend.

N. B. H.

[For the California Farmer.]

I Wished I Were a Man.

In early days, when life lay bright before me, I wished I were a man. When in my joyous girlhood I looked about and faintly realized how circumscribed the lot of woman, my childish heart rebelled, and I wished I were a man.

And when my father's much-loved form was carried forth to "the house appointed for all living," and I saw my mother gaze hopelessly upon her four young girls, bh then, I wished I were a man!

In after years, when he, my early choice, my heart's idol, was called away to the spirit-home, and I was left *alone*, save one tiny pledge of love that nestled on my bosom; when business, the detail of which I was wholly unacquainted with, was settled by *friends*, and they brought me word that *all* my husband's property was scarce sufficient to cover the expense of *settling* it; then the wish which had lain burning at my heart in former years, returned with tenfold force, again I wished *I were a man.*

When driven from the home which I had vainly hoped would be spared me, with my babe clinging to my breast, I realized, for the first time, that I must earn my own bread, and with that thought came the conviction of my own helplessness; what wonder that I wished I were a man.

When I sought, in every every avenue allowed to woman, for employment, and found that men were milliners, that men measured the ribbon and the tape, that men served the coffee and the cake, that they held alike the distaff, the spindle and the pen, and there was no room for *woman*, no room for *me*, the old wish had curdled at my heart; but my child had sobbed herself supperless to sleep, and in helpless wrath I wished I were a *man.*

In after days, when my skies were less cloudy, for I had shirts to make, for which my *generous* employer gave me a "bit each," my child had bread, and I had peace of mind, I met some of my own sex, who, in brighter days, had proudly called me friend; I started forward, but they turned aside, and I saw the contemptuous shrug of the shoulder, as I heard the whispered "she sews for a living;" I stamped the earth, and wished *I were a man!*

When crushed, and well-nigh broken-hearted, I turned for sympathy and counsel to woman, and learned, with bitterness of heart, that a woman's foes are those of her own sex, despairingly I wished I were a man.

But never again shall that wish escape my lips; for *now* men wage war against *woman;* descend from the high position to which they were created; lay aside the image of the God who made them; cast away the attributes of manliness and humanity, and descend to war upon woman with weapons of *jealousy, untruthfulness,* and *shame.* Hush! what do I hear! Having made this sacrifice, are they yet men? *Men* ever wear the image of the God who made them.

Sister.

San Francisco, April 13, 1858.

EDUCATIONAL.

The Collegiate Institute at Benicia, Cal.

The School Year at this Institution, is divided into two terms of five months each. The Sessions will open on the 4th of January and the 5th of July; closing on the 4th of June and December.

To the Patrons of the Institute we would say, that the facilities for obtaining a good education have been much increased this year. The range of studies will be ample, embracing the Ancient and Modern Languages, and a thorough course in the Physical Sciences. Neither are the accomplishments overlooked: in Piano and Vocal Music, we have the best Teachers in the State Thoroughness in the Elementary Branches, before advancing into the higher studies, will be a primary requirement. We shall continue to follow, in our government, school arrangements and method of instruction, the Normal School or Prussian system, which has been adopted in the Eastern States with so much success.

Pupils will be fitted for the University, or will be trained with a view to the completion of their education in this School, as may be requested by the parents. Where no special directions are given, the course of the Institution will regard the Modern Languages, Natural Sciences and Practical Avocations of life, as the sine qua non of a good education, and the Ancient Languages as accomplishments.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location of the School is easy of access from all parts of the State; the buildings are excellent; and the quietness and healthfulness of the village are unsurpassed by any place on the Pacific.

TERMS, PAYABLE QUARTERLY IN ADVANCE:

	PER MONTH.
Tuition in the Higher English Studies (including Natural Philosophy, Chemistry, Algebra, Geometry, &c.,-	$ 8 00
Theory of Surveying (including Linear and Linear Perspective Draughting)	5 00

STOCKTON FEMALE SEMINARY.

The First Session of this Institution will commence on Monday, March 1, 1858, and continue five months, under the charge of Dr. C. Collins and Lady, assisted by competent instructors.

FEMALE INSTITUTE.

The Female Institute in Santa Clara, under the management of James Rogers, A. M., still enjoys a good degree of prosperity. The Board of Instruction is ample, and the Terms of Tuition as liberal as in any school of equal grade in the State.

Vance's Branch.—New Gallery.

AMBROTYPES, PHOTOGRAPHS, Daguerreotypes and Melainotypes.

VANCE & CO.,
Corner of Third and J streets,
(Hiller & Andrews' Building) SACRAMENTO,

Having fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerreotypes** and **Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all to *Call and Secure Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE,

Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots or Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

MACHINES AND IMPLEMENTS.

TREADWELL & CO.,

IMPORTERS,

N. E. corner California and Battery streets, SAN FRANCISCO,

have now landing, and will receive by every packet from New York and Boston, the most extensive assortment of

FARMING MACHINERY

and Implements,

ever brought to this market, embracing all the

Latest Styles and Improvements,

which will be sold at lowest rates.....consisting in part of:

REAPERS:

MANNY'S COMBINED REAPER AND MOWER, WITH WOOD'S IMPROVEMENT..These justly celebrated Machines have become too well known in California to require more than a simple announcement where they can be had. We are sole agents for the Pacific coast, and none genuine elsewhere.

McCORMICK'S REAPER....This universally approved Reaper we keep constantly on hand, and are Agents of the Maker.

KETCHUM'S COMBINED REAPER AND MOWER....This Machine is now very popular—having been greatly improved the last two years.

BURRALL'S IMPROVED GRAIN REAPER. This Reaper cuts six feet, and is one of the strongest and most durable Machines in use.

SEYMOUR AND MORGAN'S REAPER; without the Raker attachment and all late improvements.

HUSSEY'S REAPER....Baltimore make.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.
BOGARDUS' 2, 4, and 6 horse do do.
FIELDS' 2, 4, and 6 do do do.
EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times. Extra points and parts can always be had.

This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.
Do. CUTTERS—Several sizes and kinds; hand and power.
HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.
GRANT'S GRAIN CRADLES—In cases of one dozen each.

Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c, &c. 9v-4

Letter from New York.

NEW YORK, March 20, 1858.

RECOVERING FROM THE PANIC.

EDITORS FARMER: The steamer days crowd upon each other so closely that one hardly has time to look for news, except what is directly brought before him in the ordinary course of events. In glancing over the papers for the last two weeks, there may be seen much that cheers every true heart. The result of industry, energy and perseverance, are being brought out from time to time, showing conclusively that the masses are capable of working wonders when acting in harmonious concert. A few months since the money panic was abroad in the land, and many seemed to fear our country was on the very brink of ruin. The fact was simply that we owed more than we could pay in ready cash, in some few instances. But there was more wealth in the country than ever before, and only needed some great occasion to bring it out, and the panic has done it. The farmers brought their surplus produce to market, thus disclosing the immense agricultural resources of the country. The wheat and corn crops were found to have been very large; the cotton crop was most abundant, and in Louisiana alone, the sugar crop was from 150 to 175,000 hogsheads more in 1857 than in '56. So with many other kinds of produce, and articles of manufacture. All needed money, and much of the real wealth of the country was by this pressure brought to light. The panic then has been beneficial in bringing out more prominently the true strength of the country. The masses are satisfied that the country can take care of itself, and help along the poor old hacks of politicians *amazingly*. Hence the industrial classes are generally pursuing their various avocations, happy and contented.

The politicians are most generally *log-rolling*, tinkering up Kansas, and fixing things generally, so far as they can, to suit their respective parties in President-making hereafter. They work hard for the good of their—pockets, to be sure. While Congress is in such an agony about "poor Kansas," her people are breaking up their fallow grounds, fencing and preparing their lands for the seed in its time; and making their homes as comfortable and cheerful as possible. In this they act like men and women of sense.

It is well that money panics, congressional apathy and stupidity cannot ruin the country, divide the Union, or stop the growth of sugar, grain or cotton.

KANSAS

Will undoubtedly come into the Union a free State. Even the most prominent men of the South are opposed to *forcing* upon her the Lecompton fraud, as they call it. Thus far the Administration has been beaten at every step. The vote will be taken on the question early next week, and be decided probably before the next steamer leaves. As yet little has been done in Congress of much moment. Two or three bills only of great importance having been passed, one of which is the *resolution* of Senator Gwin, to *inquire* into the recent murder of California emigrants upon the plains.

THE SPRING

Has opened early and finely. The farmers are beginning to plow their fields. It is said that there will be a much larger extent of ground planted the present year than for some time past. If we can raise our own bread, and supply from our own soil, with our own labor, all that we really need for health, comfort and happiness, we need not care a fig about politics except to vote, or whether Napoleon's boy learns to walk with a patent *yankee* baby-jumper, or *takes* it in the natural way like other children.

The heavy rains and melting snows have caused many streams in the West and North to overflow, in some instances doing considerable damage.

UTAH

And her gloomy future is beginning to excite the grave attention of all classes of our citizens. Unless her rulers recede from the high tone and defiant manner they have assumed, there will be trouble. Her darkened horizon is thickly studded with the fearful portents of war, not with a foreign foe, but with their own countrymen and brothers: yet it must be so. Rebellion must not be permitted to rear its brazen front within our dominion

MEXICO

Is even more unhappy than Kansas. She has no Union to go into or out of, or any party strong enough to grasp the reins of power and control the stormy elements that are interminably contending and clashing beneath her sunny sky. Her difficulty with Spain has been adjusted for the present.

THE RELIGIOUS INTEREST

Is spreading through the whole city, and as widely and deeply in other cities as here. Fifteen or twenty of our largest churches are open daily from 12 M to 1 PM; some from 8 to 9 AM; some from 4 to 5 PM; all of which are thronged with all classes. In the most busy and bustling streets, from 12 to 1 PM, it is nearly impossible to get near the places opened. Even Burton's old Theatre in Chambers street, has been rented for the purpose of holding a daily prayer meeting. This is the third day it has been opened; the first day eight hundred were present; yesterday every standing place, from pit to dome, was crowded, by from 2500 to 3000 persons; besides three or four churches being open at the same time within three or four blocks. The attendants are mostly young men. Nearly every day we hear of another and yet another church being opened for prayer. In Philadelphia, Baltimore, Pittsburg, Cincinnati and Boston, meetings are held at the same hours. Telegraphs are constantly passing along the wires between those cities. The attendance and interest in the New York meetings are communicated to the above cities and others, and read in the respective churches; and so of the others to this city. It is greatly to be hoped the results of this great work may be permanently beneficial to all parties.

BUSINESS

In the city and country is gradually improving, and it is said that in no former time has business been in a more healthy and sound condition than at present, and all look forward to a long career of commercial health and prosperity. Our markets are well supplied with the necessaries and luxuries of life, money is plenty, the general health of city and country good, and peace, prosperity and happiness seem to be in store for the masses of our people.

I have just cut two articles from the Daily Times of this morning, on the great religious awakening in our country, which will give you some idea of the deep feeling pervading the whole community. The daily and weekly press abound in similar articles.

FROM EUROPE

The news is interesting and important. The Earl of Derby, the new Premier, has defined his policy, which in the main is pretty much like that of the late Minister. He proposes to modify the India bill, which may lead to important results. The Minister of Foreign Affairs has replied to Count Walewski's Dispatch, giving him to understand that England will preserve the right of asylum intact, under all circumstances. Preparations are making to lay the Atlantic cable at an early day, if they succeed as they hope to do.

IN FRANCE

The trials of the conspirators is closed. Three have been condemned to death, and one banished for life to a penal colony. The public mind there is an excited and feverish state. There is no knowing how soon matters may be worse than they are now. The Emperor is losing the hold he has had upon the public heart. Breakers are ahead; perils are thickly clustering around him.

FROM INDIA

We learn that the Commander, Sir Colin Campbell, is making preparations for invading Oude, that he may make a decisive blow; but the rebels are gathering in large force at other points. There may yet be a long and bloody struggle.

FROM JAPAN

We are pleased to learn that the ports of the whole empire are to be thrown open to the commerce of the world. If so, it will be one of the most important events in the century.

CANTON

Is in the hands of the French and English, and the Imperial Governor is their prisoner. Time will show the result of this war, and teach the denizens of the Flowery land if this war fails to do so, that they must have some respect for mortals dwelling outside of the kingdom of Confucius.

But I must stop. B.

WHEELER & WILSON MANUFACTURING COMPANY'S

SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stitches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them

H. C. HAYDEN, AGENT,
157 Sacramento street
9v-7 3m (between Montgomery and Kearny)

JOHN D. ARTHUR,

INVITE attention to the following Certificates from GRASS VALLEY:

NEW-ENGLAND QUARTZ LEAD, Dec. 23, 1857.

W. LOUTZENHEISER, Agent of Stanford Brothers, Pacific Oil and Camphene Works:

Dear Sir: I have now given those Oils from Stanford Brothers, which I purchased from you, a fair trial, and find them the VERY BEST I have ever used.

Z. WHEELER, Superintendent.

ALISON RANCH, Dec. 23, 1857

This is to certify, that we have been using the Oils from Stanford Brothers Pacific Oil and Camphene works, for a long time, and find them of a superior quality.

JOHN ANDERSON, First Engineer.

ALTA HILL, Jan. 12, 1858.

I hereby certify, that we are now using on our Machinery, Oils manufactured by Stanford Brothers' Pacific Oil and Camphene works, purchased at their Agency in Grass Valley, and have no hesitation in saying I believe them to be superior to any other manufactured in the State.

L. CARLSSEN, Sup't Alta Mining Co. No. 2.

HOTELS, &c.

ANTELOPE RESTAURANT, Sacramento.

NOTICE.—In consequence of the scarcity of money these hard times, the Proprietors of the ANTELOPE RESTAURANT have concluded to reduce the prices of their well-known establishment, so as to place the necessaries and luxuries within the reach of all.

The undersigned believe that all who visit the ANTELOPE will find it what it should be, a Genteel Eating House, and of the first order.

In addition to the Restaurant department, we have suites of Rooms, and single Rooms for Gentlemen Boarders or Lodgers, equal to any hotel in the city.

We shall at all times be happy to see our Friends.

Antelope Restaurant, J. D. TREAT,
J street, *Sacramento.* [5] CHAS. D. BROOKS

DAWSON HOUSE,

CORNER OF FOURTH AND J STREETS,

SACRAMENTO CITY,

This new and magnificent Hotel contains

TWO HUNDRED ROOMS,

among which are a great number of

Large Single and Double, and Suits of Rooms,

Fitted up Expressly for Families.

SAMUEL KELLEY,

v8-15 Proprietor.

WIMMER'S RESTAURANT.

WIMMER invites his friends and patrons back to his old home,

148 Montgomery street.

"There is no place like Home."

The Restaurant so long known as

Wimmer's Restaurant

will open on SUNDAY, the 21st March, where all the luxuries of the season can always be found, and they will be served up in a style unsurpassed by any establishment of the kind on the Pacific coast. WIMMER, 148 Montgomery street

10 (near the Bulletin office), San Francisco.

HOME! SWEET HOME!!

WHEN you visit the States, remember "Oak Hall," the Pioneer Clothing House, established in Boston, Mass., in 1841, where you will find every article of Clothing and Furnishing Goods (on the one price system), necessary to complete a genteel dress, for the domestic circle, the drawing room, or the church. The stock is daily replenished with goods manufactured for the Wholesale and Retail trade, and offers great inducements to purchasers.

Nos. 28, 30, 32, 34, 36 and 38, North street,

The Guardianship of Nature.

EDITORS FARMER: The man who reads the Bible and believes its teachings, includes in that belief that he is in the hands of a good being, who, though he may not in every case know how, he assures himself, will not neglect him either spiritually or temporally, provided he is honestly in earnest in striving to regulate his conduct in accordance with his Creator's will. He needs neither proof nor precept to induce him to come to this conclusion. It is an innate feeling inseparable from his nature—its maturity, the first fruits of a religious education. But it is well, notwithstanding this universal religious tendency in man, to strengthen such natural feelings by incontrovertible evidence, so that otherwise simple men may be fully equipped in "the armor of righteousness," and prepared for "the battle of life" in a manner befitting christian soldiers.

It is not in its spiritual character that I consider myself called upon to elucidate the substantial reasons, which we indisputably possess, for adhering to this primary truth. Such matters properly belong to those who more exclusively devote themselves to such subjects. But it has two phases—a natural, as well as a spiritual. By examining the natural way in which the benevolent Creator provides for our wants, we are equally fortified against the dangers of skepticism as by the other, and constrained to admire the order and regularity of those laws, and their operation, by means of which his benevolent intentions are effected.

At the very outset of our examinations, no matter what portion of Nature we attempt to investigate, we are forcibly struck with the conviction that we are meant to be "fellow-workers with God." God provides but little for man, without calling on man to step forward and perform his part. That part is not mere physical labor only. It includes mental study and investigation. He has got to understand what God has done and is doing, as the Lord of Nature, in his case, before he can properly perform the portion of the work which is left for him to do. Without this, his labor however honestly bestowed may be useless. The chances are that it must be so.

I consider myself as speaking more particularly to farmers; and as I promised last week, that I would bring before their notice a compensation of Nature which we possess in California, for a usual provision on her part which we do not enjoy, let me redeem my pledge.

In more northern latitudes, a month or two after the sun has reached the autumnal equinox, the snow begins to fall, the nights at first, and afterwards the days, get cold and frosty; the earth becomes iron-bound; the labors of the husbandman are interrupted; and whatever is done to promote his welfare in the preparation of the soil for future crops, is done by Nature alone. His aid is by her unmistakable fiat forbidden. Such is not the case here. Compared with the inhabitants of such countries we have no winter. We congratulate ourselves that such is the case. But have we not reason to be apprehensive that a state of things, which is so nearly universal in all countries where the grain plants form the principal food of man, may be essential for their continued cultivation and growth? and that this apparent advantage in our case may be unreal, and more flattering in its aspect than truly desirable? The question is of moment. What honest man would ask his friends in other States to abandon their thriving homesteads, for a vain attempt to contend against Nature in California, if she has predetermined that agricultural labors, which have formed their previous business, and in which they are well-initiated, though little qualified for aught besides, can only be carried on for a few years longer, on account of the want of those renovating interpositions on her part, by which they might be continued *in perpetuum?*

Let us not despair. The study of Nature induces us to have faith in her general arrangements. Where her more common provisions are not furnished, she generally comes forward with some compensation; by means of which the same object is accomplished in a different manner. Nay, she never omits to do so except for special reasons. Before we get suspicious of her anomalous and unusual kindness towards us, let us inquire minutely into the benefits resulting from winter frosts and snows. If the benefits are provided for us by other means, instead of finding fault with Nature, or getting frightened about our future prosperity for the want of such disagreeable companionship, let us be thankful that we can do without them. Frost and snow are not by any means desirable on their own account, irrespective of the blessings that follow them.

That, where snow-drifts have accumulated, the soil, the succeeding year, is more productive, is a fact with which all farmers are conversant. The reason seemed mysterious, until Liebig discovered that snow contains a minute portion of ammonia, which every one knows is one of the most active of manures. Other chemists have also found in rainwater—whether in the form of snow or otherwise is indifferent—other necessary constituents of plants. The accumulation of snow is therefore the accumulation of a very minute portion of manure which exists in the atmosphere, and no matter in what way such accumulation takes place, the effect must be the same. The fact, although a fact, is not a very formidable one. Whatever useful ingredients the atmosphere contains, and disposes of to our advantage, if it not do so in one way, we have reason to believe it does in another. Snow can only be looked upon as rainwater in another form. The benefits derivable from frost, however, are of a different and more important character.

There is little mystery about frost. We see at once that it is a mechanical agent. Every fragment of rock or stone in the soil is porous. Into their pores the minute atoms of water find their way. By and by comes a strong hard frost. They become so many little wedges, as thus by a law of their nature they get expanded. The partitions between the pores are torn asunder. The pores thus enlarged are capable of containing more water. An alternation of weather occurs, and again a frost. The wedges this time are larger and stronger. Their disintegrating powers are increased in the same ratio. The fragments are broken to pieces and mingle with the soil; and thus a virgin soil, possessed of mineral properties of which that under cultivation is partially exhausted, is furnished by a simple agency of Nature without the aid of man, or if man is wanted to assist, by his merely putting the soil in such a condition as will let her contrivances operate with the least interruption. Far be it from us to "wrong Dame Nature in her guardian care." But, have we not reason to blame her for being too economical in the distribution of her bounties? She has altogether forgotten us, so far as this salutary provision for replenishing unavoidable exhaustion is concerned. Those stones and fragments of rocks, too, contain the very elements of plants. One contains potash, another soda, another lime, another magnesia. There is scarcely a single case where each does not furnish several of these, or some other ingredients equally indispensable. Alas for California! At present she ranks high as an Agricultural State. "She sits a queen, and is not a widow." But hers is the hectic flush of fever, and not the roseate hue of health!

Do not believe it. Divine providence is never at fault. There is a connection between the moral and natural laws (by which the world is governed, and human society preserved and bound together), which is so universal in its provisions, that we have no reason to doubt whether in this instance we are cared for as fully as in the others. The presumptive evidence in our favor is strong. Let us investigate the case.

We want a certain effect produced—to have the stones and pieces of rocks in the soil split up and subdivided. We care not particularly about the means, so long as the object can be accomplished. Nature has other agencies besides frost. It is almost a peculiarity of water, that as it solidifies by cooling it expands. Its expansion, when it assumes a gaseous form, it has in common with other liquids. The rains of our winters soak into the fragments of stones and rocks in the soil, and the overpowering heat of our summers converts them into steam. We know the vast power of steam, apparently only second to gunpowder. What frost effected slowly in colder latitudes is here done more quickly, and with redoubled force; and so far is California from being neglected, that the mechanical agent which Nature employs for the renovation of her soil is not only of greater expansive force, but is much more extensive in its operations, and carries out the contemplated object much more efficiently.

As the summer progresses, the soil gets dried up to a greater and greater depth. The effect is not confined to a few inches on the surface as in the other case. With us it is not reckoned by inches, but by feet. And its influence is not confined to a subdividing and disintegrating process. It is so far a substitute for the subsoil plow in another respect. As the soil dries it contracts. The walls of the interstices between one little fragment of soil and another, shrink, and cling together. The interstices get sufficiently enlarged to allow the moisture of the soil to escape in the form of gas, and atmospheric air to occupy the soil so far as it is found in a perfectly dry condition.

I will not repeat the arguments in favor of subsoil-plowing which I have used already. It is equally needless to accumulate evidence that in that operation we are only doing more completely what Nature so far does for us Californians, every year. The case is sufficiently evident to make further proof dispensable. AGRICOLA.

MILLERTON, April 10th, 1858.

[For the California Farmer.]

The Ant upon the Fruit Trees.

EDITORS FARMER: You will excuse the liberty I take in addressing you: but knowing of no better source through which I could obtain the information desired than from yourself, or some of your numerous correspondents, I concluded to write you, seeking information in regard to a preventive of the ravages of the ant upon the fruit blossoms of young peach trees, and also upon the young shoots of the dormant bud just commencing to put forth. I have been exceedingly annoyed by this insect; immediately upon my young trees commencing to bloom, they attacked the blossoms, and, with all my care and attention, I was unable to prevent their literally destroying my prospect for fruit, this year. I examined all the works I have in regard to trees and fruit-raising, but was unable to find any information in regard to the destructiveness of this insect. I inquired of many persons engaged in the business of raising fruit trees, but it seemed to be something new to them: my inquiries were therefore equally unfruitful. I then concluded to try some preventive on my own responsibility. I first procured some slacked lime, and deposited some of it around the trees; but the ants passed over it as though there had been none placed there. I then had some ashes placed on top of the lime, which did not seem to inconvenience them in the least. I then took some strips of muslin, soaked them in tar, and placed them around the stocks of the trees; but they crossed the tar apparently as easily as though there had been none there; and my final effort was to sprinkle some Cayenne pepper over the tar: but, instead of its having any effect as a preventive, seemed rather to have a tendency to hurry them on their course. After having failed in all the above enumerated methods, any one of which alone I supposed would have been sufficient to to have driven them from the trees, and by which time they had already destroyed the fruit almost entirely; and knowing of nothing better to do than I had already done, I concluded to let what was left take its chances, and the result has been, that while some of my young trees have two or three peaches left remaining upon them, the majority of them are entirely stripped of fruit.

From my observations of this little insect, I feel confident that many persons have suffered by its attack on their fruit trees, and most particularly the young trees during their blooming season; but probably, without knowing what caused the loss of their fruit. I feel satisfied there must be a remedy, and being desirous of reaching it, I thought your journal would be the best medium through which to accomplish my object, and from which source I sincerely hope to obtain some information which will not only enable me to be prepared for their attacks next year, but benefit others who have been annoyed by the same pest. Respectfully, yours,

SAML. NORRIS.

THE above letter comes to us from one who claims attention as an old Pioneer, and a large ranchero. "Norris's Ranch" is one of the largest in the State, and the subject presented in the letter demands attention, and that too at the present time. We shall give our thought to it, and hope others will do the same, and let us hear from them.

Raising Grapes from the Seed.

A friend writes us a letter of inquiry: desires to know if vines raised from the *seed* (the stone of the grape) will produce fruit similar to the original. We would inform our friend, that although it is said, "like produces like," yet it does not always hold good, especially in fruits. It more generally proves that fruits produced from the seed are *better* than the original; and in this country, we have often urged the attention of our fruit-growers to the importance of the very subject: the raising *new varieties from seed.* Confident that we shall have new varieties from the seed, surpassing in excellence many now raised, and we hope any yet known. The soil and climate of California being peculiarly fitted for perfecting the grape, we can look forward with great hope to see new and successful experiments that shall add to our knowledge and to prosperity in vine-growing.

We give the following extract from the letter of our friend:

"Could you say, if grape-vines raised from the grape (fruit) are as certain to produce after their kind, and as speedily, as those raised from roots or cuttings? If so, it is much the simplest and surest means of making vineyards. I have this Spring put out 1,000 plants from the grape of '56, and all of which promise well. I have looked over all the available books on the Grape Culture, but can find nothing about propagating from seed."

We hope to hear again from our friend, and to know all about the results of his "one thousand seedling-grape." We would also urge the importance of his giving close attention to his vines and noticing the difference of the vines and fruit, (as they will differ) and to mark those that give promise of a new variety, either in color, size or quality. We esteem this experiment one of great importance and value to our State.

Letter on Honey Bees.

BLUFF-DALE RANCH, March 10th, 1858.

MESSRS. EDITORS: In the FARMER of the 5th instant, I find an article on the introduction of the Honey Bee into this State, taken from the Alta. With your permission, I will add a few facts from my own knowledge on the subject.

In the latter part of January, 1853, C. A. Shelton, reached the city of Panama, from New York, with near one hundred bee-hives. He was delayed on the Isthmus over one steamer, on account of his packages not reaching Panama in time for the sailing of the steamer. While there, I had an opportunity of examining the hives. They were constructed of rough boards, about two feet high, the other proportions corresponding to the width of the board of which it was made. The examination plainly exhibited the fact that Mr. S. had been most shamefully cheated in the purchase of his bees. One-half of the hives contained neither honey or bees, nothing but the dry comb, and a few dead bees on the bottom of the hives. The hives had probably contained young swarms which had not been able to lay up honey, before the winter was upon them, and therefore perished before they left the Atlantic States. Other hives contained but a few bees with little or no honey, but full of wax. Ten or a dozen hives appeared to have healthy swarms; but the bees were confined in such ill-constructed hives, that during the fortnight they remained at Panama, half of every swarm died.

Taking into consideration the detention of Mr. S. on the Isthmus, and the miserable contrivance for hives, it was a matter of astonishment to me, that even one swarm of the bees reached San Francisco.

With my knowledge of the facts, connected with this experiment of Mr. Shelton to introduce the Honey Bee among us, I am convinced that any number of good healthy swarms might be brought here *via* the Isthmus, at an expense not to exceed $10. They should be purchased and started from New York at an early period in the winter, in properly constructed hives, and, with a little attention, no difficulty needs be encountered in their transportation. Your readers can take my convictions. ADVALOREM.

More About the Chicken Disease.

WE give place to the following facts from "York," to whom we feel obliged for his attention. We ask of all to give us their experience. We believe in exercise, not only of the feathered tribe, but the animal, and if some of the loafers around our city could only be driven into the country to *scratch* for a living, they would do better, also; for, if we can judge by appearances, their hearts are diseased too, and as to their *livers* or living, neither can be very good. We repeat, they ought to be *made* to "scratch gravel" somewhere.

But to the feathered tribe. Will all interested please notice every form of disease, and send facts to us?

SANTA ROSA, April 11, 1858.

EDITORS FARMER: I notice in your journal of 2d inst. a letter from Mr. Bell, in reference to the cause of the fatality among chickens. That he has made a "discovery" is quite likely; but you may depend the disease lies deeper than the "crop," or the "glow worm." My own experience is limited in the henery department, but I will give it for what it is worth. Three years ago (say Dec. 1854) I bought the balance of a stock of chickens, that had "died down," in three weeks, from 150 to 40, of a party living near Lone Mountain Cemetery, and removed them to the sand hill, say half a mile distant. After a few weeks they began to drop off, and I lost about 25 per cent of them in a month. After death, I examined every chicken. The "crop" appeared healthy but the heart, in every instance, diseased; the outer coating being covered with small globules of watery matter, the heart soft, in some so much so as to be squeezed to smash between the fingers, and the liver spotted, in some cases nearly rotten; sick, generally, some fourteen days prior to death, and generally dropped off the roost, or died on the nest. Spare dirt, and plenty of exercise in the procuring of the same, I believe good. I know a ranch, in the same neighborhood, where only one died, in 2½ years, from disease. They were not fed at all; nature's bounty, alone, was their support.

Resp'lly yours, YORK.

Training of Apple Trees.

THE Committee on Fruit, at the late Exhibition of the Mechanics' Institute, in their report, give the following directions for training apple trees, and though we have often recommended the same plan, sustained by the experience of practical men, the subject is of sufficient importance to bear reiterating:

"Wherever the plan of heading down the young trees, so that they shall throw out a section of branches near the ground, has prevailed, success in raising apples has been the result. By forcing out branches near the ground, a constant shade is given to the trunk of the tree, and the earth around it is kept cool and moist. This enables the sap to ascend and descend freely, at all times, to all parts of the tree. Again, by heading in the side branches, the buds nearest the trunk, which otherwise would remain dormant, are forced into fruit spurs, and the terminal bud and those nearest it throw out a subdivision of shoots, which, with their rosettes of leaves, (the germs of fruit spurs to be fully developed the next season) afford a shade for the interior of the tree which gradually becomes a mass of fruit, inside, instead of presenting an open straggling head of naked canes having apples only on the ends of the twigs liable to be whipped off by the winds and blistered by the sun. Other advantages, such as greater facility of getting the fruit and pruning the trees, are in favor of low training. Your committee have frequently been pained to witness the persistence with which some cultivators continue to offer to purchasers high-grown trees, without urging upon them the necessity of heading them down on planting. The result of this highly censurable conduct is, that there are found all over the State orchards where the trees have trunks from three to six feet high, without a branch. Examine every such tree, and it will be seen that the bark is tight and dry, and the trunk in most cases dead on the side next to the sun. Every such cultivated tree is worthless, and will soon perish."

Wash your Trees.

THE dry season is near at hand, and particular attention is needed for the preservation of Fruit and Ornamental Trees, Vines and Flowering Plants and Shrubs. Much of the injury or decaying condition of trees, plants, etc., is attributed to our dry and hot climate, when every appearance of this injury could be removed by gentle showering after nightfall; the main injury being the obstruction of respiration through the foliage of the plants, the leaves being the lungs of the tree or plant, and being covered with dust, must perish unless cleansed by showering.

A little reflection should convince any one of the superior or *perfect* plan which nature adopts to wash the leaves and all branches of trees, by gentle showers, they after falling upon the leaf, descend to the earth and feed the root. If our cultivators would imitate nature more, they would be more successful. Why will our common-sense men pour rivers of water upon the surface of the earth or around fruit trees, or upon garden grounds? Natural rivers make their beds *below the surface,* to nourish in quantities other and smaller streams, while all surface waterings falls upon the earth in *drops of water.*

There is no longer excuse for erroneous practices. We have all kinds of windmills for raising water, and every invention for distributing it in such perfect imitations of nature, that even the buds and blossoms are deceived, and they go on and perfect their work, the same as if the clouds gathered and the rain drops fell. Let us then be wise, use the means art and science place within our reach, and we shall soon see that *nature* will join in harmonious union.

Regulating Rodeos.

AN ACT supplemental to "An Act to regulate Rodeos," passed April 13, 1851.

SEC. 1. Whenever the owner, agent of the owner, or parties in possession of any cattle or stock, shall desire to remove such cattle or stock from the range upon which they have been running for the space of one week, or move to another farm or range, thirty miles or more distant, they shall be required to give three days notice to the neighbors having cattle or stock, before such removal, in order that the said neighbors may get their cattle out; and shall be further required to give a general rodeo for that purpose.

SEC. 2. Any person failing or refusing to comply with the provisions of this Act, shall be deemed guilty of a misdemeanor, and, upon conviction thereof, may be fined in any sum not less than fifty dollars, nor more than five hundred dollars, and shall be liable to any party aggrieved in damages.

SEC. 3. All fines collected, under the provisions of this Act, shall be applied to the fund for the support and maintenance of the indigent sick, in the counties in which such fines may be collected.

SEC. 4. This Act shall take effect on the first of May next. [Approved April 15th, 1858.]

SPLENDID HOME.—We call the attention of those who wish a splendid home, to the advertisement in our special columns. It is more, than even described.

Top-Grafting and Root-Grafting.

The annexed letter, upon the very important subject named above, is worthy an attentive perusal. The letter was first addressed to our friend J. B. Saul, Esq., at Smith's gardens; its value has secured to us a copy, and we hope to hear often from the same writer, and all others interested. Our columns are always open to such subjects, and we hope it will draw out a controversy that shall result in good.

—

Georgetown, El Dorado county, March 29, 1858.

James B. Saul Esq., Sacramento,—Dear Sir: Your letter, requesting the result of my experience in root-grafting, was duly received; and, in as brief a manner as may be, I will now give all the material facts connected with the subject which have come within the range of my observation.

But first let me premise that the fruit growers of Illinois (where I cultivated a nursery for twenty years) have often a "hard road to travel;" have difficulty to encounter scarcely known elsewhere. The soil is rich, trees grow rapidly, and the climate is so changeable and so severe that the winter-killing of young trees is very common. As to peaches, cherries, and pears, winter-killing is the general rule, and such as live long enough to produce fruit are the exceptions; and, it must be admitted, rather rare exceptions. The apple tree fares much better, but still immense numbers, both in nurseries and young orchards, perish by the severity of their terrible winters. If a young apple tree can be got through to five or six years old, it is regarded as pretty safe. But the winter of 1855–6 swept away many apple trees of ten to fifteen years old; and you might travel a hundred miles without seeing a living peach tree.

In such a climate, the best mode of securing the health and longevity of trees, becomes a question of no small importance; and the attention of cultivators was early directed to the relative merits of top-grafting and root-grafting. The grafting of the apple upon short sections of root, was, I believe, first commenced, *as a business*, at Rochester, N. Y., about the year 1830. From 1837 to 1845, large quantities of these root-grafted trees, from Rochester, were sold and planted in Illinois; and during the same period, local nurseries sprung up, which distributed untold numbers of trees raised upon the Rochester plan. The severe winter of 1842–3, and those again of 1846–7, were very destructive to these root-grafted trees, especially where they had been planted upon very rich soil, and had been stimulated by high cultivation. The seedling orchards of the first settlers seemed to suffer less than the grafts; and in some cases, trees of considerable age, grafted in the top, escaped injury, while root-grafts in the vicinity perished. It was in this state of things that Professor Turner, a talented and popular writer, devoted to the cause of fruit-growing, published in the Prairie Farmer a series of papers, denouncing the practice of root-grafting altogether. I will not, at this distance of time, and without the documents, attempt to state the Professor's theory, his facts or his arguments, but the conclusions from his premises I well remember were, that all trees grafted at the root must, from the very nature of things, be tender, short-lived, and unproductive. At the time of this publication there was probably not a root-grafted tree in the whole State of Illinois, over ten years old; and therefore no one, unless he possessed the gift of prophesy, could decide whether the professor was correct or not, as to the longevity or productiveness of such trees. That they were in a certain sense tender, that is, could not stand a sudden change from tropical heat to polar cold, was obvious to everybody. A sprightly controversy was carried on for a year or two, through the Prairie Farmer, between the advocates of top-grafting and root-grafting, until Professor Turner, in a handsome, manly article, abandoned most of his positions, and the controversy ended.

With the above remarks as a preface, I am now prepared to say a word upon my own experience in this matter. In the spring of 1840, I commenced an orchard in Peoria county, Illinois, by planting fifty trees of my own growing, top-grafted, and four years from the seed; also, forty trees which had been root-grafted at Rochester, three years previous, by Mr. Rowe, the originator of the system. The stocks, I was told, upon which Rowe grafted were the *lateral roots* of scrubby seedlings, taken from old seedling nurseries. From 1840 to '50, my apple orchard was annually enlarged until it numbered about sixteen hundred, nearly half of them being root-grafts, and the remainder worked in the tops by grafting or budding. It cannot yet be told which class will live the longest, or which will, during the entire period of their existence, produce the most fruit. Up to the time of my leaving Illinois, two years ago, I knew the personal history, so to speak, of each individual tree in my whole orchard, and my son, who is now in possession, informs me there has been no material change since then. Thirty-five of the forty trees obtained from Rochester are still living in good condition, many of them about a foot in diameter, and at the age of twenty-one years from the graft, exhibit no signs of premature decay. They are every way equal to the top-grafts of the same age, which have in all respects fared in the same manner; and the above remarks will hold good when applied to all the younger trees of the orchard. Could I go with you through this collection of old trees (old for a new country), and carefully compare a series of top-grafts and root-grafts, I think I could convince you or any other intelligent cultivator, that the mere fact whether an apple tree is grafted in the top or on a small *piece* of root, has nothing whatever to do with its health, longevity, or productiveness; but we should find that the *character of the stock*, whether faster or slower than the scion, had very much to do in determining the success or failure of the tree. If a cion be placed upon a stock which grows slower than itself, the tree produced from that cion will be dwarfed to the full extent of the difference between the two, whether the stock be an entire tree and grafted in the top, or a mere section of root no longer than your finger-nail, the tendencies of the future tree will be the same. Again, if a slow growing variety be placed upon a stock more vigorous than itself, the progress of such tree will *not* be increased, for the reason that all the substance of a tree is prepared in the *leaves*, and the leaves of each variety are so formed as to support and increase the trunk and roots of that variety, and no more.

In a climate like Illinois it is desirable to check the vigor of rampant, late growing trees, such as the Baldwin, Rhode Island Greening, &c. It renders them more secure from the effects of winter frosts, and is supposed to bring them sooner into bearing. Hence the most rigid stocks are regarded by many as the best. But here, where winter killing is unknown, and there is a strong tendency in trees to produce fruit prematurely, a different system should be followed.

It is the practice of some, in root grafting, to place the cion upon the collar of an entire seedling root of one or two years old, while others cut up the root into sections of two to four inches. The longer and larger the root the more vigorous will be the growth of the cion the first season; but the long root is very likely to become infected with sprouts, which are a serious incumbrance and damage to the tree. The short root, if it starts the cion at all, is much more likely to produce a perfect and well balanced tree. I began twenty years ago, to graft with long roots and short cions, but gradually changed the practice until, within the last ten years, I have given a decided preference for long cions and short roots.

There is a nurseryman by the name of Slater, in Adams county, Ill., who has, during the last fifteen or twenty years, produced great numbers of apple trees from *layers*. He digs deep trenches, as for cellery, plants his trees horizontally, and covers them up entirely, except the points of each twig, which he bends upward, leaving these points or ends of each twig out of the ground, and, as they grow, earths up his trench until the ground is level. This earthing up is performed during the first season. The second season a set of roots are formed near the surface of the ground, and the best trees are sometimes taken out for sale when two years old. The third year the row is all taken up and assorted—the largest sold, and the remainder planted out in nursery rows. This mode of rearing trees seems to me to be anything but economical; yet I am told that Mr. Slater has been very prosperous, and that the orchards started from his layer trees are among the most flourishing in the country. Although it never came in my way to examine one of these orchards, I am strongly inclined to the belief that the most perfect mode yet known of multiplying any given variety of the apple tree is *by layers*. My reasons for this belief are briefly as follows: In no other mode can you so nearly reproduce the normal tree, which is never improved by grafting on a stock more vigorous than its own. Your layer tree is, in all its parts, a Baldwin, a Bellflower, or something else—a regular extension of the first Baldwin or Bellflower, and, the conditions being equal, just as good a tree. The root and the top are perfectly balanced. The leaves are so organized that they elaborate and prepare just the kind of aliment which is best calculated to nourish and extend the trunk and the roots. And the roots, in return for what they receive from the leaves, are able to send up through the sap-wood precisely the quantity and the kind of food which the leaves are prepared to digest. There is no unnatural marriage between a refined delicate organism, and one which is crabbed and savage. The whole tree can perform its different functions in harmony, and, it seems to me, is much more likely to enjoy an old age of usefulness and respectability, than one which has been united in its youth with a sour, crabbed and unrefined specimen.

There is a notion prevailing with some, that the stock upon which a graft is placed has a limited degree, at least, of influence upon the flavor of the fruit. This is, probably, an error, as fine sweet apples can be grown upon the stock of the wild crab tree. The peculiar conformation of the *leaves* of each variety determines and fixes its character. But it frequently happens that the food prepared in the leaves of one variety of the apple will not be received by the root of another variety. (There are many seedlings which will not receive the food prepared by the leaves of the Early Harvest.) The root will send up its sap or food to the leaves, but will not receive back, through the inner bark, the food prepared by the leaves. In such a case the root soon becomes exhausted, and the young cion or tree dies. But when the organization of the stock and the cion are so similar, that the food prepared in the leaves of the cion is adapted to the nourishment and the growth of the stock, then the tree will flourish *just as well* as the finest Baldwin or finest Bellflower would have done under similar circumstances, but no better. You may place the cion of a yellow Ingestree, a Prior Red, or an American Summer Pearmain, upon the most thrifty and vigorous stock, and it will remain feeble and stinted. In other words, you can never increase the capacity of any given variety of tree by grafting upon a stock more vigorous than itself. You can, if the selection of your stock be fortunate, come up to the standard of the original tree, but can never exceed that standard. But enough for the present. Yours, truly,

E. Harkness.

Letter from Petaluma Valley.

The Kicking Cows, and the Runaway Mares—How shall we Promote the Cause of Immigration?—What kind of People we want to make our State a prosperous one—A plain Story plainly told.

[We hope our friend "Wash" has not been "kilt" by his black cow. We feel anxious to hear from him.]

Petaluma Township, April 11, 1858.

Messrs. Editors: To-day I got in a fine position to judge clearly about what your friend "Wash." said (in No. 1, vol. IX) of his gentle cow. After having milked one cow, I had just commenced with another, when the first one rubbed against the one I was milking, causing her to move first backward and then to one side. In endeavoring to save the milk, I reached after the pail under her; but alas! too late. Then I attempted to save the pail of milk behind me, but the cow, in retreating, pressed upon me, and neither myself, the pail or the milk could stand the pressure from without. At that moment I had no time to discover the stars which friend "Wash." had seen on a similar occasion; though as it was I pretty soon commenced milking again, after having pacified the cows. An hour or two afterwards I led two mares to town, to improve the stock; one of them gentle, but unbroken; the other half half broken and half gentle. On starting I anticipated being back home at an early hour; but the result was far otherwise. A wagon passed me on the road, and I thought best to give wide way; and in my endeavor to do so the gentle mare got unruly—she pulled sideways, I backward, and the other mare (probably finding that there was some pulling going on) pulled forwards, and being weakest of the trio, I was obliged, after some dragging and pulling, to let go the rope, and they run, and I after them. It was a warm day, and the prolonged race acted like a steam-bath upon me. As soon as I had succeeded in getting the animals again, (which I did not accomplish till they had led me far out of my way), I fastened them to a tree, and proceeded to give the gentle mare a lesson. During this operation, she gave me a severe kick on the arm. I arrived at my destination about noon; was obliged to wait some time, and when I reached home again it was late in the afternoon.

Land title affairs in this vicinity, so far as I know, are in nearly the same unsettled condition as when I last wrote you.

The recent suggestions in your paper about bringing more immigrants to California, brought back to me old thoughts of mine on the same subject. There was an allusion to an Immigration Committee to promote this object. I think such a committee could and should act two-fold; first, they should devise means to keep the hard-working farmers and also miners (many of whom will eventually turn farmers) here in California; and then, and not till then, should they seek to induce people to come here. Their first step should be to make the population already here contented, so that they might not only remain, but also induce them to write home to their relatives and friends to come. The committee, as a body of well-informed men, could assist to give, through your columns and other papers advocating in earnest the same cause, all information in regard to where lands with good titles can be bought. There are many here who would gladly write home for their friends to come, if they could hold out any inducement for such a step. But they cannot, so long as they themselves have only a sort of card-house home after five, six, or eight years' hard working here and there. When a man writes to a friend, he is believed, hundreds of articles in interested or disinterested papers notwithstanding. But very many do not write for their friends to come because they have no fixed home yet, and because they have no reason to be content themselves.

Yours, respectfully, Henry Schmidt.

Trial of New Seeds—The Southern Field-Pea.

Editors Farmer: Accompanying this, you will please find a small bag of the above Pea, so justly celebrated in the South for its forage-producing qualities, as well as for the vast quantities of pease* it produces. It is also considered of great value in the sugar-growing districts, as a fertilizer. I received a small parcel of several varieties last spring, through a friend of mine, from Georgia, and have given them a fair trial on the arid soil of our valley, *without irrigation*, and I do not hesitate in saying that they withstand the drought, and produce better, than any plant in the country, native or introduced. I exhibited a vine at the Fair last year, which must have produced several thousand black-eyed pease. I send you two varieties, mixed, which you can plant yourself, or give them to some of your friends who will try them. But they should be separated, and planted so that they will not hybridize or mix, as they do, very freely. I have two other varieties, the red hog-pea and the lady pea; but as I have but few of the last two varieties, I promise to send you some of these *next* year, in time to distribute to your subscribers. The red hog-pea, I forgot to mention, I received from my friend Governor Edwards, who raised it last year and got it from Arkansas. It is said to be a very valuable and prolific variety. I consider it a valuable introduction into this State, as I find it to be eminently suited to our climate and soil. The black-eyed variety, besides being invaluable for stock, is an excellent table pea.

Colfon.

* Wrongly spelled peas.

Wasps and flies may be caught in graperies by placing several small bottles, containing a mixture of beer and sugar, or molasses, in different parts of the house. The bottles should be emptied as often as filled with the pests. Fine netting, so fixed that the lights will slide up and down without interruption, will also be a good remedy. Improper ventilation, and a damp atmosphere, are, however, greater evils.

Testimony in Favor of Dioscorea Batatas.

Considerable discussion has been had relative to the value of this singular tuber, and we are desirous of furnishing all the light we can upon the subject. Maj. S. J. Hensley of San José, has very kindly and liberally scattered many tubers over our State, and we hope to hear from them in full detail, for our journal; at least we have the promise from those to whom we have furnished them by the generosity of Maj. Hensley.

We find in the last Horticulturist, a series of letters, giving the experience of many cultivators of this tuber; from these we select the testimony of two, and give them to our readers for their information, and we most urgently urge upon our friends everywhere to give us the details of their experiments:

"In the spring of 1856, I made an investment of *three dollars* in the new root, for which I obtained a small tin box, about three inches by two inches, half filled with mold, in which, after close inspection, I discovered *twelve* small tubers and bits of root, each about as large as a pea. To tell the truth, I considered them *very small potatoes* indeed, and planted them with no great expectation as to the result. The ground they were put in was a poor, clayey, soapstone soil, with a small quantity of stable manure dug in; it was, however, well trenched. Each *set* was put in a small hill of wood mold, and the hills were three feet apart, as I wished to give them a chance to run. Well! I watched these hills very carefully, but saw nothing till the 4th of *June*. Then, two leaves appeared in one hill, and, three days after, two similar ones on another. None others put forth till past the middle of June, when they came up in all the hills but three, thus leaving me but nine plants. Of these nine plants, I lost three more by an old hen, who scratched them up. The six grew above ground *very slowly* and *weakly*, except the *two* first, and these were three feet long by the end of June. They all continued to grow till frost, when the average length of the four weekly ones was about three feet, and, of the other two, probably ten feet. During the summer, the ground was kept free from weeds, and occasionally hoed; only to the two strong ones I gave two or three soakings of liquid manure, in July and August.

When the vines were killed by the frost, I proceeded very anxiously to dig them up, to see what was *under!* Having heard that they went down *deep*, the spade was sent the whole length of the iron, and the *hill* thrown up. The *crop* was something *astonishing!* In the two best hills there were nine roots, averaging about four inches long, and as thick as a man's finger. In the other four hills were eight more roots, each rather less than those from the two first hills! And this was all, except seven small tubers (like peas), which had formed in the axils of the leaves on the vine that came up first, where it got covered with earth. I was quite *sure* there was nothing else, for I dug all over carefully, as deeply as the spade would go, and examined closely. A humbug I now thought it, of course. A friend suggested that perhaps I had not found *all*; so I began at one of the hills again, and after getting down about eighteen inches, I discovered the *top* of a piece of root, which exactly fitted the *bottom* of the centre one I had first removed, and which I then remembered looked *raw*, as if *broken off*. I traced this root down! down! till I thought the *end* never would come. At thirty inches from the surface, I at last touched *bottom*, and turned out the remainder of the root—a piece about twenty inches long, an inch in diameter at the top, and three inches in diameter at the bottom. Adding to this the piece first obtained (about six inches), I had a root *twenty-six inches long!* gradually enlarging from less than a quarter of an inch at the top to three inches at the bottom. There was still some inches long of thin root by which it reached the surface, which I did not reckon. It resembled a large *parsnip* growing wrong end up, only the surface was fine, and covered with minute rootlets. All the others were now similarly examined, except the *meanest* of all in upper growth; and as the ground was then freezing hard, that was left unexplored.

In the next best hill, I obtained a similar bottom piece, about fourteen inches long, making a whole root of eighteen inches in length, but rather thicker than the first. One of the other three hills gave up a root ten inches long, and the other two averaged eight inches, all thinner than the two first. I thus made a discovery in *every hill*, and one that surprised and pleased me.

The largest root was boiled ten minutes. The skin peeled readily off, like thin tissue paper, and revealed a mass of snow-white farina, perfectly light and dry, which all pronounced *excellent in quality*—in fact, *delicious*. It was so much relished, I had to secrete the stock to preserve it. To my taste, it was like a mixture of first-rate mealy potato with ground almonds. My family all decided they would give up potatoes at once, if enough of this substitute could be obtained.

The following spring (1857), my man began to dig the ground over where they had grown the year before, and, to our great surprise, turned up another root, in the unexplored hill. This was, altogether, about twenty-one inches long, and had remained in the ground all that severe winter entirely unhurt.

I now divided my stock into one hundred and twelve small sets, but lost about thirty from the following cause: When cut, the fresh surface is covered with thick, white, gummy milk, which hardens if left in a dry place; but not knowing this, and being then unprepared to plant them, they were put in a damp cellar, and thirty of them rotted. They should have been well *dried*, and kept dry till planted.

In the last week in March (1857), my whole stock was committed to the earth. They were now planted in a still poorer, cold and wet place. They vegetated in May, but seemed not to make much growth till July, when the majority were about equal to my two best hills of last year. The ground had been manured with *fresh* stable dung, and some *guano*, both of which are hurtful, at least when used at the time of planting, and near the surface.

In the early part of May, while hoeing on the ground occupied by the Dioscoreas the year before, I was surprised to see a fine, vigorous vine, from a *chip* broken off in the digging up, and left in the ground all winter; or, it might have been one of the axillary tubers. At all events, it made the earliest and most *vigorous* growth during the summer, and, in the fall, produced one of my best roots. My main bed was planted one foot apart each way, and during the whole of the summer, the top growth was quite meager, on the whole. The first week in November I dug up again, and the average yield was about the same (one hill with another) as the average of my first six hills; but, by *layering* many of the vines during the summer, I obtained a good number of axillary tubers. I have thus got from my original three dollars' worth quite a stock—enough to plant probably a quarter of an acre of ground, with a few for tasting. The result on the whole, has given me a good opinion of the Dioscorea, and I think that, when the cultivation of it is better understood, we shall succeed well with it. My own experience tends to show that it should be planted *in the fall* or early in spring, and that, if any manure is used, it must be well decomposed, and must not be in contact with the root in the early stages of its growth. It should, in fact, be put at the bottom of the digging, and that should be at least thirty inches deep. Above all, the ground should be light and *deep*. Any hardness in the soil, or any obstruction whatever, seems to hinder its growth both by preventing the vine from shooting up, and, also, by twisting and dwarfing the root.

Now, Mr. Editor, here is the result of one small experiment. Let us have all the light we can, for I cannot but think the subject is worthy of *thorough investigation*. I should particularly like to know if any of your readers have tried the Dioscorea with *other manures*, and if so, what were they, and how used? also, the kind of soil they were planted in, and the season when planted?

One of my best roots grew with nothing but good, light, wood soil, and no manure. Now, gentlemen, you who have experimented, tell us all about your *Dioscoreas*."

"Andrew S. Fuller, of Brooklyn, New York, states that his own experiments have been quite satisfactory *wherever he planted pieces of roots*; that they must be left two seasons in the ground; that the same root does not continue to enlarge the second year, but that, after throwing out its new roots, it decays. If thus treated, on the two seasons' plan, it will yield as much per acre as has been claimed for it, or more than double the common potato. He plants in rows two feet apart, and six inches apart in the rows, which gives 43,560 tubers per acre, allowing only one pound each, which is far below the average, and has 43,560 pounds per acre, or more than five times the average of the potato. He thinks the depth it attains is advantageous, inasmuch as it is by that occupancy of otherwise waste ground we get so heavy a yield.

The testimony, on the whole, is sufficiently favorable to induce a continuance of the experiments. It is still a question whether those who took much pains to ridicule this edible root and made their fortunes by the Sorghum and Imphee seed, will not have to change their tactics. The Dioscorea is still in repute both in France and England, where they talk of eight and eleven tuns to the acre. This journal has waited for facts: in the case of neither plant has a proper or permanent solution yet been arrived at among us. Meantime we must be patient and hear again from such careful observers as Dr. Hollick, and especially let us learn what have been the results of experiments at the South with Dioscorea."

Thorough-bred Imported Horse "Consternation."

J. B. Burnet, Esq., of Syracuse, has sold this celebrated stallion to Mr. John P. Welsh, who takes him to Oregon, for the sum of $3500.

This horse received the first prize at Utica, in 1845, and was exhibited four times, subsequently: in Syracuse, in 1849; Albany, 1850; Rochester, 1851; Utica, 1852; and received the certificate, as the best thorough-bred horse on exhibition.

We have considered him as the best thorough-bred introduced into this State, in our day, and his stock shows that he is one of the best foal-getters we have had in this State (N. Y.) for many years. He was brought to this country by Mr. C. J. Abbott, of Oneida county, where he has left some of the very finest stock, and since he came into the possession of Col. Burnet of Syracuse, he has left, in that section of the State, some of the best stock in this State. While we regret to lose him, we congratulate the farmers on the Pacific, at the rich treasure Mr. Welsh has secured for them; and we trust he will arrive safely to the new location designed for him, and give the same evidence there, as he has here, of his sterling qualities as a stock getter.—[Journal of the N. Y. State Ag. Soc.

The Borax Lake in Napa County.—The company owning the Borax Lake in this county, are, as we learn, preparing to manufacture this article on a large scale, and have procured the boilers and other apparatus necessary. Last winter a well was sunk in the midst of the lake, surrounded by a coffer dam, and a few feet below the surface a spring of intensely salt water was struck, which has been running ever since. Other substances are found in solution in the waters of the lake, and among these is iodine in large quantities. The Clear Lake region is one one vast laboratory, on the most gigantic scale, of which the crude productions are sulphur, salt, borax, soda, and iodine; and doubtless many others, which will be developed when the country is better explored. Why could not all or most of these be profitably manufactured or sent to market? Borax and iodine are sufficiently valuable to bear transportation, and sulphur as an ingredient of gunpowder, or in the form of sulphuric acid, might, perhaps, be made to do so. We make the suggestion, and others may, perhaps, profit by it. The grain of that region finds its way to market in the shape of pork and whisky, and until better roads are made, its chemical products may be compelled to undergo as great transmutations. One thing we regard as certain, namely, that at no distant period, the Clear Lake region will be the theater of extensive chemical operations, requiring vast capital, and supporting a large population.—[Napa Reporter.

Forgery by a Dog.—A large dog had been accustomed to get bits of money from his master to go to a meat stall to get his lunch of fresh meat. One day, when change was short, his master gave Growler a piece of white paper on which was an order for the meat. The dog, after much urging, carried it to the meat stall and received his food; and so for several days, when thinking one piece of paper as good as another, he would pick up pieces of white paper and carry them to the stall, without applying to his master. In a short time a long bill came in from the meat dealer, who had such confidence in the dog that he did not think to look at the paper, and the dog himself was very fat. No arrest was made, and the dog occupies as respectable a position in society as ever.—[Bangor Courier.

An old advertisement of 1568, reads: "Wanted—a stout, active man, who fears the Lord, and can carry two hundred weight."

Miscellany.

LINES IN AN ALBUM.

Who would not wish to register his name
On thy fair page, to Friendship's pledges dear?
That heart, indeed, were cold whose joyless flame
Could own no raptures while it lingered here.

But while I write my name, unworthy thee,
One wish remains, *one* solitary prayer;
'Tis, that thy *heart* were open thus to me,
And my *remembrance* deeply written there.

ANONYMOUS.

[For the California Farmer.]

Symphonies.

'Tis night; the falling rain is watering the thirsty soil; the footsteps of the busy throng are hushed upon the streets; in solemn silence the drapery of darkness hangeth over all created things. The plaintive wail of "Mary Glen" is ringing in my ears, "Alone in the world." That one sentence is rife with the eloquence of sorrow. Yet to how few it speaks in tones that thrill to the very center of their being. When will the voice of slander cease? When will Earth's fairest daughters learn that charity is their noblest attribute of character.

Alone—no friend in whom you can confide; no home to attract you to its bosom; no voice of love to greet thy coming; no soul that owns affinity with thine. Words cannot express the depth of gloom in isolation. Memory retains its hold upon the mind, daguerreotypes the pictures of sunny hours, long past, only, when the reverie is over, to fade away and leave the darkness of the tempest-scarred night. 'Tis ordered wisely that none can penetrate futurity, and gain foreknowledge of the vicissitudes which follow in quick succession upon the course of human life. While yet the echoes of a sorrowing sister's voice are lingering near, we catch the gentle tones of one who prays that "flowers may be her crown, her scepter that of Love;" she reads in flowers the language of Divinity; their silent teachings drive from out her soul the sense of lonliness that sometimes steals over even the happiest of this world's children. "In music's tones, in winding brooks, in rustling leaves, and woodland bowers" she hears the voice of Love—the Love that binds humanity in its embrace—that is the corner-stone of all we know of bright and hallowed associations. May Love be hers, and garlands bloom perennial for her brow.

With saddening strain there comes a "voice from spirit land," and truthfully it tells of those for whom disappointment had mingled its embittered draughts; who lived in vain; who strove in vain; and, throwing off the weary load of life, laid down to sleep in quiet, in a nameless grave. From voices such as these we gain a knowledge of the souls of those who give utterance to their feelings. All are essentially alike. The lonely sister asks for sympathy and love. The gifted one, who prays that flowers may be her coronal, would take it from the hand of Love. From the low grave of Genius comes an echo to their prayers—it died for lack of human love.

SOLTERO.

"Honor Thy Father and Thy Mother."

BY MRS. SARAH C. CARTER.

"Don't speak so, my son! Dont speak in that tone to your Grandfather; it is not respectful," said Mrs. Hale to her son George, who was in the yard, talking in a loud voice.

"I did not know that I was saying anything wrong, mother," said George.

"Perhaps the words were not wrong, but the tone was. You should speak to people older than yourself, in a respectful manner, as well as with proper words," replied Mrs. Hale. "I wish you to remember, George, that the text I have so often repeated, "Honor thy father and thy mother," is meant to apply to your grandparents, and other aged people, in some respects, as well as to your own parents."

The evening after this conversation, George was sitting near his mother, looking very thoughtful.

"What are you thinking about, my son?" asked Mrs. Hale.

"About that text you spoke of this afternoon, mother. I don't know as I understand it very well. I wish you would tell me a story about it, as you do sometimes about my texts; and then perhaps I should understand it better."

'Repeat the whole verse, my son, and then we will talk more about it."

George repeated very slowly and distinctly, "'Honor thy father and thy mother; that thy days may be long upon the land which the Lord thy God giveth thee.' Will God let people live longer who honor their parents?" asked George.

"That is God's promise," answered Mrs. Hale. "We know that his promises are all true, and will all be fulfilled in the best time, and in the best way. He will surely bless those who obey his commands. If long life will not be a blessing to any of his children, He will take them to Heaven, before they are old; but if they can glorify Him by living long upon the land, He will preserve them many years."

"Mother," said George, "you once told me, that honor means to obey; but I know now, that is not all it means. Will you explain it to me more?"

"Honor means to obey, first; and then, in every way you can, to add to the comfort and happiness of your parents," said Mrs. Hale.

"Will you tell me a story about it, now, mother?" asked George.

"Yes, my dear; I am very much pleased that you should think so much of this subject, for it is the first commandment with a promise, showing that God considers it of great importance. I could tell you many stories illustrating this subject, but now I will speak of a family I know well:

"There are ten children in the same family; three sons and seven daughters. The parents were once rich; but misfortune and sickness made them poor. As soon as the elder ones were able to work, they left home, and earned as much as they could at different occupations. Some were seamstresses, others teachers, and the boys worked on farms. Whatever wages they earned, the larger portion was always set apart for the benefit of those at home. The parents took great pains to instruct them well in their several duties. They taught them to be respectful to the aged, to be kind, and obliging, and polite to everybody. They taught them, that any occupation was honorable, if honest, and often said they would rather see their children very poor, if honest and good, than to see them rich, if proud and wicked. They were taught habits of self-denial for the good of others. 'Be good, and do good,' their mother often told them, 'and God will surely bless you.'

"For several years the father was an invalid, but wanted no comfort which the united efforts of his children could procure for him. The declining years of both parents were made happy by the kindness of their dutiful children."

"Where are those children now, mother; are they all living?" asked George.

"Yes; they are all living men and women—industrious, respectable, and some of them are becoming very wealthy in Western cities; others are on farms, or teachers in schools; and all have comfortable homes."

"I would like to hear another story about that text, mother," said George.

"Not this evening, George," said Mrs. Hale. I hope you will learn from this, that, "they that honor Me, I will honor," is a promise of God, which never fails. This family of whom I have told you, honored God, by keeping his commandment, "Honor thy father and thy mother."—[The Little Pilgrim.

"In Memorium."—Ten thousand associations cluster around those words. Volumes might be written from their silent monitions. Look we upon the past, "*in memorium*," we behold the pictures long since hidden in the *camera obscura* of our being. They tell of holy love; of buried affections; and softly speak of days when all the earth seemed clothed with never-fading verdure. Sadly we hear, in their expression, the voices of early days. "*In memorium*" stands over the portals of the tomb; is gilded by the hand of ostentation upon the mausoleum, and is borne, upon the sighing night wind, over the lone grave of the wanderer who sleeps in quiet, far from his youthful home, amid the sierras of a distant land.

SOLTERO.

Civility is a Fortune.—Civility is a fortune itself, for a courteous man always succeeds well in life, and that even when persons of ability sometimes fail. The famous Duke of Marlborough is a case in point. It was said of him by one contemporary that his agreeable manners often converted an enemy into a friend; and, by another, that it was more pleasing to be denied a favor by his grace than to receive one from other men. The gracious manner of Charles James Fox preserved him from personal dislikes, even at a time when he was politically the most unpopular man in the kingdom. The history of the world is full of such examples of success obtained by civility. The experience of every man furnishes, if we recall the past, frequent instances where conciliatory manners have made the fortunes of physicians, lawyers, divines, politicians, merchants, and indeed individuals of all pursuits. On being introduced to a stranger, his affability, or the reverse, creates instantaneously a prejudice against him. To men, civility is, in fact, what beauty is to a woman; it is a general passport to favor; a letter of recommendation written in language that every one understands. The best of men have often injured themselves by irritable and consequent rudeness, as the greatest scoundrels have frequently succeeded by their plausible manners. Of two men equal in other respects, the courteous one has twice the chance for fortune.

A Word to Little Girls.—Who is lovely? It is the little girl who drops sweet words, kind words and pleasant smiles as she passes along, who has a kind word of sympathy for every little girl or boy she meets in trouble, and a kind hand to help her companions out of difficulty; who never scowls, never contends, never plagues, never teases her mates, nor seeks in any other way to diminish, but always to increase their happiness. Would it please you to pick up a string of pearls, drops of good diamonds, and precious stones as you pass along the streets? But these are the true pearls and precious stones which can never be lost. Take the hand of the friendless; smile on the sad and dejected; sympathize with those in trouble; strive everywhere to diffuse around you sunshine and joy.

At $50 - - - - The Season.

The Season commencing April 1st, and closing September 1st, 1858.

Black Stallion, 16 hands high, 5 years old. Sired by *VERMONT BLACK HAWK*. Dam, Lady Messinger. 12

ACHROMATIC MICROSCOPES.

J. & W. GRUNOW & CO., New Haven, Connecticut, invite attention to their superior

Achromatic Simple and Compound Microscopes.

These Instruments have obtained the commendation of the most eminent scientific men of America, and have received the premiums of the New-York World's Fair of 1853, and of the Connecticut State Agricultural Society of 1856.

These Microscopes vary from forms of the greatest possible simplicity to those combining the most elaborate of modern improvements.

They call the particular attention of Students and Teachers to their EDUCATIONAL and STUDENTS' Microscopes; which are provided with object-glasses sufficient for all ordinary investigations, and of a quality never before sold by any American or foreign maker at prices so low.

Priced Catalogues will be sent gratis upon application. J. & W. GRUNOW & CO. have also now ready for distribution, an elaborate Descriptive and Illustrated Catalogue which will be sent post-free upon receipt of of 30c in postage stamps. *eoply

LINDSEY'S

Double Acting Rotary Force Pump.

THIS is a new Pump, patented in America and England in 1855; and for Cisterns, Wells, Mines, Engines, Railroads, &c., has no rival: in that it works easier at great depths, discharges water at different hights, can be used for a hose, is made entirely of wrought and cast iron, without suction or packing, simple in construction, easily put in, not likely to get out of order, will last for an age, and is cheaper than any other Pump. It has a wrought iron pipe, side gearing and balance wheels, with everything complete to raise water by hand, from one to one hundred feet; and costs, boxed and shipped, from $18 to $60.

It must stand in the water, and will not rust.

Drawings and a full description sent to all parts of the world, free of postage, by addressing the general agent.

JAMES M. EDNEY,
56 John street, New York City.

SEED, PLANTS, &c.

LAWTON OR NEW-ROCHELLE

BLACKBERRY PLANTS!!

PRICES REDUCED!

THE subscribers announce to their friends and customers that they have now

OVER SIX ACRES
OF THE
GENUINE LAWTON (or New-Rochelle)
BLACKBERRY PLANTS,
under cultivation, and in good condition.

They are therefore prepared to fill large orders the coming FALL and the next SPRING, at the following reduced prices:

One Thousand Plants	$125 00
One Hundred Plants	15 00
Fifty Plants	8 00
Two Dozen Plants	4 50
One Dozen Plants	2 50
One Half Dozen Plants	1 50

☞ Good Plants for setting, of a second size, will be sold for $100 per 1000 Plants, or $12 per 100 Plants.

N. B.—All Plants ordered of us will be taken up and packed with the greatest care, and under our own personal supervision.

Of the many thousands sent out by us last year, we have heard very few instances of failure, notwithstanding that they have been forwarded to *every part of the country, and to California, with perfect success*, and the setting out has often been entrusted to unskillful hands.

Printed directions for setting and cultivating are sent with every package. GEORGE SEYMOUR & CO.,

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN
AND
NURSERY,

On the American River, 3½ miles from the Steamboat Levee,
SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of the varieties—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

The Finest and Largest in the State, embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most reliable sources in the East, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being

CORRECT AS TO NAMES AND VARIETIES,

are as Perfect as is Possible to Make them.

In the department of

Shade and Ornamental Trees,

We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, Warranted Pure and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish gratis to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

AMBROTYPES, PHOTOGRAPHS, Daguerreotypes and Melainotypes.

VANCE & CO.,
Corner of Third and J streets,
(Hiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerreotypes** and **Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,

The California Farmer.

SAN FRANCISCO, FRIDAY, APRIL 23, 1858.

Agricultural Premiums.

The following is one of many letters which we are daily receiving, in regard to the Premiums offered by the State Agricultural Society, for the coming year. We are aware that it would be impossible for any Executive Board to prepare a schedule of premiums that would be perfetly satisfactory to all persons, or that might be in reality just in all the several relations which the thing for which the premium is offering holds to the community or its interests; for these relations are not fully settled as yet. But of one thing we are certain, that as Agriculture is the *basis* of all the wealth and prosperity of our State and Nation, it is imperative that the Premiums upon Agricultural products and Agricultural implements should have precedence *over all other interests*; and that in a just and equal ratio to their value as a commodity of use and trade, or their value in preparing the soil, depositing the seed, or in harvesting the crop, so should be the bounty or the Premium offered.

We have noticed the great inequality of the lists the past two years, and have spoken, talked and written upon the subject, but the changeable nature of the government of the Society, which requires *new officers every year*, and the various influences brought to bear in the election of the officers, having reference to the *place where the Fair is to be held* rather than the great success of the cause, has and will prevent that degree of progress and success which we trust will attend the future years of the State Agricultural Society of California. We know the cause has earnest and true hearts laboring in it the present year, and we can only join and labor on in spite of imperfections, hoping the day is not far distant when the officers of the Society shall be continued in office according to their capacity for its duties and devotion to its interests, and they to be aided and assisted by a State Board of Agriculture who shall be permanent, and who shall have a general and special superintendence of this great interest over the whole State.

Believing the great majority of the present Executive of the State Society to be men willing to do all in their power to carry forward the work another year, we await their plans in confidence and hope, and when we know them we shall approve or disprove, as we believe them to be good and useful, or otherwise:

—

Editors Farmer: Intending, as we do, to contribute our respective mites to swell the exhibition at the State Fair, and having at heart the manufacturing as well as the agricultural interests of the State, and moreover having the honor to belong to the Association, we hope our remonstrance against the unequal and disproportioned Premium List, will not be deemed as proceeding from other motives than a desire for equal and exact justice, so far as is possible to attain it therein.

We have no desire, and neither do we believe it necessary, to compare the relative value or importance of the several departments into which the useful and ornamental arts are divided, as we have all confidence in the officers of the Society. We simply wish to inquire, if the same reward or testimonial should be given to the exhibitor of a costly, bulky and *important* agricultural machine, as is awarded to the maker of a bed-quilt or a specimen of embroidery. We do object that a billiard-table, and a thrashing, reaping or grain-sowing machine, should ever appear to be held in the same high estimation as to occupy the same rank and place in the premium scale. It is a wise regulation of the Society that "no premium will be awarded for articles not produced in California." We feel justified in saying that few outside of the business of manufacturing, and especially that branch connected directly with Agriculture, are aware of the intensity of the conflict which exists between cheap *labor* at the East and the *capital* of importers here, and our own workshops in California. It requires all the ingenuity, skill and efforts of their proprietors to sustain themselves, and in some instances they are forced to abandon their enterprise and yield the field to those whose occupation *merely* is to *buy and sell*, and who do not conceal their hostility to home manufactures. Others on the contrary, are successfully engaged in them, with fair prospects of ultimate success.

Now we submit to you, if in view of the importance of Agriculture as the foundation and mother of all arts, and which is deservedly placed in the first class of the premiums in your schedule, should not also embrace "Agricultural Implements," for these next to the soil, are indispensable to its prosecution; and instead of the merely honorary medal, affixed to the several implements, they should receive their premium in money, with the option of the successful exhibitor, if necessary, to receive its value in a medal or a book. Manufacturers.

An Editorial Guest from Honolulu.

It affords us pleasure to note the arrival of Henry M. Whitney, Esq., Publisher and Proprietor of the Pacific Commercial Advertiser, published at Honolulu, Hawaiian Islands. It is a pleasure, also, to speak of the excellence of that journal, the value and correctness of its reports, and the interesting details of its commercial summary, embracing as it does much matter of importance to the business men of California. We hope that during the stay of Mr. Whitney among us, our merchants will testify their appreciation of his labors by a generous addition to his list of patrons. Mr. W. stops at the Tehama House.

Welcome to you, brother, and success to your labors.

Parlor Plants.

Ladies that cultivate these pet plants within doors should bear in mind that the climate of California is far different from that of the old States. A little thought and observation, and they will perceive how much better they grow in the open garden than in the confined air of the dwelling. Mothers and daughters mourn over their roses, geraniums, and other choice gifts of friends, if they see a leaf fade or a bud drop, or a plant sicken and die; but they forget that the rose and the geranium are the best *health thermometers* in the world, and that where a plant will not thrive and do well, that room is unfit to live in. Either the light, the air, or temperature is unfit for the delicate organization of the human heart and lungs. The leaf of the rose that pales and drops from the stem, is the better portion, the lungs of the plant; and if the air it inhales is impure, it must sicken and die, unless restoratives are applied or the plant changed to a better place; and so with mortals.

Mothers worry for the pet plant that lives but a season (the gift of dear friends), but they forget, alas too often, those plants perennial, aye eternal, that are entrusted to them, they will bloom forever if rightly trained; but to the rose and geranium. Now is a season when all plants will do well, even better, in the open air. With us roses, geraniums, lilies, heliotropes, camellias, and almost the entire class of plants used as parlor plants, grow best in the open ground—witness the fine gardens of B. Davidson, Esq., and others on Sutter street, the gardens of Capt. Macondray, on Stockton street, of J. B. Roberts, Esq., near by, and hundreds of other beautiful gardens over our city. Plant out your gems say we, if you have ground of your own; if you have not, and only rent a small spot, then sink the pot in the ground, three inches below the rim, and then you can water freely *after nightfall*, and by carefully pruning and shaping your plants, you will keep them in a healthy growth, and free from insects, and their beauty gladen your heart, while their purer fragrance will greet your senses.

There is as much difference in the health, strength, beauty and fragrance of a rose that has been carefully nurtured in the open air, from that grown in the house, as there is difference between the sallow complexion, dull eyes, listless step, action, voice, and laughter of a girl that has been reared in a close room, upon dainties and fashions, and one that has been out chasing butterflies, gathering flowers, sweeping the dew from the grass at daylight, as she drank her cup of milk from the cow while it was warm.

Plant your pet flowers then in the earth; give them air and water, all in due season; and send out the bright-eyed girls to play in the dirt, to nurse and tend them, and each and all shall, in their season, send into the home a tribute of fragrance and song that shall make the heart glad.

The City of Stockton.

A brief visit to this city, the last week, gave us a glance at her present condition, which is much improved since we were last there (some three months ago).

Stockton is steadily advancing on the road to prosperity and fame. Business, though quiet, is healthy: the merchants are doing well; the mechanics are fully employed; the authorities are improving the streets; the schools are in good condition; the churches are well attended (particularly so at the present time); the gardens are in splendid order; "new homes" are going up in every direction; the fountain, or artesian well sends up its sparkling waters in phantastic shapes; the fruit crop promises a plenteous harvest; farmers are doing well; and the people look happy: for there is perfect health everywhere, the doctors and apothecaries being the only ones that talk of dull times, or look "down in the mouth."

Our stay being very brief, we only had time to *peep* into the gardens of Mr. Weber, to "Rose Cottage," Drs. Holden and R. K. Reid. To the two last mentioned gentlemen we were much indebted for an abundance of flowers and kind attentions. We shall speak of each of these gardens elsewhere.

For many kindnesses from many friends, and for the generous spirit manifested for our enterprise, we render our grateful thanks.

We noticed the new mansion of Col. Manning, recently of the Weber House, the New Academy of Dr. Collins and Lady, the fine dwelling of Mr. Hunt, and many other new buildings, which are so many tokens of that prosperity auguring permanency. It is such sights that give us hope for the future greatness of this finely located and healthy city.

Observatory and Telescope on Telegraph Hill.

We spent a little time the past week in this Observatory, and although it was somewhat foggy, the scope within reach of the telescope presented a beautiful scene. In a clear morning the view must be grand, and we should suppose that hundreds of our citizens would visit the Observatory at early morn, catch the breath of the freshening breeze and feel the glow of health, which would be received by an early ascent of the hill.

The telescope occupies a very commanding position, and from thence you have a clear view of the following places: Santa Clara, town and country adjacent; San José, Union City, San Lorenzo, San Leandro, San Antonio, Oakland, the San Pablo Vale, the Bay of San Francisco as far up as Mare Island, Alcatraz Island and its inhabitants, the Golden Gate, and all the fine hills of our own environed city. We commend a morning stroll to this elevated spot, both for health and enjoyment. Parents should take their children there, and point out these places, and make them familiar with the geography of our county, and its surroundings.

"Rose Cottage," Stockton.

A most appropriate name for a pretty cottage and a happy home, completely embowered in fragrant roses. How brief the time since the rose was first brought into cultivation around the cottage homes of our cities, and yet how rapid its diffusion, how general its cultivation. how vigorous its growth. Their brilliant colors, their fragrant breath, and their gorgeous beauty are but equaled by the love they inspire for the pure, the good, and the beautiful.

Among the many happy places we visited when at Stockton, was one upon the bank of the stream that makes up to the city near the steamboat landing; it was the home we have named above; a cottage completely shrouded in the very choicest of roses. At this residence we met with a hearty welcome from those who were at home, and spent a brief time most pleasantly within this fragrant bower. Among the varieties growing with remarkable vigor, we noticed Gen. Lamarque, the best white known: its strong branches, in two years, had grown 20 and 30 feet; the proud Chromatella, the superb Souvenir de la Malmaison, Devoniensis, Madame Laffay, Triomphe de Luxembourg, Geant des Batailles, Safrano, and many others known as the choice gems among roses. The collection was large, the roses carefully and very handsomely trained, both as standards and climbers. Many of the blossoms were of wonderful size; the lady of the house informed us one had measured *six inches* in diameter. Can our rose-growers in the East equal this in out-door culture? This collection equals anything we have seen in our State, both for their excellence and beauty. Having enjoyed a brief visit, and received most kindly attentions and an armfull of superb roses, and learning from Col. Huggins and his lady, that no name had yet been given to their beautiful residence, we felt it due to such a home of floral gems to name it "Rose Cottage." It well deserves the title, and we trust it will ever be known as such in years to come.

Captain Weber's Garden.

This is one of the first spots cultivated in the San Joaquin district. These famous grounds are like an island of beauty. Capt. Weber has been prodigal of his wealth in improving his grounds, until he has the finest in all this section of country. With a public spirit most commendable, he has laid out broad and handsomely shaded walks around his entire grounds; these are filled with fruit and ornamental trees, and here the citizens are free to enjoy a promenade, a privilege that should be so esteemed as to induce them to care for and guard it, and not, as is often the case with the recepients of such favors, cut and deface the beauties they enjoy.

The mansion of Capt. W. has been greatly improved within and without, and in addition a handsome conservatory is to be added, to hold the large collection of choice plants now scattered in profusion around the mansion. Mr. Weber has his grounds finely designed, the centre of the garden full of choice, budded rose trees, of different hights, and grouped in handsome forms. The fruit trees hang full of young fruit, especially the peach. The trellises upon which are trained the vines, are in good taste, and the vines are setting full of fruit. Water is now conducted over the grounds by means of pipes, and then thrown over the whole garden, by means of hose and pipe, in copious showers. *This is the very best way to irrigate.*

As we entered the hall of reception, we noticed upon the winding staircase that led above, upon every step, a plant in full bloom. The large number of them thus displayed presented a grand appearance; it was something new, and we could but appreciate it and attribute it to the lady that presides within. The pleasant time we have spent at this place will not be forgotten; the kind reception and courteous attention of the lady of Capt. Weber merited, and will receive, our gratitude. We regretted the absence of Capt. W., but hope our next visit will find him at home.

New York State Agricultural Society.

By a letter received from Col. B. P. Johnson, Secretary, we learn that the annual meeting of the above society was held on the 10th February, with a full attendance of farmers and others interested in agriculture, from all parts of the State. Gov. King and Hon. M. P. Wilder, late President of the United States Agricultural Society, were present, and occupied seats with the Presidents in the Speaker's chair of the Assembly Chamber, which was kindly granted the society for its annual meeting. Many interesting discussions were had, and the meeting was one of great interest. The following list of officers were chosen:

President—Hon. Wm. P. McCoun, Queen's county.

Vice Presidents—Edward G. Faile, New York; C. S. Wainwright, Duchess county; Herman Wendell, Albany; H. White, Saratoga; Joel Turrill, Oswego; F. M. Rotch, Otsego; William Johnson, Ontario; E. S. Dibble, Genessee.

Corresponding Secretary—B. P. Johnson, Albany.

Recording Secretary—E. Corning, Jr., Albany.

Treasurer—Luther H. Tucker, Albany.

A resolution was adopted recommending Mr. Morrill's land bill for agricultural schools in the States and Territories, now before Congress. The next State Fair is to be held at the city of Syracuse, on the 5th, 6th, 7th, and 8th of October, 1858.

Odd Fellows' Ball.—The Odd Fellows of San Francisco will give a grand ball at Musical Hall, on Monday evening next, that day being the 39th anniversary of the introduction of the Order into the United States.

Insects upon Fruit Trees.

In another column will be found a letter from Samuel Norris, Esq., upon the same subject as the one following. It is a very important subject: as complaints come to us from various sections of the State of the same evil.

As we have practical men from all States and countries, and many of them must have known of the depredation of the *Aphis* upon the foliage of the tree, we would ask their aid in giving us their modes of ridding the trees of this evil.

It is well known that *tar*, or any other application to the body of the tree, will not hinder their ascent. They are a winged insect, consequently, fear no obstruction. If any one will watch them, they will learn this. Various applications, such as sulphur, tobacco-water, and whale oil soap, dissolved into a wash, have been applied, the latter we think the best—say, two pounds to a pail of water; yet, one of the *very best* remedies we ever yet knew, was the syringing with a force-pump with pure water—the "drowning" process. One of "Paxson's continuous acting force-pumps,", and with the hose attached to wash thoroughly the whole tree (and this can be done easily by means of this pump and hose attached), in this way, we believe, the pest can be driven from the tree; at all events, it will remove the mass of them, and greatly benefit the tree, by washing their slime off.

We ask attention from all who suffer and reports from them. The annexed letter, and that from Samuel Norris, Esq., deserve attention. We shall reply further to this matter, hereafter, only remarking that it is not the *ant* that does the mischief: but the *Aphis*, the ants only visiting the tree in search of *food*, the *Aphis* being a delicious morsel for them. The ant is in a measure the destroyer of noxious vermins that feed on the vine and fruit tree.

—

Santa Rosa, April 16th, 1858.

Editors Farmer: About Feb. 17th, last, I planted a number of fruit trees; among the variety were some plum trees, which leaved out very nicely, and seemed to thrive until some species of bug, about the size of a pea, infested the leaves, which they almost wholy eat up or destroyed. Upon the same trees, there are vast quantities of small ants, both upon the leaves and tree. Whether these insects both combined in destroying the young leaves, I do not know. Can you inform me, through your paper, the means of destroying these insects, or how to preserve the trees from their ravages? By noticing this in your paper, you will much oblige a subscriber.

Lawton.

The Aphis.—This destructive insect is now in his element, and will be found among the foliage of the grape-vine, on the rose-leaf, and upon fruit trees.

"The aphis, called in zoology the puceron, vine-fretter, or plant-louse. This insect is furnished with an inflected beak, and with antennæ longer than the thorax. In the same species, some individuals have four erect wings, and others are entirely without wings. The feet are of the ambulatory kind, and the belly usually ends in two horns, from which is ejected the substance called honey-dew. The species are very numerous."—[Encyc.

We ask the careful attention of our orchardists to the appearance and depredations of this animal. We call attention to letters on the subject of the ant on fruit trees, in this week's issue.

Artesian Well at Stockton.

This is beyond all question, the finest artesian in California. It has reached a depth of 1,003 feet, and comes gushing up some eight feet in the full-sized tube, from which it spreads into many streams through the perforated fountain-head, and, as it breaks into its jets, appears like so many brilliant and transparent diamond globules. These, by their beautiful appearance, chain the eye of the visitor for a long while. It is, indeed, a magnificent *jet d'eau*; and although the entire cost may have been some $15,000 to the city and and its inhabitants, it will add to the health, beauty and prosperity of that city more than *one hundred thousand*.

We trust another year will not pass without having that splendid square around the City Hall inclosed with a high and substantial fence, and the grounds planted with trees of such a character as shall reflect credit upon Stockton. A *public square* should represent the *taste* of the citizens where the ground-plot is laid: but if the *Plaza* of San Francisco is an evidence of *public taste* there, we would rather not say much to its praise. This square is a disgrace to those who designed and planted it; it looks more like a farmer's clothes-yard, than the *Plaza* of the Commercial Emporium.

We hope to see it improved another year.

Stanford Brothers, Oil and Camphene Works.—Those who deserve the greatest and best patronage of our citizens are those who are doing most to build up California, and give a permanency to her trade and commerce, and to give stability to her manufacturing, mechanical and agricultural interests. Every good citizen, whether he be merchant, mechanic, or farmer, should bear in mind that in the use of his own patronage, he exerts an influence for or against California. If he is careful to give preference to home industry, he builds up: if otherwise, he retards the onward progress of our State. Let him look to this, if he values his own prosperity: for he must stand or fall by it. Messrs. Stanford Bros., now pay out $1,000 per month to mechanics and laborers, in sustaining "home industry," and ought therefore to deserve a greater patronage than those who do little or nothing for the workingmen of California: for this money, distributed among workingmen and their families, goes back to the tradesmen, thus making all prosperous. Merchants, mechanics, farmers, look to this question. Whenever you see a man or men giving steady employment to the industrials, give to such your trade, in preference to all others: for, by so doing, you build up the State. Messrs. Stanford Brothers are doing much for these great interests, and deserve well of our community. They are also old Californians; and as merchants of long standing, they have the name and reputation among the highest in our land.

To Our Readers and Correspondents. We take great pleasure in calling the attention of our readers to this number of the Farmer.

Grace Greenwood speaks to her friends in that pleasing and graceful style, which will ever make friends and win attentive readers. We have another letter of deep interest from her pen, for our next issue.

The several valuable letters from our various friends and contributors, will be found worthy a perusal.

Agricola becomes, as it were, the "herald of nature," and calls to us as a sage to listen to the voice of nature. We have from his prolific pen for our next, "Woodman, spare that tree," a most valuable communication.

We have the promise of an interesting story from a valued correspondent of former months. One of those writers that awake deep interest. We hope to give the theme to our readers soon.

Several articles were necessarily crowded out, among them the Athenæum. Alta's reply, Fruit Season, Vance's new Galleries, etc.

A Few Words to Mothers.

The Mortality Among Children.—American mothers know, to their sorrow, that *cholera infantum* or summer complaint, is one of the most destructive diseases of our climate. There is probably no country in the world where the mortality among children bears so large a portion to the sum total of deaths as in the United States. About one-third of the weekly interments registered in the city of New York may be classed under the head of infant mortality, and from May to November the majority of the young children who die are swept off by diseases of the bowels. We do not wish to speak harshly, but it cannot be concealed that much of this wholesale destruction is caused by carelessness, over indulgence, and improper treatment. Unripe fruit and other unwholesome aliment, is generally the primary cause of summer complaint, and the administration of drastic purgatives and other pernicious drugs too often lead to fatal results. Under these circumstances we shall make no apology for expressing the belief, that any case of cholera infantum or diarrhœa in the adult stage of life, however violent in its nature, or whatever its origin, can be radically cured by the use of Holloway's Pills.

In saying this we are merely repeating, it is true, the general opinion of the world; but in adding our personal declaration to the great mass of testimony which has been accumulating during twenty years, we may, perchance, more immediately interest our own circle of readers, than if we confined ourselves to outside evidence. If but one mother acts upon the suggestion, and one child's life is thereby saved, we shall not have written in vain.

The rapidity with which favorable results follow the exhibition of this remedy, in all affections of the stomach and bowels, are justly considered phenomena in medical practice. The scientific explanation of these phenomena belongs rather to the medical professor than the editor of a newspaper, and it has been fully given by the distinguished inventor himself. Cholera Infantum and its kindred diseases are caused, immediately, by undue irritation of the sensitive membrane which lines the bowels, and upon that coating the pills exercise a most soothing and healing influence, carrying off, by their mild, laxitive action, the acrid and pungent matter which produces and aggravates the disease, and invigorating the intestinal vessels as well as assuaging their excited action.

The season when this class of disorders is most prevalent is commencing: "forewarned is forearmed," says the proverb, and should our article induce parents to pay more strict attention to the diet of their children, and to adopt the most certain means of cure, in cases where bowel complaint has actually set in, we shall at least have accomplished some good. "Dr. Diet and Dr Reriman," says a quaint writer, "are the best physicians in the world; but we must beg leave to place Dr. Holloway in the same category and to recommend his pills as the best and safest medicine, for a complaint which annually leaves as a token of its ravages, so many vacant places by the domestic hearth.—[N. O. True Delta.

Permanent Cures in all affections of the throat and lungs are constantly being made by Wistar's Balsam of Wild Cherry. Great as is its reputation, its works are greater. Many physicians speak of it in the highest terms. None genuine unless signed I. Butts on the wrapper.

May Day.

"The merry May hath pleasant hours and dreamily they glide,
As if they floated, like the leaves, upon a silvery tide;
The trees are full of crimson buds, the woods are full of birds,
And the waters flow to music, like a tune with pleasant words."

THE glorious "gala day" for spring is near at hand, and we trust that it will not be permitted to pass without a general observance. It is a day that should be kept by all who love the beautiful in nature; all who love flowers, children, home and happiness. It is a day linked with more true and innocent recreations, than any day of the year that is accustomed to be publicly observed. We wish we could awaken a higher and a deeper interest for this day; we wish parents would regard it more, that fathers would break away from their business, and joining the mothers of their little ones, give it to truthful affection and pleasure.

If this could be done, they would find that the health of their children would be improved, and the characters of their loved ones exalted. We trust the Public Schools will unite and make it a general "Jubilee Day," when parents, teachers, and children, may meet and exchange kind courtesies, and thus advance the general happiness. Our next issue being on the last day of April, we urge this matter now.

Permanent Business Houses.

"IN union there is strength." The wisdom of a good merchant is made manifest by the various plans he pursues to make his business *permanently* prosperous. There is but little wisdom or shrewdness in the man who dashes headlong into a speculation, that if it turns against him, he is ruined, his only chance of gain being that one streak of luck. True wisdom shows itself in well laid plans that secure a permanent and reliable trade from the best sources.

We have not looked idly on the business men of this our great Emporium. We *have* taken notes, and inscribed them in memory's ledger, to be ready when the account of our thoughts and action is demanded. And we have to notice one at the present time.

The House of S. H. Meeker & Co. is of long standing, known far and wide over our State, and known too in the most favorable light. No house stands higher. We are advised that they have purchased the entire stock, business, and good will of the old house of Cisna, Wand & Co., thus bringing directly into their own control a large and valuable addition to their list of customers. They have also secured the services of Mr. Wand (one of that house), who has been long and favorably known to the business community of this State. In the present condition of the business of San Francisco, we look upon this move as a very wise act. It indicates a knowledge of business that says emphatically, the *profits* of two large concerns will add up better than one, especially when we can receive the whole influence of both, with but the expense of one additional aid and that in our favor. But there is another feature that we see, and we speak of it in this connection, for it is but another evidence of business wisdom: S. H. Meeker, Esq., was an old Sacramento merchant. There was the house of Meeker & Co., at Sacramento; recently, the same grand move was made there in the union of the houses of Meeker & Co. and Stanford Brothers, thus uniting two of the largest and most influential houses in Sacramento into one, and thus, with the rents and expenses of one establishment i. e., for services, the entire business and influence of all combined must necessarily be vastly increased: for with this increased capital, purchases can be made with greater advantage, and consequently customers can be better served, and thus the house of Stanford & Brother & Meeker, of Sacramento, may be looked upon with pride as a house of great business capability and integrity, with ample capital to back it. And the house of S. H. Meeker, of San Francisco, another house whose name, fame, influence, and mercantile integrity and ability to serve their patrons, equals any upon our coast.

STRAWBERRIES.—This delicious fruit now comes into market more plentifully, but as yet it smacks strong "ov de monish," $1 50 per pound, equal to one quart. The number of acres, however, cultivated the present season in this vicinity, gives promise to furnish us by and by with them at two bits, if not less. Oakland will be the capital place for strawberries, any way politicians may vote. The committee that were sent from the Legislature should have asked leave to make a second visit there in strawberry time; they could have spoken in another sense than sight if they had done so, especially if they had visited the *eighteen acre* garden of Wolf, Lusk & Co.; for though they had been as hungry as a *wolf*, they would have had a *lusk*ious time of it.

SALE OF BLOOD STOCK.—We would call the especial attention of all who feel interested in the improvement of stock, to the sale of blood animals, which is to take place at Sacramento, on the 15th day of May, at the stock market there. From our personal knowledge of Mr. Long, who went East to select the stock, and from the character of the stock to be sold, we do not hesitate to say, it will be the *first* and *best lot* yet put up for public competition, and we hope there will be a large attendance and generous prices. Let it be borne in mind that at this sale you see the stock you buy, and know its character, and avoid all the risk and trouble of importing, by securing the best at once.

UNIVERSAL EDUCATION.—A movement is on foot in several of the Australian colonies for the establishment of a system of universal education similar to ours. The colony of Victoria has already secured the right of universal suffrage, and they are now moving for the twin measure of universal education.

☞ **Blood Horses.**—Those who have BLOOD HORSES that they intend to offer the present season, to improve the stock of the country should make it known through our journal, if they would reach all Stock Raisers.

DEPARTURE OF JONAS G. CLARK, Esq.—This gentleman, the head of the large furniture warehouse of J. G. CLARK & Co., took his leave of California, by the Golden Age, for the purpose of perfecting his plans for a more extended business in the coming autumn. Mr. Clark was accompanied by his family and other friends, that will make the trip a pleasant one. A very pleasant scene, and an unexpected one, took place on the evening previous to his leaving. As he met his workmen in his workshop to leave his last directions, he was surprised to find himself surrounded by the entire body of his employés, and to receive at their hands a very beautiful cane, most superbly mounted by rich-veined quartz, and the bands and chased work of the most elaborate workmanship. It was a costly yet merited tribute of esteem from industrious workmen and other faithful employés of this house to their employer. The gift was privately prepared, and the presentation was prettily and most kindly done. The result will bind the givers and the receiver in closer bonds of friendship. We join the many other friends of this gentleman in wishing him and his lady, and friends, a pleasant trip, happy meetings of kindreds and friends, a prosperous absence and a speedy return to the many that will gladly welcome them back.

NEW BRICK MAKING MACHINE.—We were shown by Mr. Buckley, in Halleck street, the patent of a new brick making machine, recently patented, and imported from Boston. It is provided with a rotary mill for grinding and preparing the mixture, which is then pushed forward by machinery up a plane surface, resembling the bed of one of Hoe's patent steam presses, which then rises in the same manner as a form does under similar circumstances, and comes with forcible pressure against an upper form, provided with molds of the requisite sizes, by which the bricks are pressed and cut out This operation performed, a lever is then touched, and the new-pressed bricks are ejected in front of the machine exactly as a sheet of paper is thrown from a Hoe's press. In fact, with the exception of the grinding portion of the machinery, it is, in all other respects, an application of the principle of the printing press.—[Herald.

REAL
Carolina Sweet Potato.

THE undersigned, having more of the CAROLINA SWEET POTATO sprouts than will be necessary to plant their ground, now offer them for sale

To those unacquainted with this excellent Potato we can say, that we believe they are destined to supersede all others in this country, because of their superiority in looks, flavor, and keeping. If placed under shelter, where they will not freeze, they will keep sound during the year, as we have proved by keeping the few we had, during the winter of '56-'57, without the loss of a single potato; and, during the past winter, we kept a thousand pounds in perfect order, by simply piling them on the floor of a loft; and, on plowing up the old patch, we found two potatoes that had remained in the ground all winter, without rotting, one of which, with some others, we are keeping, and can now be seen at our place, on the telegraph road, four miles from Oakland.

On any loose, mellow soil, with ordinary culture, they yield from one hundred to two hundred sacks per acre; three pounds per hill is not uncommon, when planted two feet apart each way.

SPROUTS can be sent, by Express, to any part of the State, but all orders must be accompanied by cash.

Price, five dollars per hundred. Now ready at the FARMER office.

RUMFORD & BROTHER,
9-15 OAKLAND, Alameda county, California.

SPLENDID BLOOD STOCK.
A RARE OPPORTUNITY
FOR
PURCHASERS OF FINE STOCK.

The undersigned, having determined to return to the Atlantic States, at an early day, proposes to offer at
PUBLIC AUCTION,
the entire lot of
FULL BLOOD STOCK,
which he has imported from the East, within the past two years, together with their progeny.

This collection was selected by himself, personally, from the very best stock-raisers in the Eastern States, and he is prepared to show the pedigrees of all the animals, so as to secure to purchasers the satisfaction of having pure stock.

This collection consists of fourteen head, as follows:

The noble Bull Calf, "SNOW BALL," by imported Bull "Bob Letcher"

"KENTUCKY BELLE," the finest heifer that could be purchased in Kentucky, and which is admitted to be unsurpassed. Sire, imported bull, "Prince Albert."

"LADY JANE," 3 year old heifer, bred and raised upon the farm of the Hon. Henry Clay. "Lady Jane" has a BULL CALF by her side, of rare promise

☞ In addition to these I shall offer:

One two-year old BULL, two YEARLINGS, and COWS, COWS with CALVES, and other YOUNG STOCK.

This entire lot of animals was selected by the undersigned for the express purpose of improving the Stock of the State, and was driven over the Plains with care. It was the best Stock that could be procured in Kentucky. Full pedigrees will be furnished at the sale to all purchasers.

Every information needed, relative to the Stock, will be cheerfully given by the undersigned, where the Stock can be seen.

The sale will take place at the
Horse Market, Sacramento,
On the 15th of MAY, at 10 o'clock, A. M.

S. W. LONG,
PUTO CREEK, Solano county.

P. S. Information of the Stock, its character, value, and reference, can be had at the CAL. FARMER office.

To Teamsters and Others.
PATENT
ANTI-FRICTION
AXLE-GREASE.

THE season of internal communication with the Mining Districts having again opened, the subscribers take the opportunity of thanking their numerous customers for the extensive patronage given to their
PATENT AXLE-GREASE
during the last five years, and beg to say that no pains will be spared, in its future manufacture, to sustain its widely spread reputation as
The Best Lubricating Medium
for Coaches, Drays, &c., ever introduced into California.

HUCKS & LAMBERT,
Inventors and Sole Manufacturers,
NATOMA STREET, San Francisco.

NOTE. One application of Hucks & Lambert's Grease will enable the heaviest teams to perform the longest journey without requiring the axles to be re-greased on the road; and further, as the Patent Grease works free from coomb or gum the draft of the horse is very considerably lightened—a great desideratum in a long journey, or over a heavy road.

☞ To be had wholesale of S. PILLSBURY, Manufacturers' Agent, 37 and 39 Battery st., San Francisco.
v9-15

EMERY'S JOURNAL OF AGRICULTURE.—This is the title of a new weekly Agricultural Journal, published by Emery & Co., Chicago, Ill., No. 11 of which came to hand by last mail, and from the general appearance, it certainly reflects great credit upon the enterprise and ability of its publishers. We notice an addition to the editorial ranks in the person of Chas. D. Bragdon, Esq., long and favorably known while connected with the Prairie Farmer. With this united ability and assistance, the paper cannot fail to become a welcome guest at the fireside of every Western farmer. We hail with pleasure, a journal which shall become the true advocate of the wants and interests of the great West, in the advancement of the noble science of agriculture. We wish it the most ample success.

FINE DAIRIES.—A correspondent of the Times on a visit to the ranch of that brave old pioneer and worthy man, G. C. Yount, Esq., in Napa Valley, says: "What interested me very much was his dairy. The building is very large and commodious, situated at the foot of a mountain, from which flows a pure stream of water; the floor of the building is laid with hard brick, and the arrangements are such that the stream can be turned in upon the floor, which it cleanses perfectly every morning; the same stream turns a water-wheel, which affords power for two large churns. One hundred and twenty cows furnish milk for the establishment, which turns out one thousand pounds of cheese per week, besides large quantities of butter. Altogether it is one of the finest dairies I have ever seen.

HOLLOWAY'S PILLS are admitted to be the greatest alterative medicine in the world. Their effect upon the system is not violent, but mild and painless and the facility with which they regulate the disordered stomach and bowels, and restore the animal fluids to a healthy, life-sustaining condition, places them immeasurably in advance of all other internal remedies.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

A Rare Chance for Farming!!
SHERIFF'S SALE, TO FORECLOSE A MORTGAGE.
A RANCH
in Contra Costa county, near "Marsh's Landing" on the San Joaquin River,
WILL BE SOLD,
On SATURDAY, May 8th, at 12 o'clock, M.,—at Court-House Door, Martinez,

Formerly known as
"FULLER'S RANCH,"
situated on the banks of said river; six feet above the highest rise of water; contains about 350 acres, nearly all cultivated, and splendid Crops of Wheat, Barley, Rye, Indian-corn and Broom-corn, Vegetables, Fruit Trees (over 1000) of every variety, with many varieties of Grapes—nearly all in bearing condition. The whole Farm inclosed with a good picket-fence. Together with Dwelling-house, Farm-house, Store, Blacksmith-shop, Barns, Stables, Corrals, and other buildings.

Said Ranch has been under cultivation for the last five years, and is well calculated for raising early vegetables for market; including both wet and dry land; many parts of the upland heavily timbered; the dry land very warm and early; about 50 acres meadow, a part of which is under cultivation, and can be all irrigated or overflowed by holding a gate, and drained by closing.

The location is altogether one of the pleasantest, healthiest, and most desirable situations in the country, either for Farming or Stock Raising, being well watered and a large range of unoccupied land adjoining it.

Titles perfectly satisfactory.

Address, or inquire at Office California Farmer.

[Sac. Union, and Stockton Republican, please copy, and send bill to this office.]

SPECIAL NOTICES.

☞ **HOUSEKEEPER WANTED.**—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.

The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.

A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings two numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing; a Vineyard loaded with promised fruit; a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).

Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.

All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14tf

☞ **THORBURN'S Preliminary Wholesale** CATALOGUE OF VEGETABLE SEEDS, *of the present year's growth*, will be published on the 20TH JULY, and will be mailed to Dealers and others requiring Seeds in quantities, inclosing stamps for return postage.

J. M. THORBURN & CO.,
19-tf 15 John street, New York.

☞ **Wigs! Wigs!! Wigs!!!** — BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.
v8-13 1y 233 Broadway, New York.

☞ **A. W. FABER'S LEAD PENCILS.**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not failed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York."

E. FABER, Sole Agent
v9-1 6m 133 William street, New York.

THE HAIR! THE HAIR!!

WHAT Lady or Gentleman would be deprived of a beautiful head of Hair, when by the use of LYON'S KATHAIRON such an one can so easily be had? Too much value cannot be placed on a fine head of Hair—not only as an adornment to the person—and no person is well dressed without well-arranged Hair—but, also, as intimately connected with the general health of the body—for this connection is much closer than is generally supposed. The KATHAIRON preserves and beautifies the Hair, making it soft, curly, and glossy; and by its cleansing and invigorating properties, gives tone and elasticity to the whole system. Sold everywhere for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
15 1m *San Francisco, California.*

☞ **Wistar's Balsam of Wild Cherry**—The following letter from Rev. Henry Wood, of Concord, N. H., editor of the Congregational Journal, speaks volumes in favor of WISTAR'S BALSAM:

CONCORD, N. H., March 2.

Messrs. Seth W. Fowle & Co—Gentlemen: Two years ago, a sudden and violent attack upon my Lungs confined me to my bed for several weeks, and, when I recovered, I was so much oppressed by difficulty in breathing, that I was often unable to sleep or rest upon a bed by night. The suffering was extreme, and, judging from the inefficacy of the remedies used, I supposed the disease incurable. Being persuaded to try a bottle of WISTAR'S BALSAM OF WILD CHERRY, without confidence in its efficacy, I found the difficulty almost entirely removed before one bottle was used up. Sympathy with my fellow-sufferers induces me to make this public statement, and recommend the article to others similarly afflicted.

With respect, yours truly, HENRY WOOD.

None genuine unless signed I. BUTTS on the wrapper.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 15-1m

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**
Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of
WILLIAM A. BATCHELOR,

HOTEL
INTERNATIONAL.
San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a
FIRST-CLASS HOTEL,
in every particular. The present
Lessee and Managers,
A. S. HALEY,
JNO. J. HALEY, and E. R. ROBINSON,
with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the
FIRST RESPECTABILITY,
showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most
DESIRABLE STOPPING-PLACE
For Families or Single Gentlemen,
during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, LESSEE.
ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

10-3m S. H. MEEKER & CO.

Ladies' Department.

THE BABY.

BY T. CORBEN.

Nae shoon to hide her tiny taes,
Nae stockin' on her feet;
Her supple ankles white as snaw,
As early blossoms sweet.

Her swrinkled dress of sprinkled pink,
Her double, nimpled chin;
Her puckered lips and balmy mou,
With na one tooth within.

Her een sae like her mither's een,
Twa gentle, liquid things;
Her face—'tis like an angel's face—
We're glad she has nae wings!

She is the budding of our love,
A gittie God gied us;
We maun na love the gift ow'r weel—
'Twad be nae blessing thus.

Letter from Grace Greenwood.

PHILADELPHIA, March 14, 1858.

EDITORS FARMER: You can hardly have had a milder or more agreeable winter over on your side, than we have enjoyed here. Half of the time, but for the unpicturesque rectangularity of the streets, and the unpoetical cleanliness, newness, and primness of the houses about me, I should have imagined myself in Italy, instead of Philadelphia. Days we have had in mid-winter, which awoke in my heart importunate longings, which I had believed effectually hushed, if not quite crushed, for morning and evening walks on the Pincio, to behold the dome of St. Peter's blaze back the greeting of Phœbus right royally, or to watch the deepening and waning splendors of the sunset; such sunsets as are seen no where, let jealous Americans say what they will, out of Italy; that land, that sky which the sun leaves with loving reluctance, with caresses of light and embraces of all-pervading glory. Perhaps you will say that I should except California; and I have heard that you have sunsets that are aerial representations and symbols of the incalculable riches of your gold-mines, and of your purple seas of prairie blooms, rolling languidly in the breeze. But while California is to me an "undiscovered country," I must stand by the old stand-by, Italy. But to return: in these strange, unwintry days, my blood has been stirred with renewed longings for wild gallops over the desolate compagna, its turf of a sort of grayish brown, like a dull morning sky, but broken here and there by early tokens of spring, purple streaks of crocuses and anemonies, and blue rifts of violets; for strolls about the princely gardens of the Borghese, and the Pamfili-Doria, under immemorial pines, over lawns that laugh with a festal, jostling multitude of flowers. Back to my heart came vivid memories of golden days, spent among the hills and cascades of Tivoli, or on the borders of the little mountain lake of Albano, pic-nicing on the green precipitous ridge, which seemed to me like the rim of some Titan's drinking-cup; of days syent at Frascati, and Tusculum, and of merry donkey-rides up and down their flowery lanes; of days spent at Grotta Ferrata, at Veii, amid the baths of Caracella, and by the fountain of Egeria. Thus day after day, scene after scene, swept over me the flood of delicious memories, like a soft wind blowing off shores of orange and myrtle, to greet the chilled and weary voyager. Such visions I had of "the Eternal City;" the grand old mother eagle, leading armies and the march of conquest no longer; blind, maimed, dying, but still brooding over the world of poetry and art; visions of a dome, reared heaven-ward, like a mountain; of Cyclopean structures, spoiled by a hundred wars, hollowed out by conflagrations, till they yawn toward the sky, like the craters of extinguished volcanoes. Often has risen before me a certain tall palm, which stands in some palace or convent garden, and can be seen from all parts of Rome. A sad looking tree I used to think it, though so erect and proud, like an exiled or captive soldier doing compulsory duty; a solitary Mameluke, standing sentinel over the city of "the Infidel."

But it is little that this southern winter has witched me back to Italy; has given me luxurious dreams of rest and passionate yearnings for the beautiful. It has done more and better for others. To the poor, to invalids, it has been God's care and mercy, descending in a long succession of mild and sunny days. Assuredly the elements have not been in league with the "hard times;" and however we may reason, we all must *feel* that the unseasonable sunshine came from the same affluent, fatherly hand that of old rained manna upon the perishing children of Israel, and that the soft, balmy air came by His command, who "tempers the wind to the shorn lamb."

Spring has opened beautifully, yet we can but fear that a few storms which have lost their way among the clouds, or fallen asleep in some arctic "cave of the winds," will fetch themselves round, or rouse, shake themselves, and be down upon us yet.

Speaking of the arctic regions reminds me of almost the only book of mark which has appeared this season, *Dr. Elder's Life of Kane*. This is a carefully written, appreciative, and conscientious work, showing everywhere the warmth of personal friendship, but by no means presuming on a like feeling in the breast of the reader. Indeed, Dr. Elder's scepticism in regard to the appreciative sense or spirit of his readers, is sometimes rather unpleasantly obvious. He seems to have sat down to his labor (unquestionably a labor of love), with the uncomfortable impression that there were those bent upon putting ungenerous constructions upon his facts, and upon disputing his hero's claims to full hero-worship.

Dr. Elder's style seems hardly a happy one for a work like this, designed for a large circulation among the people. It often lacks simplicity and clearness, though it sometimes rises to strains of genuine eloquence. In passages, it is singularly involved, almost unintelligible; but it has always an air of earnestness, and you feel that the author's *thought* is clear enough, that only its verbal medium lacks transparency. The words are long and uncommon; if not themselves strange to us, found in strange company, and confusing us with odd combinations and unmatured marriages. These things distract one's thoughts from the story, wonderful as it is; sometimes a verbal felicity or quaintness throws the mind off the scent of interest, or a curious alliteration, or a bit of characteristic colloquialism, trips up the heels of the most eager attention. It makes one realize, as never before, how marvelous a career was that of Kane, to see it compressed into two hundred and fifty pages of biography. Young when he died, he had wrung from life its most costly experiences of knowledge and suffering. His course was a long gantlet of perils and diseases. All unfriendly physical elements, all extremes of climate, all pestilential "powers of the air" had their fling at him, first or last. It is almost bewildering to follow him as he zig-zaged over the world, self-driven, on the quests of science and adventure, each more perilous than the last. His motto seems to have been: "go where duty calls and danger dares."

How swiftly the scenes of this strange life-drama pass before us—"dissolving views" in which more than half the world is pictured. The curtain rises on a dear home scene—the city of Penn, the classic ground of the "Declaration"; then follow scenes of bold boyish sports and adventures—then of quiet University life, and now we look down the long melancholy aisles of the Hospital; now we see the good ship Brandywine touching at Madeira, and now, smooth southern seas roll away, before a stately Brazilian city; now a royal pageant, the coronation of an Empress, fills the scene, and anon the Andes loom above us, dwarfing all human grandeur. Now the scene shifts to India—to the cave-temples of Elephanta and Karli, and the jungles of Ceylon; and now we behold the black volcano of Tael, vomiting sulphureous fumes, like a safety-valve of the infernal regions, and see the hero let down by a bamboo cable, hundreds of feet, into the crater, like a plummet sounding the frightful abyss. A scene in the "flowery land" of the Celestials follows, and we catch a glimse of the quaint temples, the gaudy palaces and bell-hung towers of Canton. They vanish before the heaven-piercing peaks of the Himalayas; and now, down the scene roll the broad waters of the sacred Nile. Now stretches before us, from horizon to horizon, the tawny level of the desert; now tower the Pyramids, encircled by sand-waves, slowly rising with the ages, patiently climbing toward the far summits, to whelm them, as seas have whelmed mountains. Now smile before us the plains of Greece, the glorious battle-fields, the sacred mounts, the ruined temples of that "holy land" of freedom, poetry, and art. These pass away before stupendous Alpine hights, mailed with glaciers, and armed with gleaming ice-peaks. These pass, and the eye sinks to the hot sands of the African coast—Plutonian shores of barbarism and slavery. Welcome after this are the green hills and flowery wildernesses of Mexico. But now comes the realm of Arctic desolation, deathly cold, and eternal silence, stretching out vast and white and terrible, like the ghost of a perished world. This drear night-scene lingers long in a frozen stillness, but melts at last into a tropic day, all warmth, luxuriance and murmurous life. And here Death, who throughout this fearful drama has menaced the hero in a thousand forms—has gnashed at him in hungry waves, clutched at him from the chasms of glaciers, hissed at him from the abysses of volcanos, struck at him in battle, besieged him with pestilences, blockaded him with icebergs—now steals upon, from among the flowers, and in the disguise of sleep, overcomes him at last.

I have made out, without intending it, a little epitome of this "strange, eventful history," but I hope it will only serve to whet, not dull, your appetite for the "BIOGRAPHY," which, aside from the little faults I have been so ungracious as to point out, is an admirable book.

Very truly yours,
GRACE GREENWOOD.

Old Maids.

THE following letter from Edith, upon the theme of Old Maids, will find a response to its truth in every noble and generous heart. How much better it is to find the noble and generous qualities of our fellow creatures and encourage them, than be ever watchful to detect their errors and failings. We hope some of our fair friends will come out in defense of "old Bachelors." There is much good that can be said of them:

As the subject of "Old Maids" is up for discussion, I must take sides with "Sallie," as I have already committed myself in an article which recently appeared in the Mountain Messenger, where, in writing of an old maid, I said:

"Now, Aunt Lizzie, as she was familiarly called by every body in the neighborhood, both by young and old, must have been an exception to old maids, in general, or they have been maliciously scandalized; for a kinder heart and a sweeter temper are seldom found than she possessed. And was anything the matter in the whole neighborhood, from a chicken with the croup, to a person with a broken limb, Aunt Lizzie was sure to be sent for, to which calls she invariably answered 'I will be there presently;' and soon she might be seen with her capacious satchel on her arm, well filled with specific herbs, and, umbrella in hand, walking rapidly along in the direction she was wanted; for she seldom rode unless the distance was more than two miles, or when great haste was necessary, at such times she might be seen mounted on her little old white horse Toby, passing along with such gentle steps as would not have endangered a cargo of eggs, had they been upon his back.

"A sick room was thought hardly endurable without she was there, and the invalid would say that no one else could make the gruel, or fix the pillow, half so well as Aunt Lizzie; and surely there was something in her cheerful voice and pleasant smile which infused new life and hope, not only into the sufferer, but into all who came within their magic influence."

Such was Aunt Lizzie, and I must own, she has somewhat prejudiced me in favor of old maids. * * * * *

One summer afternoon I put on my sun-bonnet, and started out across the meadow to go and see Aunt Lizzie. I found her at home, and smiling as usual, with her floor scrubbed to almost marble whiteness, sitting with a pan of apples in her lap, which she was preparing for pies; for if she was an old maid she had a nice little home of her own, and by hiring a man to work a few months in a year, she kept a few acres of land in fine cultivation, and her garden abounded, not only with all kinds of culinary vegetables, but with many beautiful flowers. Here too, she had growing her medicinal herbs, which she had gathered from the great laboratory of nature, which, with her kind hand to administer, had so often been the means of curing many afflictions, both of body and mind; and no doubt it was this consciousness of having done good, that added to the sweetness of her look and tone, as she looked up and saw me, and said, "dear child, I am glad you have come to see me; lay off your bonnet and put it on the bed there, and get a knife and help me with these apples, and I will soon have some tea ready, for I see (glancing at the sunlight on the floor), that it is near five o'clock.

Soon she had her little table set out on the floor, spread with a fine white linen table-cloth which had been ironed in diamond folds, and set with her pink tea-set; a beautiful ball of yellow butter with a rose stamped upon it stood in the center, while beside it sat a dish of ripe currants, and clustering around these were pink radishes, green salad, some nice slices of dried beef and a plate of hot rolls, which constituted the evening meal I sat down to with Aunt Lizzie; the dessert consisting of a warm apple-pie, eaten with cream; of this we partook, after she had read a few verses from the Bible, which was her custom, instead of asking a mere formal blessing. And while we were eating, the little birds from the rose bushes in the yard trilled forth their sweetest notes, and hopping upon the window sill peeped in familiarly, as if conscious that no harm could come to them there. * *

I hope Alice will no longer continue to hate old maids, or that she will give us a better reason than because they got their toes frost-bitten by sleeping alone. EDITH MONTRESSOR.

[For the California Farmer.]

Sunday Thoughts.

[THE annexed communication from our much esteemed correspondent of the Excelsior State will be received as from one whose heart is rightly attuned to harmonize with the beautiful in nature. No one can read these glowing thoughts and not love the truths they so happily portray:]

"This is the bud of being. The dim dawn
The twilight of our day."

Life here is but begun; it never has an end, but souls are fashioned for eternity. Since, then, "all on earth is shadow," and substance lies beyond, let us consider for what we live; what aims, what purposes, and what pursuits here fill our thoughts; for what we labor, and to what we tend. Mind, in its infancy, is content to dwell upon trifles, and is amused by every changing scene, but it early awakes to the realities of life, and thenceforth follows with untiring vigor some favorite object, and anticipates some speedy goal, where happiness shall stand waiting to reward its pursuer. But alas! how few tread in that path which only leads to unalloyed felicity; how many lay up treasures here, forgetful that soon the shifting sands and chilling winds must scatter and blight even earth's fairest fruits; what numbers are shipwrecked on the shores of Time, who might safely have anchored in the haven of Eternity! We were not placed within this beautiful world, to float like a fleecy cloud over its horizon; nor yet, like a meteor, to shine and expire; but, like the stars, our light should be immutable, shining amid the dark places of earth, shedding radiance over kindred hearts, which sorrow hath darkened, and illumining with beams of divine knowledge, the "souls of men benighted." Each son and daughter of earth has a mission: a talent intrusted to his or her keeping, of which an account will soon be required, and even while Conscience seems to sleep "She reconnoiters Fancy's airy band, a watchful foe." "Listening o'erhears the whispers of our camp,"

"Unnoted notes each moment misapplied,
In leaves more durable than leaves of trees
Writes our whole history, which Death shall read
In every pale delinquent's private ear,
And judgment publish to more worlds than this."

That man who lives for Earth alone, has never tasted life. Unless his thoughts have soared on high, and held communion with his God; unless his soul has melted into praise, and his heart been filled with earnest supplication; unless from Nature's page, his eye hath caught the inspiration of a hand divine, he may have breathed and seemed to live, while yet his soul was dead.

Let the heart of such an one become enlightened; let him derive but faint rays from the source of divine wisdom, and how quickly the tenor of his life will change. The soul that had wearied and sickened of life, that had tasted the cup of all earthly bliss, and everywhere found that the dregs were bitter; the eye that had grown lusterless, and failed to discern surrounding beauty; the voice that had lost each gentle tone, and the ear that was dead to harmony; these all are renovated, and, as it were, created anew, capable of deriving earnest joy from the contemplation, in every form, of the handiwork of God. Life seems no longer a desert waste, but each moment comes fraught with a holy mission, and, from the brooklet's tiny source, as from the broad expanse of ocean; from humble hillock and towering mountain, from the mighty elephant, and from that king of beasts, whose roar is so terrible, so also from each variety of insect, and from the most fragile flowers of earth, he learns a lesson from the great "I AM," whose presence is everywhere manifest. He looks on Earth's perishing robe in Autumn; he sees her shrouded in the snow-wreaths of Winter, and calls it a type of his own decay; but when Spring, with bright sunshine and balmy breath, revives, and restores to fresh beauty all nature, calling wild flowers forth from their hidden retirement, and awakening the leaves to new verdure and life, then he, too, looks forward with hope to the future, when his soul shall be clothed in a robe of immortality. Then, indeed, he realizes that this is not his home; that his aims, pursuits, and purposes are not confined to Earth, but that the seeds he scattered here will only attain full fruition in Heaven.

"Oh, then, Thy kingdom comes! immortal power!
What though each spark of earthborn rapture fly,
The quivering lip, pale cheek, and closing eye,
Bright to the soul, thy seraph hands convey
The morning dawn of Life's eternal day."

J. L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness of Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Principal Office and Manufactory, No. 96 ARCH STREET Philadelphia, Pa.

For sale by all Druggists in California and elsewhere.

MACHINES AND IMPLEMENTS.

TREADWELL & CO.,
IMPORTERS,
N. E. corner California and Battery streets,
SAN FRANCISCO,
have now landing, and will receive by every packet from New York and Boston, the most extensive assortment of
FARMING MACHINERY
and Implements,
ever brought to this market, embracing all the
Latest Styles and Improvements,
which will be sold at lowest rates.....consisting in part of:

REAPERS:

MANNY'S COMBINED REAPER AND MOWER, WITH WOOD'S IMPROVEMENT.—These justly celebrated Machines have become too well known in California to require more than a simple announcement where they can be had. We are sole agents for the Pacific coast, and none genuine elsewhere.

McCORMICK'S REAPER....This universally approved Reaper we keep constantly on hand, and are Agents of the Maker.

KETCHUM'S COMBINED REAPER AND MOWER....This Machine is now very popular—having been greatly improved the last two years.

BURRALL'S IMPROVED GRAIN REAPER. This Reaper cuts six feet, and is one of the strongest and most durable Machines in use.

SEYMOUR AND MORGAN'S REAPER; without the Raker attachment and all late improvements.

HUSSEY'S REAPER....Baltimore make.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.
BOGARDUS' 2, 4, and 6 horse do do.
FIELDS' 2, 4, and 6 do do do.
EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times. Extra points and parts can always be had.
This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.
Do. CUTTERS—Several sizes and kinds; hand and power.
HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.
GRANT'S GRAIN CRADLES—In cases of one dozen each.
Do. FAN MILLS. Also, the Boston Mill.
CORN SHELLERS—Hand and power.
Scythes and Snaiths—best steel Scythes and Lamson's Snaiths.
Hay and Barley Forks—2, 3, and 4 tine; of best makers.
Carpenter's Patent Wire spring-Tooth Horse Rakes, 10 to 15 feet long, with wheels, and seat for driver.
Ox Yokes and Bows—all sizes.
Churns—Thermometer, Dash, and Cylinder; also, Dog Powers for do.
Garden Barrows. Cauldrons and Furnaces. Cultivators.
Horse Hoes. Seed Sowers. Harrows.

Field and Garden Seeds

Of every description, c/a the Isthmus—this year's growth (1857).

Steam-Engines, 4 to 15 Horse Power.

Suitable for Ranches or Mining purposes.

Portable Flour Mills and Mill Stones—Noyes' make. All sizes, 16 inch to 4 feet.

Belting, Bolting Cloth and Packing—All kinds and sizes of the above.

HARDWARE—The best stock in the State.

MINING GOODS—All kinds in use.

COOPERS' AND TANNERS' TOOLS—Full assortment.

Baling Wire—Annealed.

Hay Rope—Best Manila.

Grindstones—Best dressed Nova Scotia; from 6 inches to 4 feet diameter, packed in casks in sawdust.

Wire Fencing—A neat article for inclosing Gardens, Henerics, &c. Also, for Ornamental Garden work Grape and Rose Trellises.

Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c. &c. 9v4

Letter from Michigan.

[From our regular Correspondent.]

Contrast between the weather in the old States and California—Maple Sugar Season—The Panic passing away—Want of Employment—Idleness rebuked—Recital in Religion—Disposition of the people to emigrate to California—Prices of Produce—Low prices there—Want of a market—The interest felt in the State for the FARMER.

TALLMADGE, Mich., March 12, 1858.

EDITORS FARMER: March has come and Old Winter begins to slacken his icy grasp, and I hope ere long to see genial Spring, with its birds and flowers, which are always welcome to me. While we are snuffing the chilly winds of March, without flowers, and the merry song of the robin and bluebird, spring, *balmy* spring, is unfolding with all its beauties in California; the atmosphere is filled with the fragrance of opening flowers, and birds are sporting mid green leaves and sweet blossoms. I hope ere long to enjoy your lovely seasons. I have heard it *hinted* that we were having a California winter; it *may* be genuine, but I think it somewhat *spurious*. Think of a California winter, with not a green leaf, or flower, to be seen, mother earth frozen six to eighteen inches deep, and snow flying so you scarcely could see. Where the snow is off here the ground is bleak and bare, and not a flower to be seen for a *month* yet, except in some conservatory or gentleman's parlor. If *this* is a California winter, I have seen several of them.

The past winter has not been as severe as the two previous. January was very mild. Some commenced plowing, and several made some Maple Sugar. Have had very little snow, and few hard freezes. February, however, was cold, with six to ten inches of snow; the mercury falling below zero four times, once 2 degrees below, twice 12 and once 14 degrees below, at 6 AM. March has been some milder. On the 5th the mercury was 6 degrees below zero at 6 o'clock, AM; but warmer since with chilly winds. The farmers about here are preparing to reap their harvest of maple sugar. The old Maple tree sugars up this community considerable, and affords a *sweet* reward for labor. Who doesn't love maple sugar and molasses?

The panic is subsiding, but money is tight, tighter, *tightest*. There appears to be very little of it in circulation here, but the New Yorkers are boasting of their full coffers, and I hope when navigation opens business will revive, and set more capital afloat. Business has lain nearly dormant the past winter, and many have been thrown out of employment; very little done except to procure the necessaries of life, and many have found it up-hill work to do *that*.

The Live Yankee *can't* be idle, must be up and doing. When he can't be making *money*, he will (sometimes) be doing better; consequently we have been having great revivals of religion, and many have been added to the church in nearly every part of this State. Some have started this spring for California, and several more are making ready to go from this county. The most of them are young men, and what is *worse*, some are *leaving* their families and going for a term of years, get a "pile," and then return and enjoy the fruits of their labor. Success to them.

I am going to California to make or grow a "pile" of luscious *fruits* and *fragrant flowers*, and in order to *fully* enjoy the *fruits* of my labor, wife and babies will accompany me, Providence permitting.

Our markets are very dull: Wheat 75 cents per bushel; corn, 30 to 40; oats, 25 to 30; barley, 45 to 50; beans 50 to 75; hay per ton, $4 to $6; green apples 50c to $1 25 per bushel; dried do, $1 50 to $2 00; potatoes, 15 to 25c; onions, 50 to 75; beets, carrots, and parsnips, 25 to 37. Very hard to get cash for vegetables at any price. I grow them for market, so I get my patience thoroughly tried in finding sale for them. I never have known the time before, that I could not sell all, and *more* than I could produce, at good and paying prices; but now they will scarcely pay for the labor and seed used in cultivation, to say nothing about the time and vexation in marketing. I dont despond yet, for the FARMER comes along every mail to cheer me up. How I love to peruse its spacious columns, filled with the thoughts and experience of the Agriculturist, and the welcome contributions of that noble band of Lady Correspondents. Success to them. May they sustain each other on life's uneven way, and meet where all is peace and calm repose.

Respectfully, O. N. CALDWELL.

The Flour and Grain Market.

The remarks of the Commercial Reporter upon the grain and flour market, have been so generally correct and so important, that we refer to them with pleasure. The Reporter has given some very important facts, going to show that (as we have all along said), *we have a good stock on hand*, ample and sufficient to supply all wants and leave a good surplus at the opening of the harvest.

Few journals of our city have spoken fearlessly and correctly on this important matter—the flour speculation. The Call, Herald, and Commercial Reporter, have given sound views upon the subject; yet very few persons could have known of the secret means used to create a fictitious price, for personal gain. Until recently, the darkest shades have only appeared. The recent frauds in Lick's flour, and that which has just been announced by Braye Brothers, upon the Alviso mills, together with the various repacking frauds, all go to show that this speculating mania must end in fraud to save from pending ruin. But ruin must come sooner or later; it has always thus ended. We would ask, where is that purse of $10,000, made up to buy the thousand barrels at $11, to start the market? Who paid up cash on the square? Who turned over grain and flour as their proportion? Come gentlemen, are such things done in the closet? if so, they shall be "proclaimed upon the house-tops."

What has been the result of this speculation? But injury and ruin! Where is there a farmer, miller, or merchant, that will not say the whole thing has been injurious? Injurious to them and to the State. See the public advertisements of Haxall flour; look to the arrivals, and that which is on the way—over *twenty thousand barrels* of flour, and thousands of bags of grain! Does not such a thing work injury to our State and all its interests? We say, emphatically, it does; and those that are the originators of it are the men that derange and injure the prosperity of our country.

We have no interest to serve but that of the people, and therefore we dare speak freely. We ask attention to these hints, by those who now suffer, and must suffer, by reason of the state of things brought about by this unnatural speculation.

Wholesale Produce Report.

Austin's Patent Wooden Fan WINDMILL.

THE undersigned has secured his PATENT for the NEW WINDMILL invented by him recently, and which by every test yet made, has proved to be most completely successful.

This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.

This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.

THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.

Any person of common ability can put them up, as directions for so doing go with them.

JESSIE A. AUSUIN, PATENTEE, STOCKTON, Cal.

N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. (14) J. A. A.

Landscape Gardener.

THE undersigned offers his services as a Landscape Gardener. Designs made for Parks, Lawns, Carriage Drives, and fine Garden Plats, in the latest style of Gardening, for city or country.

The advertiser is permitted to refer to Editors of Farmer where letters can be left for him by those that wish his services. J. TAYLOR, 5 corner Stockton and Sacramento streets.

To Let, With Board,

ONE SUITE OF FOUR ROOMS, suitable for a Family—in VIRGINIA BLOCK, corner of Stockton and Pacific streets. Possession given immediately. References exchanged. 12

☞ 3000 Pounds California Tobacco.—We have samples of superior TOBACCO, raised in California, grown and cured correctly, by a person from Kentucky. It is the best lot ever raised in the State, and is worthy the notice of Cigar Makers. For sale at the FARMER office. 6

MISCELLANEOUS.

WHEELER & WILSON MANUFACTURING COMPANY'S SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

H. C. HAYDEN, AGENT, 157 Sacramento street (between Montgomery and Kearny) 9v-7 3m

JOHN D. ARTHUR, IMPORTER AND JOBBER OF **Agricultural Implements,**

Woodman, Spare That Tree.

MESSRS. EDITORS: In the FARMER of the 26th ultimo, W. S., on the Calaveras, gives such a heartless account of Trees, as would induce us to look upon them as so many gigantic weeds, fit only to boil the pot, or be manufactured into some necessary article of domestic use. I am sorry that trees should labor under so suspicious a character. I have a fondness for them. They add much to the appearance of a country. They form a principal portion of the dress in which old Nature invests herself, and in which she seems as young as ever. If we go to cutting them all down, poor Nature will soon be in the same denuded condition as the Jolly Beggars of the poet Burns, after their bacchanalian revels at Poasie-Nansie's. Yet the writer only tells the truth. I do not think he has said anything which is not correct. So we must cut them all down, must we? The fiat has gone forth: we must sacrifice the ornamental for the useful. Gracious Heavens! Is there no alternative? May we not have both?

"If not, oh! grant me this at least,
That I may never be the priest."

Let us cheer up. We have only heard one side of the question. *Audi alteram partem.* Give the trees a fair hearing. If nobody else will plead their cause, I will.

At the first view, it seems wonderful that those uniform laws, by which the indulgent Creator regulates Nature, should in this instance take an unusual course, and that we can only enjoy the blessing of full perfection, by practicing a self denial which does violence to every principle of correct taste. I have always been disposed to bless God for having endowed us with tastes and feelings which constitute correct guides for the uninformed, without the necessity of their waiting till science has come forward, and fully explained the whys and wherefores of every matter. How would the world have got along, had it required to wait without eating till Science had qualified herself to analyze, with a minute accuracy, the roast beef and plum pudding of an Englishman's dinner? the vermicelli of the Italian? or the mush and johnny cakes of our own country? The world would have been a dead man before Science had got half through her lesson. Then again, had we not had eyes and ears, and feelings in regard to heat and cold, how could we stumble along through life by the mere sense of touch only? or not have our noses occasionally frozen, or burnt off, for the want of the convenient personal thermometer with which we have been kindly provided?

While we thank God for having given us double senses, which in every case are approximately to be relied upon, why happens it that in this *solitary case* the very opposite is done? For instead of our taste for the beautiful being a safe guide, it would appear to form a dangerous delusion—Nature, in this instance, having set a special premium on vandalism. But has she? Let us examine the matter.

In a sensible article in the FARMER of June 6th, 1856, as extracted from Hovey's Magazine, the writer says: "Most people comprehend the value of trees for timber and fuel, and their advantages for shade and ornament, but their agency in promoting the fertility of the soil, the humidity of the atmosphere, the fullness of streams and wells, and the salubrity of the climate, is more imperfectly understood. All scientific observers acknowledge that trees condense moisture from the vapors of the atmosphere, and conduct it to the earth. Trees act the double part of supplying the atmosphere with moisture, which they draw up by their roots from the depths of the earth, and discharge in an invisible form through the breathing pores of their foliage, and of wetting the surface with the moisture which they draw down by condensation from the atmosphere. To these influences of forests upon the humidity of a climate, we may reasonably attribute the fullness of the streams in all the parts of this country a century ago, compared with their present diminished bulk. This is a matter of common observation, sustained by indubitable proofs. In the same way may we account for the increasing frequency and severity of droughts, as the population has increased and woods are diminished."

It turns out exactly as I thought it would. Nature is right after all, in implanting in us a desire of the beautiful, and a special attachment for "the good green wood," whether it be that of the Scottish ballad of Gil Maurice, the forest of Nottingham, where Robin Hood and Little John levied tribute from his Majesty's lieges, or the unmatchable wardens of our own California mountains, in groups and groves. Trees perform a *useful part*, as well as being highly ornamental, especially in a dry climate like ours. Let the writer proceed with his argument.

"Mr. Balfour, an English botanist, remarks: When forests are destroyed, as they are everywhere in America by the European planters, *with an imprudent precipitation*, the streams are everywhere dried up, or become less abundant. In those mountains of Greece which have been deprived of their forests, the streams have disappeared. The inconsiderate feeling of woods, or the neglect to maintain them, has converted regions noted for their fertility into scenes of barrenness. The sultry atmosphere and droughts of the Cape de Verde Islands are attributed to the destruction of forests. It is stated that in large districts of India, climate and irrigation have rapidly deteriorated from a similar cause. Dr. Cleghorn remarks, that the conservation of forests is unquestionably a subject of great importance. The physical history of every country proves incontestibly that a moderate extent of forests, especially on mountain slopes, and elevated rocky ground where tillage is impracticable, promotes to a high degree both the agricultural and manufacturing interests of individuals, as well as the physical soundness and productive resources of extensive countries."

After quoting this corroborative testimony, the writer draws the following conclusions:

"Not only the farmer, but every citizen is interested in this matter. Upon the proper condition and quantity of forest, the community must be dependent, not only for its continued supply of timber and fuel, but indirectly for the prosperity of every interest. And unless some measures are used for the preservation of a constant supply of growing forest, large tracts of land now fertile and productive will ere long be converted into barren wastes, and the country will be deprived of its natural resources."

I do not find fault with W. S. for telling us a portion of the truth, but he might have told us the other half of it. A great many people are but too much disposed to cut down trees. We do not require to advert to the supposed inconveniences which accompany them, so much as to point out the overpowering evidence in their favor. It is the province of Art, however, to improve upon Nature, so that we may escape such inconveniences, and reap the advantages which they conjointly put within our reach. Shall we cut down the trees on the plains, and leave those, or plant more on the mountain-sides? I say, be cautious in cutting them down anywhere. It is true, as W. S. shows, and as we knew before, that we cannot grow two full crops on the same piece of land at the same time—one of trees, and one of grain or something else. Nature never meant that we should. But let us recollect that, as well as being highly ornamental, when once trees have got a start, they want but little cultivation, that they tend to moisten and cool the atmosphere in warm countries, and when planted in rows around fields of a proper size, are well worth the ground which they occupy, for the superior climate which is thus provided for those fields. Single rows are seldom enough in California, on account of our coast winds. We ought generally to leave, or make, belts of three or four trees across at least. When the young trees have grown up so as to form a shelter, it may be as well to plant a row or two more on the sheltered side. Afterwards, if we think we have too many, we may cut down those on the windward side which have got twisted and unsightly from exposure, for firewood. As a general rule, we cannot do better than follow the dying advice of old Dumbiedykes to his son, in the Heart of Midlothian: "Be aye stickin' in a tree Jock, it will be growin' when ye're sleepin'."

AGRICOLA.

MILLERTON, April 17th, 1858.

Eastern Items.

Congress has passed Senator Gwin's bill for three additional Land Districts in California, making in all, six, to be located and called as follows: Humboldt, Marysville, San Francisco, Stockton, Visalia and Los Angeles. Immediate steps are to be taken to establish each District, so that pre-emptors may have the facilities of proving up their claims without the expense of traveling to the remote parts where land offices are at present located.

J. S. Mickens, of Texas, has been appointed U. S. Consul to Acapulco.

Gen. Persifer F. Smith has been ordered to Utah, as well as Gen. Harney. The chief command of the army will devolve on the former.

The Postmaster General has made a contract with parties, to carry the mail from St. Josephs, Missouri, to Salt Lake City. It will be carried weekly in four-horse coaches, through each way in eighteen days. A contract has been made also for carrying a semi-monthly mail from Salt Lake City to Sacramento City, through each way in twelve days, and goes into operation on the first of July next. It is also determined to put service on a route from Independence *via* Albuquerque and Tulare valley, to Stockton. This will be run in two-horse wagons. It is with great pride that the present able head of the Post Office Department, contemplates extensive arrangements made to afford mail facilities to the Pacific region. It is stated that the overland mails for the next year, will cost a fraction over one million and a half of dollars.

The Alfalfa or Chile Clover in its Native Region—Chile Wheat.

VALUABLE LETTER FROM THE AMERICAN MINISTER AT CHILE.

The following letter, addressed to G. W. Ryckman, Esq., has been handed to us for publication; it is a letter of great importance to every cultivator of the soil.

SANTIAGO DE CHILE, March 10, 1858.

DEAR SIR: Your letter of January 5th is before me, and I hasten to give you the information which you request me to communicate. About three months since I addressed a brief letter to Mr. Samuel Norris, of Sacramento county, California, at his request, in relation to the cultivation of Alfalfa. That letter, I am assured by Mr. Norris, was, soon after he received it, published in the CALIFORNIA FARMER. The facts stated and views expressed in that letter are believed to be entirely correct, and to it you are respectfully referred for part of the information which you desire. In addition I beg leave to state, that when I arrived here in September last, the green Alfalfa was for sale in the streets of this city, and so far as I can ascertain or discover, is as abundant now in the market as it was in September last. Of course, in this fact we have conclusive evidence that several crops of this grass can be produced in Chile within the year. But, this is not all: I am assured by experienced farmers, that the green Alfalfa will be in the Santiago market for sale until near the close of the month of June, demonstrating the fact that during about nine months of the year, this grass, in a green state and fresh from the field, is for sale in the streets of the principal towns of Chile. I am satisfied from what I have myself witnessed, that on good strong soil, moderately irrigated during the months of July and August, as many crops of Alfalfa can be raised in the Sacramento and the valleys north of it, in California, as are produced in Chile within the year.

The Alfalfa in Chile is generally sown with the red wheat. The first season it advances sufficiently to make good grazing after the wheat is harvested. After the first season, and for four or five succeeding seasons, it will produce at least four times as much to the acre as red clover. The Alfalfa is a very nutritious grass. Animals will not only fatten upon it, but perform moderate labor every day, and remain in good condition. The stalk of the Alfalfa, although much larger than the stalk of the red clover, is so tender and full of juice that animals never leave upon the ground any portion of it. It grows to a greater hight than clover, has a small flower, pink and blue in color, and in the field, when it has attained its full growth, presents a very beautiful appearance.

There is one objection to the cultivation of the Alfalfa, and that is the thickness and length which its roots attain if permitted to grow upon the same ground for a number of years. In relation to this matter I have been diligent in my inquiries, and have arrived at the conclusion that it should be cultivated as the farmers on the Atlantic side cultivate red clover. It should be turned down once in about every three or four years, with a strong plow, capable of severing the roots at eight or ten inches beneath the surface. After thus turning down the Alfalfa sod, two or three crops of barley or wheat should be raised upon it before Alfalfa is sown again. If thus treated, the roots of the Alfalfa will never acquire sufficient length or thickness to make it difficult to use the soil for other purposes. The Alfalfa, like clover, enriches the soil, and ground well turned over after having been in Alfalfa for two or three years, will produce greatly more than an average crop of wheat. The low wet lands along the Sacramento and San Joaquin rivers, I am confident, would, without irrigation, produce several crops of Alfalfa within the year.

Your inquiries in relation to the wheat of Chile are more easily answered. So far, sir, as *smut* and *rust* are concerned, the farmers of Chile don't know what you mean when you speak of either as having heretofore injured the wheat crop in California. I am unable to say positively whether it is the kind of wheat sown here, the climate, or the soil, that differs from California, where *smut* and *rust* do so much injury; but certain it is that the wheat crop in Chile has never been injured by either.

The heads of the white wheat raised in Chile are about the length of wheat-heads in California, but the grain is larger. This white wheat weighs heavy, often as much as 170 pounds to the *fanega*.

The grains of the red wheat, like the grains of the white, are very large and full, and uniformly weighs several pounds more to the *fanega* than the white wheat. The straw of the red wheat is much stronger than the straw of the white, and can be sown on wet low lands. I have no doubt from what I have seen and learned about it, that the red wheat of Chile would produce immense crops if sown upon the low lands bordering on the Sacramento and San Joaquin rivers. I do not wish to be understood (it is proper here to state) as having reference to the *tulé* lands, but to the low bottom lands on the Sacramento and San Joaquin rivers, which are so rich and moist that the wheat sown falls with its own weight before it ripens. The flour of the red wheat, all here agree, makes sweeter and better bread than the flour of the white wheat. The bread when baked has the rich yellow appearance which is given to bread when too much saleratus is used by the baker.

Both the white and the red produce largely to the acre. I have endeavored to obtain other facts in relation to the wheat raised in Chile, but failed. The people here appear only to know that they have sown the same kinds of seed for many years, and have never believed it necessary, or good policy, to look for any other. In Chile, as in all other grain-growing countries, the people, in years past, have been called upon to lament the failure of the wheat crop; but what little wheat the earth did yield in such seasons was found round and entirely free from the effects produced by *rust* on the straw or *smut* in the head.

In conclusion I beg leave to assure you, that it will give me great pleasure at all times to give you any information which I can obtain, in relation to the soil and productions of Chile.

I have the honor to be &c., &c.,

JOHN BIGLER.

Journal d'Agriculture Pratique.

Paris.—Librairie Agricole de la Maison Rustique, rue Jacob 26.

THIS most excellent French Agricultural Journal comes to us regularly each steamer, and we know of no European publication, now published, that contains so great an amount of practical matter as it does. The last steamer brought us Number 3 of Volume 1 of the new series. This journal was first established in 1837, by Dr. Bixio, and continued, since 1850, under the administration of M. J. A. Barral.

This interesting periodical embraces all the principal branches of agricultural economy, giving all the latest inventions, illustrated with handsome engravings.

The climate of southern France being similar to that of California, the reports published annually by the different farming schools in France will save, to our State, a good deal of experimenting, and while we shall endeavor to lay before our readers the most important items published in said journal, we shall never be able to give its full contents, but recommend all farmers to procure the original, even if their knowledge of the French language should not be perfect.

We will take subscriptions, and forward for all who desire to procure this valuable record. The work is issued on the 5th and 20th of each month. Price, $6 per annum.

Pavilion for the State Fair.

We have seen and examined the plan of the Pavilion for the State Fair, which is to be erected upon Cortez Square, Marysville, and we must pronounce it an excellent design; it will be an ornament to the city, and it will be a source of pride and gratification to the citizens to have so fine a structure.

We learn that the city has appropriated $1500 and the county $1500, and the citizens will make up the balance. The building will be something after the style of the Mechanics' Pavilion; it will be 40 by 100 feet one way, and 50 by 120 feet the other; it will be 16 feet in the clear high, with a lofty roof and a dome; the walls will be of brick, built in a substantial manner. This spacious Pavilion will be divided and arranged for the different departments of the Fair.

The Executive Officers of the Society are busily engaged, and devoting much of their time in promoting the various plans in progress to make the exhibition alike creditable and honorable to their city and the State.

TO THE MECHANICS OF CALIFORNIA—*Write these words in gold upon your door-posts.*—Senator Broderick, in a speech that does honor to the man, and honor to California, utters these words:

"*I am the son of an artisan, and have been a mechanic.* * * * * *

They submit too tamely to oppression, and are too prone to neglect their duties as citizens. But sir, *the class of society to whose toil I was born, under our form of government,* WILL CONTROL THE DESTINIES OF THIS NATION."

Let the mechanics and all true working men, take these words and make them their motto; and remember they have been uttered in the United States Senate, by A SENATOR OF CALIFORNIA. *Make them prophetic—make them* TRUE. We shall speak more of this speech, relative to the subject of California interests and labor.

To J. D. Patterson, Esq., the distinguished sheep-raiser, of Westfield, N. Y., for valuable catalogues of his sheep, and samples of their wool, we return thanks. Having been appointed to act for him, we can show his list of prices and samples of wool to all who wish to purchase the best breed of sheep in the country.

Valuable Sale of Blood Stock.

WE would call the special attention of our readers to the advertisement of Messrs. B. & C. S. Haines, Elizabeth, N. J., announcing their sale of Durham Cattle, Horses, Southdown Sheep, Pigs, &c., to take place in June, catalogues of which can be seen at our office. Among the Shorthorns we notice the famous bulls, Lord Vane Tempest 2d, Gov. Tompkins, Dryden, Homer, Sanhican, and a number of choice bull calves, the get of Grand Duke, and Duke of Gloster. O cows, there are Imported Zoe, Red Rose, Nymph, Anna, Gertrude, Sunshine, &c., &c. These animals are especially suited for the California market, and would be valuable acquisitions for our farmers.

In a previous number we gave a notice of a visit made to the above Stock Farm, by our associate editor, before his leaving for California, and the description of many of the animals to be sold, with full pedigrees, will be found there. Quite an addition has since been made to their stock, comprising several head of choice Shorthorns (imported), Southdown and Cotswold Sheep, and Suffolk Pigs, lately arrived from England.

The above sale will take place about the middle of June, and we can encourage all who may wish choice stock to embrace an opportunity rarely offered. Having seen the animals, we can speak of them in the highest terms, as superior to anything ever seen in California. We shall be happy to furnish catalogues to all who may desire, and would suggest that orders sent on by this steamer will be carefully attended to by Messrs. B. & C. S. Haines, for those who may not be able to attend personally.

Any and all information will be cheerfully given at our office, where catalogues can be seen.

The Limantour Claim.

A piece of news I here give, which will I think interest those who hold adverse claims to Don José Limantour. It appears in the "Sainsevain case," decided last week, by the U. S. Attorney General, a patent to which is now in progress for issuing, there is one of the strongest points against the title of Limantour to the San Francisco lands, and is as follows: In 1842, Pedro Sainsevain applied to Governor Micheltoreno for a grant of land adjoining the Mission of Santa Cruz. The Governor referred the petition to the Priest, to ascertain if the lands described within the petition came in contact with the Mission lands. The Priest responded in favor of Sainsevain, and the petition was referred to the Governor, who referred it to his Secretary, Manuel Jimeno, who reported it back favorably. The Governor then ordered the grant to be made. The Lieut. Governor being anxious for Sainsevain to have a good title, asked the Governor "how he could get over that portion of the law that positively stated 'no lands could be granted to *foreigners*, as grants of land could only be made to native born or naturalized citizens of Mexico?'" (Sainsevain at this time was neither.) The Governor, upon satisfying himself upon this point, declined issuing the grant until he (Sainsevain) could become a naturalized citizen. After three years probation he became a citizen by naturalization and obtained his present grant as first and originally applied for.

The grant to Limantour shows it was granted to a French citizen in direct opposition to the Governor's decision in the foregoing case, and by every argument of analogy must be and will be invalidated by the Supreme Court of the United States, when it comes before them for adjudication. If Sainsevain, although married to the daughter of one of the most influential Mexicans in California, could not obtain his land, with all the influence to back him in *contravention of law*, then how possibly could Limantour, a French citizen procure his? It is strange this point was never raised in your courts, as the law on that point is as plain as a pike staff. The acts as I have stated are a matter of record, and I could not pretermit the opportunity to advise your readers of the fact.

I am assured on high authority that the claim can not "touch bottom," or bear the ordeal of passing through the fire of the furnace which sits in one of the lower rooms in the Capitol, known as the Supreme Court, and presided over by one who bears the name of Judge Taney.—[Correspondence of the Globe.

TO THE LADIES OF CALIFORNIA.—The natural desire of every American woman to share in that feminine and noble work, the purchase of *Mount Vernon*, prompts me earnestly and repectfully to address you. In sincere and not presumptuous imitation of the example of the Hon. Edward Everett, I intend to give, at *San Francisco*, for the first time in America, an *Original Shaksperian Miscellany*, delivered by me during my visit to England, at several eminent Literary and Mechanics' Institutions, and to repeat the same in *each city in this State* that I may visit before my departure, the proceeds to be forwarded to the "*Ladies' Mount Vernon Association*," with whom I have already corresponded. I feel assured that my appeal will receive a cordial welcome from the *Country-women of Washington*, who will prove in this, the youngest of the sister States, the truth of that beautiful maxim: "The sky may change, but not the soul, with those who pass beyond the sea." Respectfully,

CHARLOTTE M. S. CONNER.

GREAT FREIGHTS UP RIVER.—Immense freights are now going up river. On Monday 400 tuns went up on the Eclipse, to Sacramento. On Tuesday, the Oleopatra carried up to Marysville 243 tuns, and the day previous 340 tuns were sent up. The freight being now only $3 a ton from San Francisco to Marysville, whereas last year it was $12.

Important Subject of Immigration

That California demands the immediate attention of her citizens to some plan by which the thousands and tens of thousands who desire to come to our State may get here, is no longer a question. The people *must* act, and act speedily. The present week has depopulated our State nearly *two thousand*, and although a goodly number arrived on the last steamer, we are less in population than the week previous, and if the "gold fever" continues, as it is likely to do, and even to increase, our merchants and business men will find that they must act, and in earnest, too.

When it is remembered that the whole press, at the East, are bound to do all they can to prevent another exodus from their shores, and when it is well known that every fact that works against California, of whatever kind, is heralded far and wide, we wonder our citizens sit down tamely, and permit the Eastern press to control the public sentiment, and to prevent, in a great measure, the immense immigration we should receive, if the proper means were used.

But what will Californians do? Who can deny that we are not suffering for an increase of population? And yet nobody moves. All the efforts are made on the other side, and by a few warm friends of California (see letters in No. 14 of the Farmer).

Every State, out West, is moving to secure a population for themselves, and they work right manfully; they subscribe liberally, publish a journal devoted to the cause of immigration, circulate pamphlets, open offices, send out agents, and pour out money liberally to sustain it. But what has California done? Nothing! literally nothing! A few meetings; big resolutions; and then, death to all effort (witness reports from W. T. Coleman, Esq., of New York).

We have taken up the Emigrant Journal, published in the city of Nininger, Minnesota Territory, and we find published a Lecture to Encourage Emigration, delivered by Ignatius Donnelly, Esq., and although expressly prepared to aid that Territory, we ask our readers to substitute *California* instead, and see how aptly it will apply. We give only extracts from the lecture, and also some articles from Eastern papers, alluded to by the speaker to show the opposing spirit of the press East, and these same terms, and even worse, are applied to California to prevent emigration hither.

We ask careful attention to the remarks where Legislative aid is invoked. Cannot some in our present Legislature give the subject a thought? We trust this subject may be again brought before the public mind in a manner that shall prove effectual:

LECTURE TO ENCOURAGE IMMIGRATION.

Under a republican form of government what is everybody's business is nobody's business, and hence matters of the highest moment often lose themselves in mere discussion, through the want of some one to take hold and make them his own. In minor affairs this state of things is excusable, but where circumstances arise that concern nearly the direct welfare of the community, it is the part of every well-meaning citizen to contribute his quota of thought and action to its assistance.

There is no denying the fact that we are all looking earnestly and hopefully to the coming spring emigration—to a new inflooding of that tide of life which has already redeemed us from the wilderness. And as a general thing we all anticipate such a tide. There is a universal belief throughout the Territory that we will receive, next spring, a larger immigration than has ever yet entered Minnesota in any one year. This may be so; but there are certain signs in the horizon, which, to some eyes, seem to betoken otherwise. There is no questioning the fact that the utter disrupure of commercial ties and public confidence which has occurred in the East, and the fearful train of individual disaster consequent upon it, will drive an immense number of Eastern people Westward, during the coming spring. This is a conclusion justified by the experience of former panics, and by the information daily received from the older parts of the country. But this point granted argues nothing for Minnesota. The emigration may be of a degree unparalleled in the history of the United States, and yet it may be directed into such channels as will be of no advantage whatever to the people of this Territory. I think many of my hearers will agree with me when I say that it is evident there is now going on through the columns of Eastern newspapers, a deep laid and systematic scheme to misrepresent and injure our Territory. We can hardly pick up an Eastern journal without coming upon some horrible story of destitution and suffering in Minnesota; some accounts of men, women and children frozen by the dozen; some Indian outrage, or some incredible thermometrical statistics showing a degree of cold under which an Esquimaux would succumb. These things would be amusing, could we but lose sight of their injurious effects on our most important interests; they would be even be more pardonable were it possible to ascribe them to ignorance on the part of those propagating them. We are forced, however, to a contrary conclusion. They are too persistent and too continuous to be accidental. They have no tangible source within the Territory, nor any fact even analogous on which to find a basis. Moreover, the journals perpetrating them refuse to publish the corrections and contradictions afterwards set forth in our own press.

Do my hearers doubt that these causes have already produced serious detrimental results? I will quote an extract from a letter lately addressed by S. M. Cook, of Granby, Mass., to ex-Governor Alexander Ramsey. After some preparatory remarks, he goes on to say:

"Since my return to Massachusetts (from Minnesota) I have become pretty thoroughly convinced that a large emigration will push Westward another spring, and as fully convinced that Minnesota will not receive her due proportion thereof, unless a full effort is made to counteract some of the causes that, just at this time, are operating against her. I have already encountered the agents of the Illinois Central R. R. Co., who are now traversing the Eastern States for the purpose of getting settlers for their lands, and as you are well aware, Kansas has her recruiting officers all through the East. Now, sir, under these circumstances, does it not behoove the friends of Minnesota to enter the fields to assert her claims?"

If we need testimony to corroborate Mr. Cook's assertions, we have but to take up any leading Eastern journal, English, German, French, or Swedish, and we will find some such paragraph as the following:

'*Iowa Moving.*—The people of Dubuque have just got up a pamphlet entitled, 'Northern Iowa, containing hints and information to Emigrants,' which they are arranging to scatter broadcast over the Eastern and Middle States."

Or a column or two devoted to the advertisements of the Illinois Central R. R. Co., setting forth the attractive and healthful characteristics of Southern Illinois; or perhaps a letter from some industrious correspondent in Nebraska or Kansas, detailing in golden style the beauties of those chosen regions; while an editorial squib in the side columns touches up the financial condition of St. Paul, or pictures our unhappy people struggling through the horrors of a Siberian winter.

Can anything exceed in gross misrepresentation and injustice, such item as the following:

"*The Weather in Minnesota.*—The Prairie du Chien Leader says:

'We learn that snow at La Crosse and Winona, last week, was fifteen inches deep; back of Winona it was in drifts eight feet and more; at St. Paul, two feet, and in the pineries four feet in depth. Monday the stage got lost back of Winona, and passed the night on the snow drifts. The passengers suffered intensely. We gather these facts from our townsman, Mr. Robt. Scott, who returned Wednesday evening from the upper country.'"

Or this from one of the principal papers of the East:

"From Minnesota, we have St. Paul advices to the 5th. The mercury marked 22 deg. below zero, and there had been good sleighing for a fortnight. We need hardly say that the Mississippi was only navigable on skates."

Or the following extract from a letter received from Ohio:

"By this time I think you must be satisfied with your experience in Minnesota, and be ready to return. We learn here that twenty-three children have frozen to death in Minnesota during the present winter."

Who is there can believe such reports originate in anything but the most fraudulent and corrupt motives. * * * * * * * * * Or does any man here underrate the potent influence of the sovereign instrument, the Press, now wielded against us? Does any man doubt that the universal diffusion broadcast over the land of their slanders will turn thousands and tens of thousands from our doors? As Shakspeare said of the players, "Better that thou have a bad epitaph after thy death, than their ill repute while living." We all know how sanguine we were last winter of an immense increase in population during the spring of 1857, and during the winter months certainly nothing could have promised fairer. * * * * *

The plain and the direct mode of controverting the slanders of the press is to use the columns of the press in our defence; the refutation will then go wherever the assault has gone. We would be, as the adage has it, "taking a hair off the dog that bit us." But how is this to be done? There are but two ways: the first is by individuals; the second, by the State itself. Let us take up these modes.

The first, by individuals. To this there are two objections. First, there are few or no individuals who could, as times now are, take upon themselves the expense of such advertising, or who, if able, would feel called upon to assume the burden of the defence of the Commonwealth. And secondly, could any such individuals be found, their statements would be looked upon by Eastern emigrants with suspicion and distrust, and he would be regarded as a quack or a sharper, who was practicing upon the credulity of the public.

What then remains? Here is a great community, blessed in a thousand natural advantages and resources, yet traduced and borne down by a combination of neighboring and rival States. Here is a community whose good name is bandied about to the four winds of heaven at a time when she most imperatively needs every intelligent emigrant whose natural proclivities would incline him towards her. She cannot depend upon the chance and random-directed efforts of a few citizens; is she to sit with closed lips, while the momentous hour which is to prove the turning-point of her destiny is passing away?

Gold will open all doors, and the papers that now deny a place to the contradictions of our press, would readily receive any quantity of paid advertising matter from the government of Minnesota. What is to prevent our Legislature from authorizing the preparation of such a statement of facts as will do justice to our advantages, and, at the same time, in no wise compromise the dignity of the State. Let such an advertisement be, not a tirade of poetry and exaggeration, describing an Elysium beside which the Garden of Eden grows dim, but a *plain, honest, sober statement of facts*. We need not run into the regions of fiction or falsehood to array a most attractive host of details. Let us more particularly set ourselves right on the question of climate. * * *

Progressive Agriculture.—The New York Observer says the following good things of Progressive Agriculture:

Under its influence spring up tasty and convenient dwellings, adorned with shrubs and flowers, and beautiful within with the smiles of happy wives, tidy children in the lap of thoughtful age—broad hearths, and acts as well as words of welcome. Progressive agriculture builds barns and puts gutters on them, builds stables for cattle and raises roots to feed them. It grafts wild apple trees by the meadow with pippins or greenings—it sets out new orchards, and takes care of the old ones. It drains low lands, cuts down bushes, buys a mower, housetools and wagons, keeps good fences, and practices soiling. It makes hens lay and chickens live, and prevents swine from rooting up meadows. Progressive agriculture keeps on hand plenty of dry fuel, and brings in the oven-wood for the women. It plows deeply, sows plentifully, harrows evenly, and prays for the blessing of heaven. Finally, it subscribes for good, religious, agricultural and family journals, and pays for them in advance, advocates free schools, and always takes something besides the family to the County Fair.

The Executive Committee of the United States Agricultural Society at the sixth annual session held at Washington, resolved to open rooms there and the Secretary is to be in attendance from November to July, while Congress is in session, and gentlemen present from all parts of the country, and during the interval to have an assistant at Washington to attend to any matters necessary. The commencement of a library was decided upon, quarterly meetings of the Ex. Committee appointed, and a monthly bulletin to be published. These measures are of great importance, giving the Society a place of business at the Capital of the nation.

State Agricultural Society's Reports.

[Continued.]

AGRICULTURAL IMPLEMENTS.

The only Thrashing Machine on exhibition is a model by Mr. Hoag, of Washington, Yolo county. This machine combines many advantages where the weight and length of straw is so great as found in this country. The sieves are greatly enlarged. The straw carriers are simple, easily adjusted; gearing simple, but very strong. Your committee cannot be expected to award a first premium on a mere model of a machine, but as Mr. Hoag's machine is really excellent, and adapted to our wants, we award a special premium.

The Harvester and Thrasher, combined, is an ingenious model of this implement, by Mr. Vevill of San Joaquin county, and shows one more step in inventive progress to this desirable result, while its real usefulness has yet to be tested. We award a diploma.

Reaping Machine, by D. C. Mattison, of San Joaquin county, invented by Mr. Williams, of Stockton. Here the committee had the satisfaction of viewing a machine indeed labor-saving, combining the mower and reaper. Its weight is suspended on wheels of such size that while materially lessening the draft, a greater speed is safely admitted. The gearing is compact and strong, and your committee doubt not that this machine will, in a very short time, become exceedingly desirable and popular. We award a first premium.

None were shown expressly for mowing, but as your committee deem that the same discretion which permits the throwing out of articles not of absolute merit, also admits the extra premium in those of decided merit, we therefore award the first premium on mowers, to the last named machine.

There was more contest for premiums in steel plows, than any other which came within the notice of your committee. Our manufacturers have, in these, done themselves and the State full credit, and where all possessed so much merit, decision became more difficult; and your committee wish to be distinctly understood that, in awarding premiums on these and all other articles, it is on the positive assurance, by the manufacturers, that they were wholly made in California, from the raw material, whether of home growth or in part.

Mr. Thomas Ogg Shaw, of San Francisco, shows a steel plow which excels in model, finish and construction, and fitness for its proposed use. We award the first premium.

Mr. McDow, of San Francisco, exhibits a steel plow, in many points excellent, and appears a strong, light and serviceable implement. We award the second premiam.

Mr. Mattison, of Stockton, shows steel plows, for two or four horses, of excellent model and finish, seemingly combining every requisite in common use, as also of that of a regulator to the depth, under heavy draft, doing away with the wheel in ordinary use. Diploma and special premium.

Mr. Marshall, of Sacramento, shows a steel plow of decided merit. Diploma.

Mr. Marshall also shows a cast plow, with steel shear, known to the committee as a plow of excellent service in moderate depth of plowing. First premium.

In gang plows, here your committee, in the absence of actual trial, find it extremely difficult to pass upon the merits of implements, where all are so decidedly good.

The plows of Messrs. Marshall and Mattison are exceedingly well adapted to general work, in light or broken lands.

Mr. E. D. Curtiss shows a gang plow, with seed-sower attached. Your committee cannot express an opinion on a machine of this complication, without witnessing its operation; and would here respectfully call the attention of the Executive to the importance of provision being made to give trial to implements of novel construction or improved manufacture.

Mr. E. D. Curtiss also shows a Scotch plow, with iron beam.

Mr. Shaw's plow is of higher finish and lighter construction; and will be of excellent service in orchard work, or where grain is plowed in; it turns thirty-four inches, is little likely to clog, can be gauged to depth, and is apparently light of draft.

We award to Mr. Marshall, of Sacramento, first premium.

Mr. Mattison, of Stockton; diploma.

Mr. Shaw, of San Francisco; diploma.

Two subsoil plows, only, were shown in competition for the first premium. That of Mr. Gould, of Santa Clara, is ingenious, and may be valuable in sandy lands, and for orchard work.

Mr. Thos. O. Shaw, of San Francisco, shows a subsoil plow, of novel construction, and susceptible of use for varied purposes, in lightening up potato, corn and orchard lands, with comparative saving of draft and labor. We think this will be found a valuable implement, and award first premium.

A strong, serviceable fanning mill, containing some novelties and improvements in construction, adding to strength and usefulness, was shown by Mr. Thos. Ogg Shaw. First premium.

Mr. Shaw, of San Francisco, shows a harrow, containing sundry excellences, apparently as complete as this instrument has as yet been made. First premium.

Mr. Mattison, of Stockton, shows another variety of the Scotch, square harrow, heavy, and intended for use in strong lands, excellent in its construction. Second premium.

Mr. Thos. Ogg Shaw, of San Francisco, first premium for churn.

Butter-worker and churn, combined, the only article of the kind exhibited; The invention, we think, is original. We award to J. L. Atkins, of Sacramento, first premium.

H. McNally, San Francisco, first premium for cheese press.

Garden wheelbarrow, only one on exhibition. First premium to D. C. Mattison, of Stockton.

For orchard and garden work, a cultivator is shown by Mr. Mattison, useful and valuable where a disturbance of surface equal to light plowing is desired. First premium.

A strong, serviceable implement, volunteer cultivator, is shown by Mr. Mattison. This massive implement requires a strong farm force, and doubtless, on land plowed late the preceding year, will be a most effectual labor-saving implement. It spans seven feet; depth and resistance gauged by wheels and brakes. First premium.

Mr. E. H. Comstock, farmer, of San Joaquin county, shows an implement of lighter but similar construction to that of Mr. Mattison, to which he has made some additions and improvements; his gauge-wheels are also rollers to level the furrows made by the cultivator teeth.

Your committee were much pleased with an implement manufactured by the man who desired its use, and hope our farmers, in many cases, will show a like ingenuity in the adaptation of implements which so varied a soil and climate require. We award Mr. Comstock a special premium and diploma.

Some grain forks, for the taking up of unbound grain, of excellent and strong material and construction, shown by Mr. Mattison, of Stockton. First premium.

Model of a water elevator; also, model self farm gate, shown by Mr. J. Perkins, of San Francisco; of much ingenuity, and if in practice as successful as in model, will be valuable where water is scarce and fencing is expensive.

Of imported agricultural tools, we particularly notice the Boston steel clipper plows, X4½ and X8, from Messrs. Treadwell & Co., of San Francisco; shown by J. L. Palmer. X4½ is a breaking plow for lap furrow, has coulter and wheel, turns thirteen inches. X8 is a stubble plow, turns twelve inches, and weighs seventy-three pounds.

These plows are of desirable pattern, and a great addition to our agricultural implements; and as the importer of choice farm tools is a benefactor to the farming interests, second only to the inventor and manufacturer here, we award diploma.

Thos. Ogg Shaw, of San Francisco, shows a portable cider and grape mill, decidedly valuable, and just the implement to meet a want each year increasing in a ten-fold ratio. Diploma.

Mr. Shaw also shows hoes, potato forks, barley forks, scythes and snaths, corn sheller, self-acting cheese press, a circular straw table, an improved farm gate; all good, some excellent. Diploma.

Messrs. Howlett & Collins, of Stockton, show an importation, manufactured to their order, of Boston steel clipper plows, X½, X4, X8, with wheel and coulter, for two or three horses. These plows have an improvement in length and strength of beam, securing a much greater steadiness of draft and easier application of power. They also show mowing machine, fanning mill, Scotch harrow, cast and steel plows, straw cutters, ox bows, corn shellers, and other articles. The best and the largest show of imported tools. We award a diploma.

H. McNally, of San Francisco, shows a cornstalk and sugar-cane cutter.

Your committee note the exhibition of imported grain drills, with peculiar pleasure. We have, at last, something better than the worthless tools thrown aside years since in other States. There are now offered implements worthy of a California farmer's use, whose more general introduction and use will effect a saving of thousands in our seed and labor.

Messrs. Hoag, of Washington, Yolo county, show Bickford & Huffman's drill, known to the committee to be an excellent implement of economical use, suitable either for planting or broadcast sowing. In the introduction, Mr. Hoag has done our farmers a valuable service. Diploma.

Thos. Ogg Shaw shows a Palmer drill, simple, strong, light; spans seven feet, and is apparently a desirable implement for sowing broadcast or in drills.

W. G. Griffith shows a grain drill, with seed sower attached. This drill is more complicated than the last two mentioned, and is also adapted to spreading grain or lime.

Willow baskets, neither manufactured nor imported were exhibited. Your committee take leave to call attention to this manufacture, for which the demand is constantly increasing.

A horse-power for two horses, exhibited by Mr. Conant, of Stockton, simple, and of easy application to many of the lighter matters of farm labor, for drawing water, cleaning grain, sawing wood, chopping feed, etc., etc.

J. W. Osborn, Wm. Graham, Jas. Frost, S. W. Collins, G. W. Sweezey, Committee.

BEST RIDER.

The rancheros' purse, for the best rider of a wild horse, fifty dollars, is awarded to J.C Glenn.

J. W. O'Neal, Chairman Committee.

PIE MELON.

We, the undersigned committee, beg leave to report the following: That we consider the pie melons of superior quality, and would recommend a framed diploma, for the same, to G. C. Yount, of Napa, as the first premium.

D. J. Staples, R. S. Bates, Committee.

MALT.

The undersigned committee on Malt, would report: That they have, with pleasure, made an examination of a lot of malt, on exhibition, and consider a very superior article. The sample exhibited was from the Pioneer Malt House of Lewis S. Ford, and we would recommend the same for the first premium, a framed diploma.

S. Williams, S. T. Nye, Committee.

MANUFACTURES.

The undersigned committee on Manufactures, would here report, that they have examined a horse-power, exhibited by C. R. Conant, and would recommend it for the first premium, a framed diploma.

They have with pleasure made an examination of a broom machine, made by John A. Wolf, San Francisco, on exhibition, and consider it a superior article, and would recommend the same for the first premium, a framed diploma.

S. Williams, T. Ogg Shaw, Committee.

PAINTING.

The committee on Painting would recommend the first premium for the best ornamental sign painting, to be awarded to Messrs. Hopps & Lougee; and for the best specimen of imitation of wood and marble, to No. 58, Y. Robinson.

W. R. Jefferson, Ch. Committee.

STENCIL PLATES.

We, the undersigned committee on Stencil Plates, beg leave to report the following: That the stencil plates exhibited by J. F. Hall, are of superior workmanship, and are fully entitled to the first premium, a framed diploma.

J. Williams, A. J. Gage, Committee.

BROOMS.

We, the undersigned, have examined the different lots of Brooms exhibited, and award the premium to lot No. 80, exhibited by H. Lusk & Co., of San Francisco; and recommend, as a very superior article of home manufacture, the samples exhibited by E. D. Benson & Co., for a diploma. Lewis M. Cutting, Ch. Committee.

BEES.

The committee, through their chairman, beg leave to report, that they have awarded the premium for the largest collection of Bees, to No. 21, Mr. Buck. A. Shell, Ch. Committee.

The Farms of New York.

The New York Census, says the N. Y. Daily News, gives us many sunny glimpses of the productive fields of this noble Empire State, and leads us into many thriving workshops. The farmers and mechanics of New York are not to be despised when the vast amount of the produce of their toil is counted up by millions of bushels and millions of yards and pounds of manufactured articles. It is singular to remark how the same division of crops which governs the productions of States extends even to their subdivisions by counties. Thus Jefferson county reckons up 428,072 bushels of spring wheat, Rockland but six bushels, and Putnam and Kings counties none. In winter wheat, Livingston county produced 1,094,779 bushels, and Hamilton county but six bushels. Onondaga county excelled in oats, producing 1,015,225 bushels. In barley, as in spring wheat, Jefferson took the lead with 392,648 bushels. Schoharie excelled in buckwheat, producing 169,078 bushels. In corn, as in oats, Onondaga took the lead, producing 907,453 bushels. In potatoes, Washington exceeded all others, harvesting 767,285 bushels. Otsego is the hop county, producing 3,122 258 pounds. In hay, St. Lawrence cutting 139,400 tuns, while New York shows the least, but 157 tuns. St. Lawrence raised most peas, 68,016 bushels. Orleans on beans was first of the counties, with 40,185 bushels. The turnips of Suffolk give her the pre-eminence in this useful vegetable, the yield of the county being 104,103 bushels. The extensive county of Onondaga produced 554,987 pounds of tobacco, rather more than half of the total crop of the State of this renowned plant. In sugar, northern St. Lawrence takes the lead, producing 513,913 pounds, maple, of course.

The total number of neat cattle in the State, in the year 1855, was 2,105 465, of which St. Lawrence had the largest number, 96,408. Of calves, in the first year, there were in the State 311,474, and Chautauque boasted the possession of a plurality, 12,851. The whole number of steers unbroken to the yoke, and bulls, over a year old, in the State, was 577,887. The whole number of working oxen was 144,997. Dutchess taking the lead. St. Lawrence county was richest in cows, possessing 52,161. There were killed in the State, during the year 225,838 beef cattle. The yield of butter was 90,203,073½ pounds—St. Lawrence made most butter, 4 268,409; Delaware was next, with 4,026,525 pounds, and Orange, that we hear so much about, was only the sixth county in butter. Herkimer took the lead in cheese, making 9,068,619 pounds; Oneida, the next caseous county, had about a third of this savory material for rare-bits. Over twenty millions of gallons of milk were produced in 1855 in the State, and Orange county made up for her loss in butter by her yield in milk.

In horses, the State had 579,715. Of swine, over six months old, there were 530,176, while of tender and infantile porkers, shoats, and roasters, there were 533,616. Ontario took the lead of the counties in sheep and wool. The value of the poultry of the State was $1,076,598, and the value of their eggs for the year was $1,306,613. Genesee took the lead in fowl-raising, and Dutchess in the business of eggs. In peaches, Wayne county took the precedence, and in strawberries, Suffolk.

With the comparatively small amount of difference in the climate of the State, it is surprising that there should be such a diversity of production in the various counties and sections. This, of course, gives rise to a prodigious amount of internal commerce, and exchanging in all directions.

Even our farmers are not independent, and the excess of production of one description finds its level by being sent off to the centers of distribution, thence to be sent in every direction, and supply other less favored counties even in our own State. Each county devotes all the energies of its labor and its resources to that plant or produce which is most easily and profitably raised, relying in full confidence that its wants in other respects will be adequately met by the surplus which will roll in to find there a market. As population increases, our noble canal, and that great natural channel of trade, the Hudson, will be more and more occupied by our domestic trade, and our railroad system, before long, must be profitably employed by the local traffic of the country.

Victoria Regia.

Gold and silver fish, it has been proved, are of great imporiance to the perfect development of the leaves, by devouring the numerous aphides and insects that often infest their under surfaces. Hundreds of these fishes, therefore, may be annually placed in a tank soon after planting. The introduction of the *Limnæa stagnalis*, or water snail, has also been recommended, as it devours the slimy and mucous matter that always accumulates more or less in the tanks of tropical aquariums, and from experience of their usefulness in a large reservoir which contains some thousands, their introduction, in a sanitary point of view, would be extremely beneficial.

A novelty respecting the Victoria in England, is interesting. It is the cultivation of the plant in the open air at the exotic nursery of the Messrs. Weeks, at Chelsea, where it was grown, and flowered to considerable perfection during the summer of 1857, in an open tank, protected by an awning; not, however, in such a strictly natural state as the words "open air" may imply, for the water of the tank, it appears, was maintained at a tempreture of 84° or 85° by a circulation of hot water below it. Still, we are far from being convinced that the plant is capable of being grown in the "open air" in England; and the complete failure, too, this year, of the plants in the marble basins of the greenhouse division of the Crystal Palace, tends even more strongly to confirm the opinion of the utter impossibility of attempting to acclimatize a tropical plant of this description.

Sir William Hooker admits that this plant does better in our tanks in the United States, than at Kew. In Philadelphia, we are much gratified to report the entire success of the new Victoria Regia house, lately erected by James Dundass, Esq., at an expense of some four thousand dollars; such liberality deserves more than a passing notice. Mr. John Pollock, his intelligent gardener, informs us that flowers bloomed exactly six weeks after planting, from a root in the new tank, which is 24 by 30 feet; the house is extremely well lighted, and the tank is set out with a variety of healthy plants suitable to the scene; the whole presents one of the most beautiful sights that can be created by the art of man. The great Palm-house, too, has a tropical air nowhere else to be seen here. We feel quite proud of having such costly and well-cared for establishments in our midst, and of such gardeners as Mr. Pollock.—[Horticulturist.

Hydrangeas of a beautiful blue may be produced, it is asserted, by giving the plants plenty of mold from fir leaves.

THE SCULPTOR'S FUNERAL.

Amm the aisle, apart, there stood
A mourner like the rest;
And while the solemn rites were said,
He fashioned into verse his mood,
That would not be repressed.

Why did they bring him home,
Bright jewel set in lead?
Oh, bear the sculptor back to Rome,
And lay him with the mighty dead,—
With Adonis, and the rest
Of all the young and good and fair,
That drew the milk of English breast,
And their last sigh in Latian air!

Lay him with Raphael, unto whom
Was granted Rome's most lasting tomb;
For many a luster, many an moon,
He might sleep well in the Pantheon,
Deep in the sacred city's womb,
The smoke and splendor and the stir of Rome.

Lay him 'neath Diocletian's dome,
Blessed Saint Mary of the Angels,
Near to that house in which he dwelt,—
House that to many seemed a home,
So much with him they loved and felt.
We were his guests a hundred times;
We loved him for his genial ways;
He gave me credit for my rhymes,
And made me blush with praise.

Ah! there be many histories
That no historian writes,
And friendship hath its mysteries
And consecrated nights;
Amid the busy days of pain,
Wear of hand, and tear of brain,
Weary midnight, weary morn,
Years of struggle paid with scorn:
Yet oft amid all this despair,
Long rambles in the Autumn days
O'er Appian or Flaminian Ways,
Bright moments snatched from care,
When loose as buffaloes on the wild Compagna
We roved and dined on crust and curds,
Olives, thin wine, and thinner birds,
And woke the echoes of divine Romagna;
And then returning late,
After long knocking at the Lateran gate,
Suppers and nights of gods; and then
Mornings that made us new-born men;
Rare nights at the Minerva tavern,
With Orvieto from the Cardinal's cavern;
Free nights, but fearless and without reproof,—
For Bayard's word ruled Beppo's roof.

O Rome! what memories awake,
When Crawford's name is said,
Of days and friends for whose dear sake
That path of Hades unto me
Will have no more of dread
Than his own Orpheus felt, seeking Eurydice!
O Crawford! husband, father, brother
Are in that name, that little word!
Let me no more my sorrow smother;
Grief stirs me, and I must be stirred.

O Death, thou teacher true and rough!
Full oft I fear that we have erred,
And have not loved enough;
But oh, ye friends, this side of Acheron,
Who cling to me to-day,
I shall not know my love till ye are gone
And I am gray!
Fair women with your loving eyes,
Old men that once my footsteps led,
Sweet children,—much as all I prize,
Until the sacred dust of death be shed
Upon each dear and venerable head,
I cannot love you as I love the dead!

But now, the natural man being sown,
We can more lucidly behold
The spiritual one;
For we, till time shall end,
Full visibly shall see our friend
In all his hand did mould,—
That worn and patient hand that lies so cold!

When on some blessed studious day
To my loved Library I wend my way,
Amid the forms that give the Gallery grace
His thought in that pale poet I shall trace,—
Keen Orpheus with his eyes
Fixed deep in ruddy hell,
Seeking amid those lurid skies
The wife he loved so well,—
And feel that still therein I see
All that was in my Master's thought,
And, in that constant hand wherewith he wrought,
The eternal type of constancy.
Thou marble husband! might there be
More of flesh and blood like thee!

Or if, in Music's festive hall,
I come to cheat me of my care,
Amid the swell, the dying fall,
His genius greets me there.
O man of bronze! thy solemn air—
Best soother of a troubled brain—
Floods me with memories, and again
As thou stand'st visibly to men,
Beloved musician! so once more
Crawford comes back that did thy form restore.

* * * * * * * * *

Well,—*requiescat!* let him pass!
Good mourners, go your several ways!
He needs no farther rite nor mass,
Nor eulogy, who best could praise
Himself in marble and in brass;
Yet his best monument did raise,
Not in those perishable things
That men eternal deem,—
The pride of palaces and kings,—
But in such works as must avail him there,
With him who, from the extreme
Love that was in his breast,
Said, "Come, all ye that heavy burdens bear,
And I will give you rest!" [Atlantic Monthly.

THE WANTS OF THE AGE.

(The following striking lines, which we find uncredited, are as applicable to California as to any part of the world, and perhaps more so, if we would take our stand to keep it.)

What wants the age? Heart-earnest men
To spread the truth, the truth defend;
Such on the earth we need again
As God in ancient times did send:
Men reckless or of wealth or fame,
Of ignominy, scorn, or shame,
The stake, the faggot, or the flame;
Their only object God: and truth their only aim.

What wants the age? Heaven-giving powers,
The seeds of discord to remove;
To make this dadal earth of ours
A scene of aye increasing love.
To banish hatred, strife and feud,
And Error's evil bringing brood;
To gain the pure, the true, the good,
To join our struggling race in one great brotherhood.

FROG LULLABY.

The frogs, with soul-inspiring songs,
Are making merry—all;
I have no doubt they sing to sleep
The tadpoles great and small,

And o'er I fancy, 'neath such strains
The happy pollywogs
Reflect and dream on what they'll do
When they are grown up frogs!

DUTIES OF DAILY LIFE.—Life is not entirely made up of great evils or heavy trials; but the perpetual recurrence of petty evils and small trials is the ordinary and appointed exercise of the Christian graces. To bear with the failings of those about us, with their infirmities, their bad judgment, their ill breeding, their perverse tempers; to endure neglect when we feel we deserved attention, and ingratitude when we expected thanks; to bear with the company of disagreeable people whom Providence has placed in our way, and whom He has provided on purpose for the trial of our virtue; these are the best exercise of patience and self-denial, and the better because not chosen by ourselves. To bear with vexation in business, with disappointment in our expectations, with interruptions of our retirement, with folly, intrusion, disturbance; in short, with whatever opposes our will, contradicts our humor; this habitual acquiescence appears to be more of the essence of self-denial than any little rigors or afflictions of our own imposing. These constant, inevitable, but inferior evils, properly improved, furnish a good moral discipline, and might, in the days of ignorance, have superseded pilgrimage and penance.—[Hannah More.

DIMENSIONS OF THE AMERICAN LAKES.—The latest measurements of these fresh water seas, are as follows: The greatest length of Lake Superior is 335 miles; the greatest breadth is 160 miles; mean depth, 988 feet; elevation, 627 feet; area, 23,000 square miles. The greatest length of Lake Michigan is 360 miles; its greatest breadth, 108 miles; mean depth, 900 feet; elevation, 686 feet; area. 23,000 square miles. The greatest length of Lake Huron is 200 miles; the greatest breadth is 160 miles; mean depth, 800 feet; elevation, 474 feet; area, 20,000 square miles. The greatest length of Lake Erie is 250 miles; its greatest breadth is 80 miles; its mean depth, 200 feet; elevation, 555 feet; area, 6,000 square miles. The greatest length of Lake Ontario is 180 miles, its greatest depth is 500 feet; elevation, 262 feet; area, 6,000 square miles. The total length of all five is 1,584 miles, covering an area altogether of upward of 90,000 square miles.

HAPPINESS OF WORKINGMEN.—The situation or social position of the poor—and by that word we mean the laboring population—is by no means so deficient in the means of happiness and comfort as many are led to believe. "The mechanics," says Lord Byron, "and working classes who can maintain their families, are, in my opinion, the happiest body of men. Poverty is wretchedness; but it is, perhaps, to be preferred to the heartless, unmeaning dissipation of the higher orders." A popular author says: "I have no propensity to envy any one, least of all, the rich and great; but if I were disposed to this weakness, the subject of my envy would be a healthy young man, in full possession of his health and faculties, going forth in the morning to work for his wife and children, or bringing them home his wages at night."—[Law Magazine.

To Teamsters and Others.

PATENT
ANTI-FRICTION
AXLE-GREASE.

THE season of internal communication with the Mining Districts having again opened, the subscribers take the opportunity of thanking their numerous customers for the extensive patronage given to their
PATENT AXLE-GREASE
during the last five years, and beg to say that no pains will be spared, in its future manufacture, to sustain its widely spread reputation as
The Best Lubricating Medium
for Coaches, Drays, &c., ever introduced into California.
HUCKS & LAMBERT,
Inventors and Sole Manufacturers,
NATOMA STREET, San Francisco.

NOTE. One application of Hucks & Lambert's Grease will enable the heaviest teams to perform the longest journey without requiring the axles to be re-greased on the road; and further, as the Patent Grease works free from coomb or gum the draft of the horse is very considerably lightened—a great desideratum in a long journey, or over a heavy road.

☞ To be had wholesale of S. PILLSBURY, Manufacturers' Agent, 37 and 39 Battery st., San Francisco. v9-15

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN
AND
NURSERY,

On the American River, 2½ miles from the Steamboat Levee,
SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of
GENUINE GARDEN VEGETABLE
SEEDS.
All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,
Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:
From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.
We call particular attention to our splendid stock of
CHERRY TREES,
THE FINEST AND LARGEST IN THE STATE,
embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being
CORRECT AS TO NAMES AND VARIETIES,
are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of
Shade and Ornamental Trees,
We have a very fine stock of all the leading varieties, some very fine extra large trees of the
ELMS, LABURNUMS AND LOCUST,
particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.
A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of
CAMELLIAS
is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,
Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

SINGER'S
SEWING MACHINE.
JOHN H. DUNNELL, Agent,
171 Washington street,....SAN FRANCISCO.

ALL who want a Sewing Machine for *service,* not show, a machine *easily learned, easily operated, never out of order,* which sews *any fabric, fine or coarse—muslin, cloth,* or *leather;* making a stich *alike* on *both sides,* and using *cotton, linen,* and *silk thread,* will do well to look at our machine. It will do all we claim for it.
We have testimonials from all parts of the country, and from parties who have used other well-known machines, and discarded them for ours.
Our **Family Machine** is the most elegant one in use.
Circulars will be sent on application.
Our Machine is in more extensive use, for general manufacturing, than any other. v9-11 3m

Vance's Branch.—New Gallery.
AMBROTYPES, PHOTOGRAPHS,
Daguerreotypes and Melainotypes.
VANCE & CO.,
Corner of Third and J streets,
(Hiller & Andrews' Building) SACRAMENTO,
HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons
The Genuine Patent Ambrotypes,
which, since their introduction at our establishment in San Francisco have gained such popularity.
We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.
We shall also take, as usual, our **Premium Daguerreotypes** and **Photographs,** as heretofore, in a manner
UNSURPASSED ANYWHERE.
Having three operators—one for each branch of the Art—With Mr. L. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee
PERFECT LIKENESSES
to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.
☞ We invite all to *Call and See our Rooms and Specimens,* whether in want of pictures or not. VANCE & CO.,
9-3m Sacramento.

The California Farmer.

SAN FRANCISCO, FRIDAY, APRIL 30, 1858.

Where does the Gold Go?

In order that some estimate may be formed of the *value* of our domestic produce, we will give the quantities of several articles *imported*, and then ask the friends of "home industry" how long it will take a State to grow rich, or their people to become prosperous, when such a vast sum is annually sent out of the State to purchase articles that we should produce ourselves. We are satisfied that the merchant that does not *now fortify* himself against all contingencies of trade, will have cause of regret when he sees the sad consequences resulting from excessive importations of those articles which can be raised or manufactured here.

Suppose we should give a schedule of *some* of those articles that have been sent from the East since last November, and have arrived or are to arrive, and for which large sums will go for freight money, to say nothing of the immense cost of them which must go abroad in the shape of gold, thus taking the very bread from the producing classes:

1. Dried Apples, 781 bbls., 240 hf do, 3500 pkgs.
2. Bacon, 430 hhds., 10 tierces, 62 bbls.
3. Boots and Shoes, 15180 pkgs.
4. Butter, 104 hhds, 3134 firks, 480 cs, 251 pkgs.
5. Candles, 20,500 boxes, 2300 hf boxes.
6. Corn Meal, 1800 pkgs.
7. Cordage, 5750 coils, 72 sacks.
8. Hams, 301 hhds., 5 cases, 201 tierces.
9. Hops, 150 bales.
10. Lard, 540 pkgs, 7000 cs, 1500 kegs and casks.
11. Water Pails, 3650 dozen.
12. Paints, 266 pkgs, 416 cases and pkgs.
13. Pickles, 7000 pkgs.
14. Soap, 20,000 qr bxs, 5000 hf do, 8500 boxes.
15. Starch, 1375 qr bxs, 1350 hf do, 4500 boxes.
16. Wines, 2000 cases and packages.

We will only take sixteen articles from the many that could be named, and the amount is almost incredible. Not one that we have named but could be raised or manufactured here, and profitably, too. These things are worthy the consideration of all who wish the prosperity of our State. It is impossible that we can be a prosperous State so long as we are drained of our wealth to support other States. We must produce more, manufacture more, and thus retain the wealth which belongs to us.

We ask our readers to read over the list we have presented, and of articles which all can see can easily be produced here, and then ask themselves what can be done to remedy the evil under which we now suffer; and then to unite upon some plan to guard, sustain and build up home manufactures.

Importation of Flour.

That the public may form some idea of the correctness of those Commission Houses who profess to be so well posted, and yet who all along said the importations would be small, we give the amounts we have received from our various channels of information, and they figure up *only twenty-three thousand five hundred and twenty-eight* barrels of flour direct from the Atlantic side; and when we add the recent arrivals from the ports of Guaymas, the Islands, and from Oregon, it will increase it to the value in flour, of *thirty thousand barrels*. And may we not expect flour and grain from Chile? most assuredly; and every day reveals features in the Flour market, that show the public have been most grossly imposed upon.

Those merchants that have suffered by the frauds that have been practiced, should not easily forget these things; and those farmers that have suffered, have no one to blame but themselves. We have warned them in due time. Where are the farmers that held Barley over? What do they now think of their friends that counseled them to hold on for 2c; would they not have been much better off to have sold for 1½ or 1¾ cents?

Farmers have no right to become *speculators* when they are in debt, or their farms need repairs or improving. Let farmers attend to their own *legitimate business:* plow, plant, harvest and sell, then pay off; add comforts to the home and homestead, then improve and beautify, and enjoy the luxury of being out of debt and out of the anxiety of speculators. Farmers will see the *error* of this late speculation, when the *new harvest* comes in; the importation of Flour and Grain will have taken more than a *quarter of a million of dollars* from us to pay for it, and the freight, and every result like this falls heaviest on the producing classes.

Prospect of the Harvest.

Good news comes to us from all quarters. There is every assurance of one of the greatest grain crops ever yet harvested in California.

A friend from Bodega gives us his own judgment, founded upon an examination of that section of country from Bodega down to San Francisco, through the great valleys of Sonoma, Santa Rosa, Petaluma, and Napa; there the crops of all grains will be enormous.

Our own information, direct from the great Pajaro valley, along the Salinas plains, from Monterey and Santa Clara counties, from Alameda, along the entire San Pablo, shows that unbounded prosperity rests upon the grain crops.

The present week, in all the Yolo country, the farmers see a great harvest before them, and, as we passed up the Sacramento and Feather rivers, we have never seen the grain stand better—a rich dark green upon the blade; heavy heads, already in the milk, and in some places now making its last change. All that we see, all that we hear, assures us that we shall not only have one of the greatest grain crops, but it will come in *earlier* than usual. With such prospects before us, can we not say to all, there is no need to *"fear a famine,"* nor to fear the "flour speculators." The price will speedily come down, and those who, in face of the present crop in California, shall send us more flour from abroad, deserve to *make a loss.*

New Banks.

The present Legislature have adjourned with clean hands, upon the subject of Banks and Banking. It is well known that a horde of hungry cormorants have been watching for *chances* to spring some plan by which "rag money" could be introduced into the State, but thanks to a kind Providence, which watches nations and governments, there were another set so much nearer starving, that "stood like the long, lank, hungry-looking swine at the trough" that must be first fed, that there has not been time to open another *grain-chest*, and so they must go hungry till another season. But danger has not all passed away, it lurks in our community like the winged seed of the pestilence, and waits only the first spot of contagion to spread; and although there may be a *quarantine* known as the *law of the land*, yet for the sake of securing the profitable sale of a contraband cargo at an enormous profit, law, both human and divine, will be set at defiance, and our community will find the disease appear in our midst like the plague spots of Egypt.

That there is a system of traffic carried on in our midst called Banking, that has no kindred with it but in name, none can doubt. Gold dust bought, highest price paid for dust, checks at par, money loaned on personal security, etc., etc., and a thousand other plans by which men are defrauded, is proved by the oft-registered record of crime in our courts, and these are under the names of Banks and Banking. But at the present moment we hear of mammoth plans, by which combinations of men are to concentrate their forces and bring to bear schemes laid in the closet in secret, and with a fair outside, the needy and the unwary are to be brought like the fly into the meshes of the spider, that those who suck the heart's blood of men, and those who take the "pound of flesh" nearest the heart, may fatten upon those who must yield up life to their demands.

We may speak in riddles now, but these will soon be solved; yet we raise our voice to those who have ears to hear, and ask them if they ever heard that interesting little song, "The spider and the fly." A word of warning in season may place the unwary on their guard; those who are ignorant should watch. The signs of the times are pregnant with great events.

The Atheneum.

"Honest confession is good for the soul."

That we were deceived by the proprietor (G. W. Weekes) of the paper bearing that name, we are free to admit; that we were disappointed in our estimate of the character, ability and position of the editress, also, we confess; but, in both cases, it causeth us more sorrow than anger.

We regret that any one, or any party, and, especially, a woman, should assume the character of an editor or editress, and have no higher motive than that of *winning the almighty dollar;* and, although from the facts disclosed, we are ready to admit they have been pursuing a long continued course of deception and fraud upon the people, yet we would rather cling to the belief that the woman had been made the instrument of the wrong, by means of threats and terror, than that it was done by her own free will; for there seems so great an inconsistency between the *apparent* love of literary pursuits connected with such a journal, and the scheming trickery necessary to carry on this long continued fraud. With this belief, we do think that the great main planner is, and the chief villainy should be charged to, G. W. Weekes alone, and we sincerely trust he will be brought to a speedy punishment. The woman must feel she is bitterly punished to be connected with such a wretch. Of one thing, all will agree with us: he was a shrewd villain; for he made use of the most powerful instrument in the world to advance his cause—the form, influence, and tongue of woman—and though his intent was to cheat and deceive the public, and they were cheated and imposed upon, yet, alas, the woman was the greatest sufferer, and she was deceived in the most cruel manner, and this marks the man as a villain of the deepest dye.

As a journalist we have not entered into the various discussions and criticisms of the day, and do not intend to do so, but, in this instance, our sympathies were enlisted, from the fact of the apparent bitter persecution to a stranger, and thus we were "sold." In the discussion, thus far, "not a drop" of "angry blood" has moved in our veins, and, although we have been made quite a mark for our gallantry in defending a woman, we don't stand alone; there's lots of people that stand in parcels of 5s and 3s, while we fight our battle single handed, and as we had spoken in favor of the Atheneum, believing it *was* worthy, so now we are called upon to say what we have said; and if we erred in that, we will make all the atonement in our power:

"For when a smiling face doth cloak deceit,
It is our duty to expose the cheat."

And, in closing our remarks, we mean what we say above—if we have erred, we will make atonement; and we say, publicly, if, in the *recommendation* we gave, in our journal, of the Atheneum, any person or persons were induced *by that recommendation alone* to subscribe and *pay* for that paper, we will send them the Farmer, until they are made whole. More could not be asked of us; more we cannot do. We repeat our convictions: the woman deserves pity for her condition and circumstances, while the man deserves the scourge and the pillory.

☞ Willard's Seed-sower and Harrower will, on the invitation of the Farmers in Napa Valley, be again tested, on Tuesday next, May 3d, on the farm of N. Simons, Brown's Valley, two miles from steamboat landing. All interested are invited to be present. The *labor-saving* properties of this valuable implement will be thoroughly tested on several kinds of soil, which are being prepared expressly for the trial.

New Magazines.

There seems to be a mania for new publications just now, and we are glad of it; if they do not all live and thrive, the effort will call into being, most undoubtedly, some dormant thoughts and energies that would not otherwise have been called into action; and thus, though all may not be prosperous, the community will be the gainer.

Our newspaper friend, J. H. Still, Esq., will issue his new magazine on the first of June, and from his well known energy and perseverance, we may expect a good periodical.

The Culturist is also announced to appear on the first of June, and we gladly welcome to the field a co-worker in the cause of beautifying home. This work is to be issued monthly, and it is promised to be a good work with colored engravings. As this must be a work of great cost, it is to be hoped that the colored engravings will be of a superior character, and in keeping with the progress of the age. The work is to be under the editorial charge of the Rev. O. C. Wheeler and Mr. Wadsworth. Mr. Wheeler was formerly editor of the Pacific, a religious paper of excellent merit while published; Mr. Wadsworth was the editor of the Placerville American, and while he conducted that paper it was one of the best appearing papers among all our interior exchanges. We sincerely hope the Culturist will meet with success, as it will be a work of interest and value, and we believe every exertion will be made to make it worthy the field it occupies.

The Hesperian is to be the name of a new magazine of literature, which will commence its career on the opening month of May. This journal will be under the editorial control of Mrs. Shultz and Mrs. Day, the former is most happily known as "Portia" in many of our best journals, and the latter has won enviable fame as "Carrie D." These ladies both possess means, character and ability to make the Hesperion an honor to literature.

State Society's Premiums for 1858.

We present our readers this week, with the Premium List of the State Agricultural Society. We ask a careful consideration to this List, by all who feel an interest in the permanent welfare of California. There are so many and important interests connected therewith, that we feel that we have a guarantee of the success of the Fair. From the energy and careful interest manifested by the Executive Committee, and by the feeling of the citizens of Marysville for the success of the Fair, we know no effort will be spared to give success to it.

To Our Readers and Correspondents. Our table, this day, as we look upon it, appears like a beautiful blue sky studded with stars; and what is more, we can enjoy the sight of the sun and moon at the same time. The steamer brought us a freight of contributions that appear like gems to us; they came from correspondents good and true.

We can announce one from the ever welcome Grace Greenwood, whose gifted pen is ever sending from the fountain of pure thought its living truths, like the gushing waters from the artesian. Her letter in this number will be read with delight.

We have another gem from Mrs. E. W. Farnham, for our next issue. This noble advocate of woman sends forth her thoughts like electric flashes, to purify the atmosphere, so that we may live longer.

The valuable letters from New York, of our highly esteemed correspondent B., demand a careful reading by all. One appears this week. The next steamer will bring us more.

"A voice from the steerage" of the John L. Stephens, dated Acapulco, prepared by a friend, for our journal, will appear next week.

"Old Maids," or a letter to Sallie upon this subject, by our ever kind correspondent Alice. This is a rich, sprightly, and rather satirical letter; it will wound, and it will heal. We have it on file.

"Home—The Voices of Home," by our esteemed correspondent N. B. H., at Oak Shade, is received; it is a noble letter, and will appear next week.

"The beautifying effect of labor among women," from the pen of Mary Glen, is most happily received, and will appear.

The "Flour Monopoly," by Mary Glen. Where are the speculators now. They had better settle up the *profit and loss account* before Mary speaks. Trouble is brewing.

"Rhymes for the Times," No. 2, Progress, by Agricola, a noble song, will appear next week. Few writers of the present day can offer such a varied fund of useful, entertaining, and valuable thoughts as our honored correspondent Agricola. We have a letter from him, making corrections in the printed Reports of the State Society, relative to his Essays; it will appear next week.

"Soul Life," by Soltero, next week. Soltero is always acceptable. If he will give a few hours daily to study, he will win honor.

"April Song in California," received and on file.

Lines, by Mary, received and on file.

"The Wrong House," by the author of the "Slug and the Picayune," received and on file.

International Hotel.—It is an indisputable fact, that this fine hotel is winning golden opinions from all quarters. The register marks its thirty, forty and fifty guests per day, and all comers praise the hostess, the host, and their courteous aids, for fine clean rooms, splendid table and plenty of good things.

Figel & Brother.—A good suit of clothes, a neat setting coat and pants, a pure white vest (or a blue one and bright buttons), is now *the* fashion, and for the cravat and neck-tie, with all the other choice things—Figel & Brother can do it up to a charm. They can please a prince, and customers are most graciously waited on by a "King."

State Agricultural Society's PREMIUM LIST

..AND..

RULES FOR THE

ANNUAL FAIR

..AT..

MARYSVILLE,

August 23d, 24th, 25th, 25th, 27th and 28th, 1858.

I. Farms, Orchards, and Vineyards.

Competitors in this department must, in order to insure the attention of the Visiting Committee, give notice of their intention, and make the proper entry, at the Office of the Society, before the first of June. This being done, the Committee will spare no pains to make the *first* of their examination accord with the wishes of those competing.

Grain Farms will be arranged in three classes, according to the number of acres each may contain. Circulars, containing full particulars pertaining to entry will be forwarded to all applicants for the same.

Address O. C. WHEELER, Corresponding Secretary, State Agricultural Society, corner of Sixth and J streets, Sacramento.

Discretionary Premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of Premiums.

Each Committee is authorized to *recommend*, but not to award, Special Premiums upon objects which properly belong to the class assigned to it.

The Judges appointed will, in every instance, *withhold Premiums on animals or articles that, in their opinion, are not worthy, though there be no competition;* and no stock of inferior quality will be admitted within the ground.

The Managers of the Society will be present during the Fair, to give all general directions, and forage will be furnished gratis for animals entered for premiums.

Abbreviations used in this Schedule.—GM, Gold Medal; SM, Silver Medal; FD, Framed Diploma; D, Diploma; Pl, Plate; B, Book.

XV.

CATTLE SHOW.

The Cattle Show will be held in the City of Marysville, very near the Fair Grounds.

Competitors are required to forward to the Office a list of the animals intended to be exhibited, on or before the 10th day of August, in order that proper stalls may be provided.

Stock must be on the ground before 10 A.M. of August 23d, when proper places will be assigned them; and no animal will be permitted to leave the stall between 10 A.M. and 4 P.M. on any day of exhibition. A want of compliance with any part of this rule, will forfeit all claim to a premium.

The Regulations to be made by the Judges.

The Executive Committee have availed themselves of the experience of their predecessors, and of the best information within their reach, and yet the foregoing Schedule is, perhaps, imperfect. It has been found impracticable to maintain what many will regard as a just *proportion* in the arrangement of the Premiums. In explanation of what otherwise might seem an absurdity, it should be understood that there are to be three sizes of Medals—both of the Gold and of the Silver. The Gold Medals will be rated at $50, $30 and $20: the Silver at $15, $10 and $5.

Suggestions from persons of experience, especially in the department of *Mining*, will be thankfully received, and may still be adopted.

RULES,

For the Government of the California State Agricultural Society's Annual Fair at Marysville, 1858.

RULE I.—Each member of the California State Agricultural Society will be furnished with a badge of membership, upon payment of the membership fee of ten dollars, and will be expected to wear the same during the Fair, and which shall not be transferable. This badge will admit the ladies of his family, and children under fifteen years of age.

RULE II.—Price of single admission, to the Fair or Cattle Show, fifty cents. Single admission to both, one dollar. Season tickets, admitting a gentleman and lady to all the exercises at the Hall, and at the Show Ground, five dollars. Season tickets, admitting one person, as above, three dollars. Clergymen, editors, and delegates from Agricultural Societies, will be presented with a complimentary card of admission, on application at the Secretary's office.

RULE III.—Any person desiring to send articles or animals for exhibition at the State Fair, on producing a certificate of membership of the State Agricultural Society, for the present year, will receive a free pass for said articles or animals on any steamer belonging to the California Steam Navigation Company. Any such pass, having been countersigned by the President or Secretary of the Society, will entitle the bearer to return the articles or animals, enumerated therein, on the boats of the Steam Navigation Company, free of charge.

RULE IV.—All exhibitors, who intend to compete for the premiums of the Society, should become members of the same, and have their articles entered at the office in Marysville, at or before 10 o'clock A.M. on Monday, August 23d, without fail, so that they may be arranged in their respective departments, and in readiness for examination, by the Judges, on Tuesday, at 10 A.M.

RULE V.—The Society will not be responsible for the omission to exhibit any article or animal not entered strictly in accordance with its rules.

RULE VI.—No article or animal, entered for a premium, can be removed or taken away, without special permission, before the close of the exhibition. No premium will be paid on articles or animals removed in violation of this rule.

RULE VII.—All articles and animals, entered for exhibition, must have cards attached, with the number, as entered at the Secretary's desk; and exhibitors, in all cases, must obtain their cards previous to placing their articles or animals on the Fair grounds.

RULE VIII.—Those who wish to offer animals or articles for sale, during the Fair, must notify the Secretary of such intention at the time of entering.

RULE IX.—The Executive Committee will use every precaution in their power for the safe preservation of all articles and stock on exhibition. Exhibitors must give their attention to their articles or animals during the Fair, and at the close of the exhibition attend to their removal.

RULE X.—Judges will be selected with reference solely to the highest order of fitness, provided always that no person will be permitted to act as Judge in a department where he is a competitor.

RULE XI.—In no case can the Judges award special or discretionary premiums, but will recommend to the Executive Committee any articles in their class which they may deem worthy of special notice, and for which a premium has not been offered.

RULE XII.—The Judges on Animals will have regard to the symmetry, early maturing, thorough breeding, and characteristics of the breeds which they judge. They will make proper allowances for the age, feeding and condition of the animals, especially in the breeding classes, and will not give encouragement to over-fed animals.

RULE XIII.—No stock of inferior quality will be admitted within the grounds. A committee will be appointed to rule out all below a medium grade.

RULE XIV.—Animals, to which premiums have been awarded, must be paraded around the track, under the direction of the Marshal, that visitors may see the prize animals.

RULE XV.—No person will be allowed to interfere with the Judges during their adjudications.

RULE XVI.—The several Superintending Committees will give particular direction to all articles in their department, and see that all are arranged in the best order possible, to lessen and facilitate the labors of the Judges in their examinations.

RULE XVII.—The Superintendents will attend each set of Judges, in their respective departments, and point out the different articles or animals to be examined; will attach prize cards to the articles, or flags to the successful animals, after the reports of the Judges have been made up and delivered to the Chairman of the Executive Committee.

RULE XVIII.—The Judges will withhold premiums on animals or articles which, in their opinion, are not worthy.

RULE XIX.—The Chief Marshal, with efficient aids, will be in attendance during the hours of exhibition, to keep proper order.

RULE XX.—Animals, when duly entered, will be well provided for by the Society, without charge to the owner, and cannot be removed except by permission of the Executive Committee.

RULE XXI.—All machines, implements, or other products of mechanical art, must be exhibited by their respective makers, or inventors, or improvers, or their assignees, to or for whom only premiums of such articles will be awarded.

RULE XXII.—Every machine or implement offered for a premium must be so designated or described as to identify it to future purchasers, and also the selling price of the article must be stated and marked on the labels and in the published report of premium articles.

RULE XXIII.—Efficiency, cheapness and durability will be regarded as chief excellencies in every machine or implement.

RULE XXIV.—All articles under the head of Mining Implements must be accompanied by a full description of the same; and all specimens under the head of Minerals, or Mineral Products, must be accompanied by a statement showing where and when procured, together with such other information as will tend to aid the Judges in making judicious awards.

RULE XXV.—The Chief Marshal will call the Judges at 10 o'clock on Tuesday morning, assemble them at the Secretary's rooms, furnish them with blank books, in which to register their awards, and have the Judges conducted, by the Assistant Marshals, to their respective departments of the Exhibition.

RULE XXVI.—The Marshal and his Aids will give daily and constant attention to the several departments, and see that each of the above rules is strictly enforced.

RULE XXVII.—All *regular* premiums will be announced and delivered to their respective claimants, with appropriate exercises, before the close of the Fair.

RULE XXVIII.—A suitable person will be chosen in each department to superintend the carrying out of the arrangements of the Executive Committee.

RULE XXIX.—Parties to whom premiums in money have been awarded, shall have the choice to receive the same in money, silver plate, or diplomas.

SPECIAL NOTICES.

☞ **HOUSEKEEPER WANTED.**—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.

The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.

A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings two numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing; a Vineyard loaded with promised fruit; a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).

Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.

All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14tf

☞ **Wigs! Wigs!! Wigs!!!** — BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.
v8-13 1y 233 Broadway, New York.

☞ **A. W. FABER'S LEAD PENCILS**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct, 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not ailed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York."
E. FABER, Sole Agent
v9-1 6m 133 William street, New York.

THE HAIR! THE HAIR!!

WHAT Lady or Gentleman would be deprived of a beautiful head of Hair, when by the use of LYON'S KATHAIRON such an one can so easily be had? Too much value cannot be placed on a fine head of Hair—not only as an adornment to the person—and no person is well dressed without well-arranged Hair—but, also, as intimately connected with the general health of the body—for this connection is much closer than is generally supposed. The KATHAIRON preserves and beautifies the Hair, making it soft, curly, and glossy; and by its cleansing and invigorating properties, gives tone and elasticity to the whole system. Sold everywhere for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
15 1m *San Francisco, California.*

☞ **Wistar's Balsam of Wild Cherry.**—The following letter from Rev. Henry Wood, of Concord, N. H., editor of the Congregational Journal, speaks volumes in favor of WISTAR'S BALSAM:

CONCORD, N. H., March 2.

Messrs. Seth W. Fowle & Co.—Gentlemen: Two years ago, a sudden and violent attack upon my Lungs confined me to my bed for several weeks, and, when I recovered, I was so much oppressed by difficulty in breathing, that I was often unable to sleep or rest upon a bed by night. The suffering was extreme, and, judging from the inefficacy of the remedies used, I supposed the disease incurable. Being persuaded to try a bottle of WISTAR'S BALSAM OF WILD CHERRY, without confidence in its efficacy, I found the difficulty almost entirely removed before one bottle was used up. Sympathy with my fellow-sufferers induces me to make this public statement, and recommend the article to others similarly afflicted.

With respect, yours truly, HENRY WOOD.

None genuine unless signed I. BUTTS on the wrapper.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 15-1m

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**
Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of
WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

☞ **Farm Stock.**—Having completed our arrangements for the importation of choice stock, we are now prepared to receive orders for any of the following breeds, and would call the attention of those in want, to our unsurpassed facilities for the importation and improvement of the choicest stock:

		Webb Southdown Sheep.	
Thorough-bred Devon Cattle,		French Merino	do
Shorthorns	do	Spanish	do do
Thorough-bred Ayrshire	do	Cotswold	do do
Suffolk and Essex Pigs.		Chester White Hogs.	

Fancy Fowls—all the best varieties.

All communications addressed to us will receive immediate attention, and we shall be happy to correspond with any and all upon the subject. Address
2 WARREN & CO., Cal. Farmer Office.

☞ **REGISTRY OF STOCK.**—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.

HOTEL
INTERNATIONAL.
San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public, and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present
Lessee and Managers,
A. S. HALEY,
JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most
DESIRABLE STOPPING-PLACE
For Families or Single Gentlemen,
during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, LESSEE.
ASSISTED BY: JOHN J. HALEY, and
E. R. ROBINSON, formerly of the New York Hotel.

A Rare Chance for Farming!!

SHERIFF'S SALE, TO FORECLOSE A MORTGAGE.

A RANCH

in Contra Costa county, near "Marsh's Landing" on the San Joaquin River,
WILL BE SOLD,
On SATURDAY, May 8th, at 12 o'clock, M.,—at Court-House Door, Martinez,

Formerly known as
"FULLER'S RANCH,"

situated on the banks of said river; six feet above the highest rise of water; contains about 350 acres, nearly all cultivated, and splendid Crops of Wheat, Barley, Rye, Indian-corn and Broom-corn, Vegetables, Fruit Trees (over 1000) of every variety, with many varieties of Grapes—nearly all in bearing condition. The whole Farm inclosed with a good picket-fence. Together with Dwelling-house, Farm-house, Store, Blacksmith-shop, Barns, Stables, Corrals, and other buildings.

Said Ranch has been under cultivation for the last five years, and is well calculated for raising early vegetables for market; including both wet and dry land; many parts of the upland heavily timbered; the dry land very warm and early; about 50 acres meadow, a part of which is under cultivation, and can be all irrigated or overflown by hoisting a gate, and drained by closing.

The location is altogether one of the pleasantest, healthiest, and most desirable situations in the country, either for Farming or Stock Raising, being well watered and a large range of unoccupied land adjoining it.

Titles perfectly satisfactory.

Address, or inquire at Office California Farmer.

[Sac. Union, and Stockton Republican, please copy, and send bill to this office.]

SPLENDID BLOOD STOCK.

A RARE OPPORTUNITY
FOR
PURCHASERS OF FINE STOCK.

The undersigned, having determined to return to the Atlantic States, at an early day, proposes to offer at
PUBLIC AUCTION,
the entire lot of
FULL BLOOD STOCK,
which he has imported from the East, within the past two years, together with their progeny.

This collection was selected by himself, personally, from the very best stock-raisers in the Eastern States, and he is prepared to show the pedigrees of all the animals, so as to secure to purchasers the satisfaction of having pure stock.

This collection consists of fourteen head, as follows:

The noble Bull Calf, "SNOW BALL," by imported Bull "Bob Letcher."

"KENTUCKY BELLE," the finest heifer that could be purchased in Kentucky, and which is admitted to be unsurpassed. Sire, imported bull, "Prince Albert."

"LADY JANE," 3 year old heifer, bred and raised upon the farm of the Hon. Henry Clay. "Lady Jane" has a BULL CALF by her side, of rare promise.

☞ In addition to these I shall offer:

One two-year old BULL, two YEARLINGS, and COWS, COWS with CALVES, and other YOUNG STOCK.

This entire lot of animals was selected by the undersigned for the express purpose of improving the Stock of the State, and was driven over the Plains with care. It was the best Stock that could be procured in Kentucky. Full pedigrees will be furnished at the sale to all purchasers.

Every information needed, relative to the Stock, will be cheerfully given by the undersigned, where the Stock can be seen.

The sale will take place at the
Horse Market, Sacramento,
On the 15th of MAY, at 10 o'clock, A. M.

S. W. LONG,
PUTO CREEK, Solano county.

P. S. Information of the Stock, its character, value, and reference, can be had at the CAL. FARMER office.
15 1m

Austin's Patent Wooden Fan
WINDMILL.

THE undersigned has secured his PATENT for the
NEW WINDMILL
invented by him recently, and which by every test yet made, has proved to be most completely successful.

This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.

This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.

THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.

Any person of common ability can put them up, as directions for so doing go with them.

JESSIE A. AUSTIN,
PATENTEE,
STOCKTON, Cal.

N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. (14) J. A. A.

Who Wants a Cheap Piano?

THE subscriber has for years been engaged in the purchase and sale of PIANOS, HARPS, MELODEONS, GUITARS, ORGANS, MUSIC, &c., and, being a *practical musician*, has given entire satisfaction. He buys *directly from the manufacturers*, and is thereby relieved from heavy rents and other expenses. Every instrument sold by him receives his personal attention, is *guaranteed* not only as to *quality*, but as being *cheaper* than it can be procured at any wholesale house in America. A printed list of prices, accompanied by the most unquestionable references, will be sent free to all parts of the world, on application to JAMES M. EDNEY,
56 John street, New York City.
*** Circulars to be had, and orders received at the FARMER Office, San Francisco. v7-22 1y cop

Rags Wanted.

THE HIGHEST PRICE PAID IN CASH for Paper Rags at the Office of the Pioneer Paper-mill, No 25 California street. Our friends in the country are invited to send in their Rags, and send them to us. Printers, publishers, book-binders, etc., can be supplied with extra sized Paper, at short notice.
9-16 3m TAYLOR & POST.

STOCKTON FEMALE SEMINARY.

THE First Session of this Institution will commence on Monday, March 1, 1858, and continue five months, under the charge of Dr. C. Collins and Lady, assisted by competent instructors.

FEMALE INSTITUTE.

THE Female Institute in Santa Clara, under the management of James Rogers, A. M., still enjoys a good degree of prosperity. The Board of Instruction is ample, and the Terms of Tuition as liberal as in any school of equal grade in the State.

☞ **THORBURN'S Preliminary Wholesale** CATALOGUE OF VEGETABLE SEEDS, *of the present year's growth*, will be published on the 20TH JULY, and will be mailed to Dealers and others requiring Seeds in quantities, inclosing stamps for return postage.

LOVE'S MEMORY.

BY FINLEY JOHNSON.

I watched the sunbeams as they broke
  Upon thy natal day,
And dropped a tear to think that thou
  Wert absent far away!
And as fond memory called to light
  The happy days gone by,
There rose unto my heaving breast
  A sad, unpitied sigh;
And as I saw the sunbeams play
  Where we had often met,
My soul was filled with pain to think
  Thou shouldst so soon forget.

I fondly hoped those tender ties
  Would never have been broken,
But like the "Dead Sea" fruit they leave
  But ashes as their token;
Like summer flowers they all have fled,
  To never more return,
And memory can but drop a tear
  Above their sacred urn;
But still those early vows we made
  To me shall sacred be,
And though we meet on earth no more
  My heart shall cling to thee. [Loulsv. Jour.

Letter from Grace Greenwood.

PHILADELPHIA, March 19, 1858.

EDITORS FARMER: Since my last dish of musical gossip, we have had our superb Academy of Music really dedicated to the divine art, for the cultivation of which, its name would imply, it had been erected. Beethoven and Mozart have lifted up their immortal voices, and filled and shaken and consecrated its magnificent dome.

I shall never lose the impression that Beethoven's *Fidelio* produced on me. I had worked hard during the day, and really felt unequal to sitting through an opera which I had been told was undramatic and somewhat tedious; but—I went. I had been told truly, in part; It was heavy in plot, meager in incident, and deficient in dramatic interest. But the majesty, scope, and sweep of the music! I seemed to have been subjected to one of those mysterious, subtle spiritual agencies by which one is resolved into the essence of one's self—becoming all soul and brain, and rendered oblivious to fleshly and muscular instincts and attributes. My first impression was of space and ineffable calm, upon which gradually dawned, as it were, a lofty, yet serene and tender spirit, and through which now floated and sung, jubilant and radiant, those infinitely sweet accords; now wailed, and sobbed, and shuddered, those strange, weird, solemn evocations from the very soul of sound, while above all and in all, permeating and informing it, I felt the soul of the composer; it was almost a visible, tangible presence—grand, majestic, benign, harmonious. I came home with "my heart among the stars."

More recently, we have had the New York opera troupe with us, achieving a brilliant and continuous success, and treating us to grand operas, in a grand and worthy style. This is the largest and finest troupe that has been organized in America for some years, containing a number of really great artists. Chief among these is Carl Formes, probably the first basso of the world, now that Lablache is "dead again." He is a great artist in the supremest sense, possessing imagination, feeling, sentiment, taste, and intellect. These, conjoined with an organ of titanic volume, compass and depth, and the highest culture, make him a worthy successor to Lablache. His greatest performances here were in the characters of Leporello, in *Don Giovanni*, and Bertram, in *Robert le Diable*. The first of these is called his best *role*, but to my mind, or rather *taste*, he takes too much buffo license, running the fun of the character into vulgarity and coarseness, now and then. But in the last scene, in that awfullest and grandest passage in all music, when the motley drops, and his blanched soul stands in naked relief against the black, dreadful horror of the moment, he was surpassingly great.

As a whole, a character, I admired his Bertram most, though this also was, in my judgment, removed from perfection by the fact that the artist's own nature was wanting in certain qualities, which honored his humanity by their absence. The character is a Mephistopheles, and it seemed to me, that in the two scenes disclosing him alone, once in a solitary glen, and again in a ruined abbey, at night, he did not "fill the stage;" there was not that silent projection of the spirit, that magnetic exhalation, that *insensible perspiration* (if I may use the expression) of character which informs and electrifies the atmosphere and makes you feel and understand it through more subtle and mysterious avenues than the senses, or the intellect. With this exception, I think Herr Formes' Bertram almost the finest thing I ever saw on the lyric stage.

We are now having the Maretzek troupe again, which, limited in numbers and circumscribed in talent as it is, could hardly in the nature of things, expect to do other than it is, just escaping a failure. Mr. Ullman's troupe has too recently taught us that we can appreciate the very best operas, given in the very best style; we cannot tamely go back to the *Traviata* and *Trovatore* barbarisms of last year.

With the exception of the opera, we have had a very quiet winter. The hard times have depressed all classes. Our amusements have not been very attractive; lectures have been fewer, and, as a general thing, less numerously attended than formerly. Mr. Chapin has been here once, Henry Ward Beecher twice, and Emerson once. The first I was not able to hear, but was more fortunate in regard to the Boanerges of Brooklyn and the sage of Concord. The subject of Mr. Beecher's last lecture was "mirthfulness." In it he seemed to define and defend his position. It was a justification not only of mirthfulness in general, but of that particular mirthfulness of the Beechers, which follows them into the pulpit, and is perpetually liable to break out in the gravest discourse. It was no piece of special pleading in defence of "the sin which doth so easily beset" the speaker; but a manly and withal *christian* declaration of his right to use every mental faculty which God had given him.

But humor is its own justification and reward; to control or crush it were a crime against nature, in her happiest and most beneficent manifestations. Nothing can be sadder to see than a martyrized mirthfulness, dying by slow, religious tortures. Mr. Beecher does not look as though he had suffered by any such process; but as though he had let this, with all other natural, and so heaven-indorsed faculties, "have free course and be glorified." His face is kept fresh and full by the matchless preservative power of boyish fun and playfulness; his voice, even in its most ministerial tones, has the echo of a hearty laugh in it. He makes the dryest metaphysical question juicy with a quaint humor, and the most grand and somber subject with which he overarches the minds of his hearers, is edged by the heat-lightnings of wit and playful fancy. In spite of his orthodoxy, the awful doctrines of Calvin seem to have for him, if not intrusive absurdities, their fun-provoking points and incongruous aspects. "Predestination, original sin," and such-like solemn theological riddles, which orthodoxy propounds, devouring Sphinx-like, all whom they stagger and confound, have, I am sure, their ludicrous side to him. Were it not so, they were enough to madden the most genial of theologians. The Law on his lips, has borrowed the persuasiveness of love, and counsels rather than threatens; the thunders of Sinai have cleared away, and left its summit bathed in sunlight, and its rocky old sides laugh with the promise of a better faith and a "new law." Christ is exalted upon it, until it becomes as the Mount of Transfiguration.

As a speaker, Mr. Beecher has great power, of the most dramatic, startling and entrancing character. His voice is powerful, but rather too clerical in its tones; and there is a prim disposition of his long, sleek locks, more parsonian than picturesque. He is full of action, usually forcible and natural. He treads the platform as M'Gregor trod his native heath, or as Kemble trod the boards—full of exultation and conscious supremacy. He is an actor by nature, and one can but feel that in denouncing the drama, he is arguing against his propensities, if not against his principles.

Mr. Emerson is the utter contrast of Mr. Beecher. He stands before his audience as though half unconscious of their presence. He borrows no magnetism from them, and is in no way dependent on them. You feel that he would speak as grandly to five, as to five thousand. He scarcely acknowledges applause by the lift of an eyebrow, though sometimes the pale ghost of a smile flits across his Sphinx-like face, in response to a quick peal of laughter, called forth by some exquisite and unexpected stroke of wit. He uses little gesticulation—none that strikes you at the time, or which you remember afterwards. He falls into no attitudes, makes no points; he simply opens his lips and lets the tide of eloquence flow forth. He is the grandest human mouth-piece of the divine I have ever beheld. In listening to him, I always feel myself lifted into a rarified atmosphere of thought—cold but heavenly pure. Sometimes I breathed with difficulty, for at such an altitude lies, by no means, my native region; but ever and anon, into that upper air rise warm exhalations of human sympathies and the familiar fragrance of nature, at which I catch breath and almost feel at home again.

Emerson's language is always severely simple, yet marvelously rich and choice. His words are often thoughts, each by itself. His essays and lectures have singular unity, yet infinite divisibility. They are mosaics of precious stones—break the form into fragments, and there remain in your hands only jewels, pearls of pure thought, emeralds of nature, opals of fancy, sapphires of wisdom, and diamonds of imperishable truth. There are, perhaps, too few warm gems, rubies, and carbuncles, which always seem to me like crystalized drops of heart's blood. Yet I am not of those who believe Mr. Emerson lacking in humanity, because free from so many of its weaknesses. His sympathies are universal, rather than special; his benevolence does not concentrate on an *ism*, or exhaust itself in a "mission." It is not the smitten rock of the desert, flowing for "the chosen people;" it is "the rain, falling on the just and the unjust." Neither merit nor misfortune, kinship or saintship bound his sympathies; but they have a divine, impartial, all-comprehending scope. There are times when his spirit seems to me like a great, calm, benignant angel, brooding over the world.

Mr. Emerson is writing poetry for the Atlantic Monthly. His "Brahma" has doubtless reached you, in its own strange, enigmatical form, and in the shape of certain absurd Paddy-Blake echoes of parody. In a later number, there is a poem to "Beauty," in his own wonderful compound style—exquisite and stately, subtle and grand. There are those who think Emerson's poetry inharmonious, but I cannot think that such have cultivated the finer ear of the spirit. His poetry is one of the harmonies of the life of artistic repose, simplicity and truth which he has made his own; it is like the murmur of the pines, the ripple of winds down a forest of young leaves, the sound of waves by night—irregular, to careless ears unmusical, but timed by the pulses of nature. Very truly yours,

GRACE GREENWOOD.

Welcome Letter from Michigan.

Good influence of the Ladies Department—What a woman should know—The mother the true teacher—Woman the best nurse in sickness—Her power to remove evil habits from the community—James Buchanan no right to the White House—Woman's influence the happiest and best within her own home.

THE following acceptable letter from our correspondent in a far-off State, shows the feeling with which they welcome the FARMER, which is very gratifying to us, and we know it will be to our friends.

TALLMADGE, Mich., March 12, 1858.

EDITORS FARMER: I see the women of California and the older States take a great interest in your paper, and help you on in your arduous task, as editor and proprietor. Therefore I will just give your elbow a slight jog, to comfort and cheer you in your toil. I esteem your paper highly. And it is none the less pleasing to me, because so many gifted females help to contribute to its pages. Like Edith, I *too* am a married woman, and have a very good husband. And I would strive to elevate woman to her proper sphere. There's Grace, and Alice, and Bessie, and Sallie: I think I 'm well acquainted with you all, and dear Mrs. Farnham too. Her California "Indoors and Out" is quite amusing and instructive. I like to see women understand how to cook a meal of victuals, and wash and iron, and make beds, and sweep; but this is not all that women should strive to learn: they should educate themselves, so that they could teach their children, and nurse the sick. For is not women better qualified for a nurse than man? She has finer feelings, tenderer sympathies, and possesses a quicker insight into character, which gives her a greater tact how to apply remedies, to *heal* the body and *soothe* the mind. And her influence is greater; would she but use it as she might, we should have less whisky-drinkers, less swearers, less gamblers, and less lovers of that filthy weed called tobacco. Women of America, can, if they will, rule the whole nation. To be sure, our President is a nothing; but a half a man: *yet*, who knows, but even he is ruled by Miss Lane? At any rate, if the women had all used their influence aright, James Buchanan would never have been lord of the White House; for I, for one, never would vote for a man who is but *half* a man; and any man who has not confidence enough to get a wife, had not ought to have the confidence of the people. But I forget, you do not like political trash, so I 'll wind up, with: Women! use your influence at home; round the fireside; and when the children are asleep, use the pen. The pen is woman's sword!

Good by, for the present.

From Woodland Cottage, ROSA.

Woman in her Domestic Character.

It is in the discharge of her domestic duties that woman shines with a bright luster. Surrounded by her circle of loved ones, she, like the sun, radiates joy and gladness on all around. Self-sacrificing, long-suffering, generous and disinterested in the conscientious discharge of every duty, we find the true woman a jewel of countless worth. But in the very heart of our social structure there exists a grievous wrong—a misapprehension of woman's duties. It is perfectly right and proper, and also the duty of every wife and mother to superintend her own household and attend to the training and rearing of her children. But when labor is carried to an excess—when it is oppressive to the physical system, or cramps the mental energies, then it becomes an evil.

And it is a deplorable fact that a great number of American wives and mothers are so oppressed with household cares, together with the duties and responsibilities connected with, and growing out of the family relation, that they have no time to cultivate the gifts with which God has endowed them in consequence of such unremitting toil, both body and mind is so wearied and worn as to be entirely unfitted for reading or any intellectual pursuit.

A young man marries, and, perhaps, as should always be the case, the woman of his choice is his equal in mental attainments—is refined, amiable and intelligent—for if he has a cultivated mind, he not only wants a housekeeper but a companion. They commence life with bright anticipations of the future; ambitious to accumulate property, the wife feels that her new sphere of duties are but a pleasing task, affording her ample time for useful reading and improvement. But as property increases, so does the wife's labors and toils; with the cares and anxieties of a young family, and the fresh demands that are continually made upon her energies and strength, can it be wondered at that she becomes prematurely old—shorn of her youth and beauty in the very springtime of life, when the roses of health should be blooming on her cheek, and the fire of youth sparkling in her eye. While the husband oversees his farm, directs his laborers, or attends to business, as the case may me, taking the world easy, improving his mind, and laying up stores of useful information, ten chances to one never thinking what a relief it would be to his care-laden wife to have some time to devote to the training of her children, or to feed her starving mind.

From morn till night, and we might say from night till morning, she pursues her treadmill round in one unending routine of washing, cooking, darning and mending numberless rents in small garments. This is the programme, with variations of measles, whooping-cough, scarlet fever, or some other complaint amongst the little folks. Then it is mother here, and mother there; mother, I want a kite string; mother, Bill Jones spattered me all over with muddy water, give me a clean dress; mother, main't I wear my new gaiters; and thus it is a continual demand for mother day after day, for years. Is it any wonder she sinks under the weight of care and anxiety, which deprives her almost, if not entirely, of relaxation. And thus they pass along. The husband does not intend to be unkind, but he has from long use become accustomed to her patient devotion to his interests, or if he thinks at all, it is to wonder why she takes so little interest in things that once afforded her so much pleasure. Why is it that she never laughs and sings as of old? But the languid step and feeble frame tell, but too plainly that she is fast hastening to that home where the weary are at rest.

Now this is all wrong, and the wrong lies in that avaricious desire to acquire wealth, and with it distinction in society. It is with woman herself this reform must first commence, for she is as deep in the wrong as man. Retrenchment at home is the first step. A more simple and natural manner of living, and less luxuries at table, will be more conducive to health, and afford more time to devote to intellectual occupations and the government and training of the pledges that God has given. We would thus more truly and nobly enjoy life. "But this can only be done by a division of labor," and the money expended for help in the house, would be a thousand times repaid in the smiling, healthful, happy faces of companions.—[Indiana Farmer.

"MADAM," said a doctor one day, to the mother of a sweet, healthy babe, "the ladies have deputed me to inquire what you do to have such a happy, uniform good child?" The mother mused for a moment at the strangeness of the question, and then replied, thus, "Ah!" said she, "that is a secret worth knowing, and I wish everybody knew it: it is this—God has given me a healthy child, and I——let it alone!" Of course the lady had made few visits to the druggist's store; a secret worth knowing, truly, and an example worth imitating. There was one sensible mother.

Landscape Gardener.

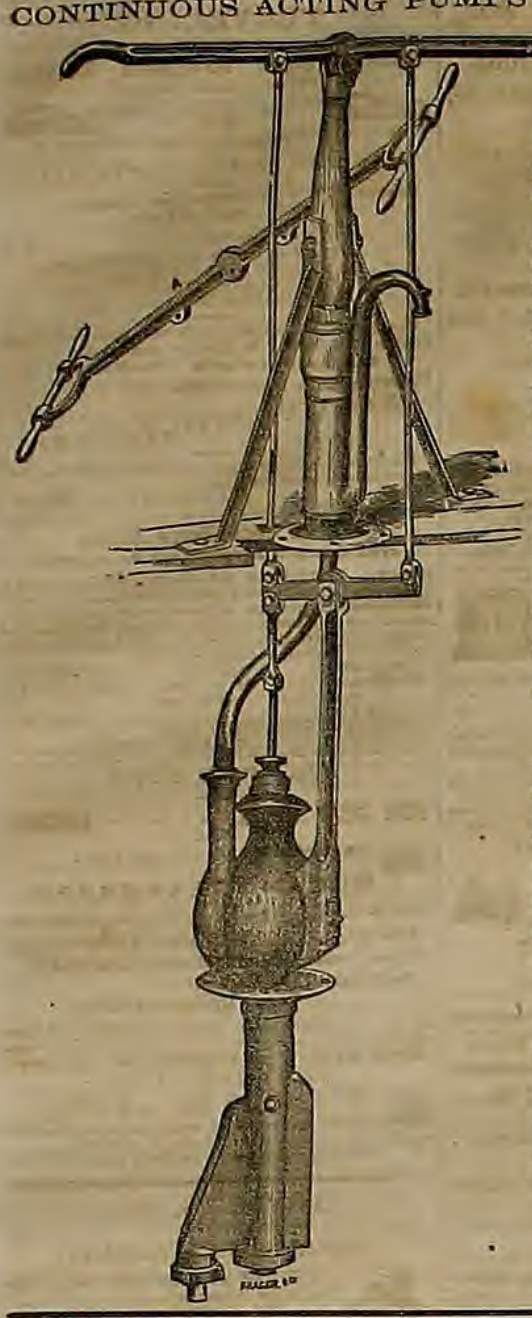
JONAS G CLARK & CO

CONTINUOUS ACTING PUMPS FOR DEEP WELLS.



The annexed cut represents an arrangement of Pumps for drawing and forcing water from deep Wells, which may be used with either a single or double lever. The standard or upper part is placed upon the platform at the top of the Well; the cylinder, with the air-chamber attached, is bolted to a plank, and placed in the Well, within fifteen or twenty feet of the water (the nearer, the easier will the Pump work).

The air-chamber is connected with the standard by lead pipe, as represented, and the water is discharged at the surface by the spout. By attaching a hose, by means of a coupling, to the spout, the water may be thrown in every direction, seventy-five or eighty feet; serving to irrigate gardens, etc., as well as to protect buildings from Fire. Discharge, at each stroke up or down, forty-two cubic inches.

By lengthening the lead pipe and connecting-rods, these Pumps may be used in Wells of any depth.

Read the following, from among many certificates given voluntarily by those who have had them in use:

NAPA, October 14, 1857.

J. S. PAXSON—*Dear Sir*: The Deep Well Force Pump, Number 10, which you sent me a month ago, works admirably, doing all that you said it would. It raises water from a well fifty-three feet deep, discharging in a steady stream. It is the easiest working pump I ever saw. My little son, seven years old, can pump one hundred gallons at a time, without feeling tired or stopping to rest.

Good as this pump is I would much rather have had the Double Pump, Number 16, but my well being too deep, would not allow me to use it. I shall take much pleasure in recommending your pumps, which I can do with much confidence.

Very truly yours,
(Signed) BOON FLY.

FORT VANCOUVER, Jan. 20, 1858.

JOS. S. PAXSON, 48 Cal. street, San Francisco:

Dear Sir: Two Patent Double Acting Lift and Force Pumps, furnished this post, through Messrs. Allen & Lewis, your Agents in Portland, give entire satisfaction, and they are, in my estimation, superior to any Pumps I ever used.

The Deep Well Pump, Number 10, raises water from a well one hundred and ten feet, and works so easily that two men readily pump a barrel full in a minute and a half, and, by attaching the hose, they throw the water, in all directions, fifty or sixty feet.

It gives me much pleasure to add my testimony in favor of your improved Pumps.

Yours, &c.,
(Signed) RUFUS INGALLS,
Capt. U. S. Army.

The above are for sale, together with many other patterns of my Improved Double Acting Force Pumps, by

MACHINES AND IMPLEMENTS.

TREADWELL & CO.,

IMPORTERS,

N. E. corner California and Battery streets,
SAN FRANCISCO,

have now landing, and will receive by every packet from New York and Boston, the most extensive assortment of

FARMING MACHINERY
and Implements,

ever brought to this market, embracing all the

Latest Styles and Improvements,

which will be sold at lowest rates.....consisting in part of

REAPERS:

MANNY'S COMBINED REAPER AND MOWER, WITH WOOD'S IMPROVEMENT.—These justly celebrated Machines have become too well known in California to require more than a simple announcement where they can be had. We are sole agents for the Pacific coast, and none genuine elsewhere.

McCORMICK'S REAPER....This universally approved Reaper we keep constantly on hand, and are Agents of the Maker.

KETCHUM'S COMBINED REAPER AND MOWER....This Machine is now very popular—having been greatly improved the last two years.

BURRALL'S IMPROVED GRAIN REAPER. This Reaper cuts six feet, and is one of the strongest and most durable Machines in use.

SEYMOUR AND MORGAN'S REAPER; without the Raker attachment and all late improvements.

HUSSEY'S REAPER....Baltimore make.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.
BOGARDUS' 2, 4, and 6 horse do do.
FIELDS' 2, 4, and 6 do do do.
EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times. Extra points and parts can always be had.

This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.
Do. CUTTERS—Several sizes and kinds; hand and power.
HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.
GRANT'S GRAIN CRADLES—In cases of one dozen each.
Do. FAN MILLS. Also, the Boston Mill.
CORN SHELLERS—Hand and power.
Scythes and Snaiths—best steel Scythes and Lamson's Snaiths.
Hay and Barley Forks—2, 3, and 4 tine; of best makers.
Carpenter's Patent Wire spring-Tooth Horse Rakes, 10 to 15 feet long, with wheels, and seat for driver.
Ox Yokes and Bows—all sizes.
Churns—Thermometer, Dash, and Cylinder; also, Dog Powers for do.
Garden Barrows. Cauldrons and Furnaces. Cultivators.
Horse Hoes. Seed Sowers. Harrows.

Field and Garden Seeds

Of every description, *viz* the Isthmus—this year's growth (1857).

Steam-Engines, 4 to 15 Horse Power.

Suitable for Ranches or Mining purposes.

Portable Flour Mills and Mill Stones—Noyes' make. All sizes, 16 inch to 4 feet.

Belting, Bolting Cloth and Packing—All kinds and sizes of the above.

HARDWARE—The best stock in the State.

MINING GOODS—All kinds in use.

COOPERS' AND TANNERS' TOOLS—Full assortment.

Baling Wire—Annealed.

Hay Rope—Best Manila.

Grindstones—Best dressed Nova Scotia; from 6 inches to 4 feet diameter, packed in casks in sawdust.

Wire Fencing—A neat article for inclosing Gardens, Heneries, &c. Also, for Ornamental Garden work Grape and Rose Trellises.

Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c, &c. 9-4

J.L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE, *Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.*

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony to its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Principal Office and Manufactory, No. 96 ARCH STREET Philadelphia, Pa.

For sale by all Druggists in California and elsewhere.

PARK & WHITE,
Washington street, San Francisco,
v7- 1y Wholesale Agents for California.

Letter from New York

New York, April 5th, 1857.

EDITORS FARMER: Ha, ha, ha! who would have thought the short letter to the citizens of California, over the signature of B. would have so stirred up the old steamship companies? That letter appeared on the 26th of February, and the next steamer was hurried through in about twenty-one days, some say in twenty days and fourteen hours. The writer *never dreamed* of such an *immediate* effort on their part.

Now I think the Californians ought to get up a subscription and present B. with a *splendid watch, and vote of thanks thrown in, for shortening the time over two days* between New York and San Francisco. Every one here was taken by surprise, even the *Company* had to rub up their spectacles several times and take a long peep at the ship, before they could really be made to believe it was theirs, at all. This quick trip makes me think of the first watch I had when quite a boy. I bought it in the afternoon for five dollars, put it under my pillow at night and went to bed, much happier than Napoleon has been, even since his baby was born. Well I awoke very early in the morning and found that my watch had gained nearly *three days* in *one night;* I was astonished, as well I might be. I felt rather mortified, and expected to be laughed at by my playmates; but after thinking a moment, my *cue* was taken, and I determined to get the laugh upon others. I went out and offered to bet a pair of gloves that my watch would keep *more and better time* than any *three* others they could produce; which was accepted, for the fun of the thing, as the boys said. The trial was made, and my watch run *one hundred and nine hours and ten seconds* in twenty-four hours. So they "gin in" and paid me the gloves, and on the spur of the moment I turned auctioneer, and put up that watch for sale. It brought *seven dollars, solely* on account of its superior *running* qualities. That was my *first* and *last* bet.

Now I do not intend to say that the Company have made this quick trip to show what they *can do*, so as to sell out at a fair advance, by the time the new line starts the ships, she will ere long have prepared, for the championship of the route. No, I do not intend to *whisper* or even *hint* such a thing, because I do not know anything about it. But to lay all joking aside, they made a glorious trip, and should have credit for it. But they must make better time, and have safer ships, or be content with what passengers they can get, after the other ships are filled. But I fear they will mostly be hauled up, and lie, like old and useless stages scattered along a new railroad line. "A word to the wise," etc.

Whew! but the news! the news! Mr. B., the news if you please! That is just what I am coming to. No one could expect me to chase steamers, and give all the news at once, as it is decidedly "agin natur" and the *Constitution*, the Lecompton included. This Lecompton, by the by, is the *keyword* to the news of the day. Kansas and Lecompton are the watchword of the political parties. Parties are getting wonderfully complicated, mixed and twisted together. The President *will*, and Mr. Douglas *won't*. Messrs. Stevens and Tombs are *quite anxious*. Messrs. Crittenden and Bell are easy, cool and comfortable. The former are fighting the air, one would think, in a complete vapor bath; the latter are calm and collected, and are keeping their powder dry. It is generally believed that the Anti-Lecomptonites can, and will carry the day. We shall see. Since writing the above, the Lecompton measure has been defeated in the House by eight votes. But the struggle is not yet over, as the bill as passed in the House, must be sent to the Senate, and as they had a majority in its favor they will not recede. "The President is *terribly riled up*, and says he is *'afeared'* he *can't stand only* about six months longer, about which time he expects to die." So says a Washington correspondent. When he came into power the Democratic temple loomed up before the world fair and comely. Now its deep foundations are marred, its massive pillars are removed, and the whole structure trembles from the base to the topmost stone. Its inmates and admirers stand aghast, beholding the plowshare of ruin, driven deeply and widely through their fair heritage, and most of those who linger around its *purlieus* will be crushed beneath its stately ruins. The party as it has existed is passing away. Another may be constructed from a new combination of the scattered fragments thrown off from all the old parties. Time will solve the great problem.

ALL WASHINGTON

Is astir on account of the near approach of Mrs. Senator Gwin's great ball, that is soon to come off. It is said it will eclipse—*something*, I forget what; guess it is the *moon*, or *stars*, as it will be in *the night*.

EX-SENATOR BENTON

Is very ill. That venerable head upon which so many fierce political storms have wildly beat is now, probably, pillowed upon a bed of death. Yet, on that bed of suffering, he works incessantly in the abridgment of his great history. He is one of the last of those master minds composing the brilliant galaxy in the political heavens, that shed such luster upon the Whig and Democratic parties, in their palmiest days; when General Jackson presided over the interests of the nation. Long, long I fear it will be, before our nation or the world will behold such a circle of intellectual giants.

McLaughlin, *alias* Paudeen, who figured so prominently in the Bill Poole tragedy, was shot a few days since, by *Dad* Cunningham. He lived some twenty-four hours after receiving the fatal shot. Truly such desperate men usually meet a violent and early death. The way of transgressors is hard.

THE TURKISH REAR ADMIRAL

Has been feted, toasted, liquored and *sandwiched* by the wise men of Gotham. They also *sleighed* him up Broadway and out upon the Bloomingdale road, during the very best snow-storm of the season. They took him to the City Hall, shook hands with him, then went with him to his hotel, got gloriously tipsy and went home, while he, like a sensible man, went to bed.

THE MONEY MARKET

Is easy; provisions are high, and yet the *tendency* of all breadstuffs is continually *downwards*. Though I do not *charge* it upon the *present Administration*.

FROM EUROPE

We learn that France is vibrating between monarchy and republicanism. The would-be regicides have been executed. Their blood dripping from the scaffold has dimmed Napoleon's star forever; he is a doomed man. The pillars of his throne are already trembling. From the circumference to the center, the empire is in a state of ferment and agitation.

During his term of power he has banished, or exiled, he calls it, over 32,000 persons from their native land. True, the greater part of them have been permitted to return, to be watched by the police. The prisons are filled with men incarcerated for political offences. Those that have returned and those now in prison, feel that the brand of infamy is burned into their hearts; it eats like a canker. The feeling spreads like a pestilential malaria, and sways the great national heart. It glows and widens beneath the comparatively calm surface. To smother it more and more, the press, that should be the palladium of liberty in all lands, is muzzled or silenced. This fervid and almost universal feeling broke out at Chalons, in acts of violence. The police did not interfere until they learned that no *republican outbreak had taken place at Paris*. This would seem to indicate such a movement was expected. Few would be at all surprised to hear at any moment, that the "Nephew" had been assassinated or driven from the land, by a terrific storm of fire and blood, that in all human probability must sooner or later sweep over that kingdom with a wild and destructive fury.

IN ENGLAND

There is nothing of unusual interest. A kind of semi-satisfactory pacification has been patched up with France, that few out of power like, and that all can see is really worth nothing.

FROM INDIA

The news is interesting and important. The commander-in-chief was concentrating his forces at Lucknow. It is stated he would have there by the 15th or 20th of February, 12,000 to 30,000 men, and 140 guns, 80 of them of heavy metal. Neenah Sahib had strongly fortified the city, and was at the head of 100,000 rebels. It was the intention to commence the bombardment of the town about the 25th of February, which would doubtless be successful in a very short time. The Punjaub and other parts of India were quiet. The old King of Delhi has been banished for life, to the Island of Andaman.

FROM CHINA

We have nothing of special importance since our last advices. Canton is yet in the hands of the English and French, and the *Americans looking on*.

ON THE WEST COAST OF AFRICA

All is going on quietly. The Colony of Liberia is in a prosperous and healthy condition. Their commerce is increasing, and the people are happy. They have recently laid the corner-stone of a University at Monrovia, under very favorable auspices.

FROM JAPAN

We learn that the ports are to be thrown open to the commerce of the world. These will include Simoda, Hakodadi, and such others as may be needed. The Emperor will also place learned professors at one of the ports, to instruct any who may wish to be taught the language and customs of the country. This movement, it is presumed, will lead to important results.

Yours, &c., B.

IN the article entitled "The Great Want of California," in your issue of the 5th of February, the last sentence of the first paragraph should read thus:

Gold and silver are desirable, a rich soil and healthy climate indispensable, it is true; but what are all of these *without population? Without the former, a State may exist, without the latter never.* B.

PUBLIC SCHOOLS.—The Public Schools have all passed their Examinations previous to the Spring vacations, and teachers and scholars are entitled to much praise. Our absence in the country prevented our accepting the courtesies extended and visiting them on this interesting occasion.

PACIFIC OIL AND CAMPHENE WORKS,

INVITE attention to the following Certificates from GRASS VALLEY:

NEW-ENGLAND QUARTZ LEAD, Dec. 23, 1857.

W. LOUTZENHEISER, Agent of Stanford Brothers, Pacific Oil and Camphene Works:

Dear Sir: I have now given those Oils from Stanford Brothers, which I purchased from you, a fair trial, and find them the VERY BEST I have ever used.

Z. WHEELER, Superintendent.

ALISON RANCH, Dec. 25, 1857.

This is to certify, that we have been using the Oils from Stanford Brothers Pacific Oil and Camphene works, for a long time, and find them of a superior quality.

JOHN ANDERSON, First Engineer.

ALTA HILL, Jan. 12, 1858.

I hereby certify, that we are now using on our Machinery, Oils manufactured by Stanford Brothers' Pacific Oil and Camphene works, purchased at their Agency in Grass Valley, and have no hesitation in saying I believe them to be superior to any other manufactured in the State.

L. CARLSSEN, Sup't Alta Mining Co. No. 2.

The SPERM OIL furnished to these Mills is worthy the particular attention of ALL who use OIL for lubricating purposes.

Proprietors of Sawmills, Gristmills, Steamboats, and other Machinery, throughout the State, supplied in quantities to suit, and quality guaranteed in all cases.

WHEELER & WILSON

MANUFACTURING COMPANY'S

SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

Rhymes for the Times.

NUMBER 2.

THE AGE OF PROGRESS.

Hail Progress! thou friend of the fearless and free!
Thou hope of the slave, and support of the true!
Is there any condition so dark but can see,
Through some chink in its cavern, a glimmering view

Of the aid thou art bringing for Freedom and Man,
Of the fights thou art fighting, the deeds thou art doing,
Thy achievements accomplished, thy power, and the plan
Of the checkless career thou art ever pursuing?

Thy plan is the Deity's; destined for us,
As our work to be done in the glorious cause,
Which restores to their rights the downtrodden, and thus,
Makes Oppression submit to benevolent laws.

In India, misgoverned, misguided, misused,
Where Religion was slighted, and Mammon adored,
A barbarous and bloodseeking race had infused
In their veins, from their fathers their hatred, restored

In redoubled vindictiveness, rapine and crime,
So hideous and odious, that never before
Had the World such wickedness witnessed, or Time
Had a look so heartrending as that which he wore.

At Lucknow, a few had contrived to maintain
A precarious, half-hopeless, half-desperate chance,
From the thousands of ruffians opposed, to retain
Their position of peril, till aid might advance.

But day after day did but plainly appear,
That their foes were increasing, their fate but more nigh,
And heroes and heroines, strangers to fear,
Were prepared for the evident sequence—to die.

Cheer up, little band! the old General is near!
No ruffians shall harm you, for Havelock comes!
Your danger is past—ye are saved—don't ye hear
The Highlanders' pibroch, the roll of the drums?

The Campbells are coming; those heroes have fought,
To relieve you, nine battles, and won; shall we twine
Them a wreath, as an emblem of honor so bought?
Or recall their old glory in days of *lang syne*?

They are emblems themselves. Thus Progress comes on;
Though opposed, it but battles till victory smile.
For Priestcraft—it need not oppose it, for gone
Is the age, and the men, that were gained by its guile.

And Tyranny totters, and ponders the past,
And tries to keep back what it cannot evade,
And fears least aggression, the next, be the last,
While it flees its own mischief, mistakenly made.

Hail Progress! thou friend of the fearless and free!
Thou hope of the slave, and support of the good!
Whatever may come, we rely upon thee,
And will stand in thy cause as our fathers have stood!

AGRICOLA.

MILLERTON, April 24, 1858.

[For the California Farmer.]

More About the Ant upon Fruit Trees.

PEACHVILLE, Stanislaus county, May 1st, 1858.

MESSRS. EDITORS: Perceiving from the FARMER that others, as well as myself, have been annoyed by the depredations of the ant and the tree-louse upon the blossoms and young leaves of their fruit trees, and hoping that my experience may be beneficial to some of the readers of your valuable paper, I have concluded to give you the result of some experiments upon the aforesaid fruit destroyers. I tried the same means that Mr. Norris did, with the same result. I also tried the poison that I use for killing flies. This, too, was a failure. Finally, I took raw cotton, picked it up loose and fine, wrapped it carefully around a twine and wound the twine around the stock of the tree, so as to cover about six inches in length of this stock; afterwards by keeping the cotton always loose and fine the ant cannot cross it; many of them became tangled and died in the cotton. A piece of buffalo-skin with the hair on it, tied around the tree, will prevent a great many from ascending. I also found that tar is very injurious to young trees. Ants destroy the tree-louse, and the blooms also. I prefer, therefore, to prevent the former from eating my fruit blooms, and kill the latter myself, which I have done successfully in the following manner: I boil the stalks and refuse leaves of tobacco in strong soapsuds, then add ground red-pepper until it is pretty strong, and having no syringe I sprinkled this on the lice with a white-wash brush, and then cleaned my trees immediately of the most troublesome insects. A syringe is the proper thing to apply the wash with, as the lice will be found mostly on the under part of the leaf, and it is therefore difficult to apply it with a brush.

Hoping that this may benefit some one, or that from these experiments some better plan may be discovered to answer the end desired, I am, with with much respect, your humble servant,

JAMES BURNEY.

P. S. Please accept my thanks for the seeds you sent me. The corn, mammoth squash, and pie-melon, are already up and growing; also some of the flower seeds. This is rather fast, but nevertheless it is true. Yours, J. B.

Mary Glen upon Flour Speculators.

"Come not between the Dragon and his wrath."

"When woman wills, she wills, you may depend on't!
And when she won't, she won't, and there's the end on't."

There will be trouble in the camp if the price of flour holds above its value a few weeks longer. We have the Bulletin giving the "cost of living," from the rich mansion to the humble cabin, and all the various discussions of the day upon the causes of hard times, and now the storm is brewing for those who have *raised the price of flour*, and we fear (?) the excitement will be worse than the troubles in New York among the bakers. What a terrible thing it would be if the women of our State should resolve to *eat no flour*, till the price came down, upon the principle of olden time when they would drink no tea. Whew! what a time they would make of it. The Mormon war is nothing to it. We verily think the delay of Uncle Sam, in raising recruits, arose from the fact that he felt that the women would beat the whole army.

But we must set "Mary Glen" right upon *one* matter. We don't think we favored the flour speculators much; we have a clean breast there; and *now* "Mary Glen" may calm her anger; the *charm* is broken. Those *mansions, gardens, diamonds, fast horses, champagne, &c.*, are all in the moon. Mary's wish is granted—the flour speculation is broken, and the women and children, the widow and orphan will soon have bread enough and to spare. Thank God!

We had just finished an article upon the same subject, the last week, and sent it to the press, when Mary's letter was placed in our hands. We began to grow pale with fear, as we read of the storm gathering over our head; we thought the air grew dark; we thought we heard the roar of something; the blood rushed to our heart, as Mary told of hunger and famine; but when we came to read about the *riches*, the *wealth*, the *magnificence* of the homes of the *flour speculators*, verily a flash of light came o'er us, and we *wilted*. We didn't roar—yes we did, though, with laughter—and, like the raging sea, we tossed and rolled on our carpet with convulsions of the same spasms.

But here is Mary's letter, and with her we leave the subject:

SACRAMENTO, April 25, 1858.

COL. WARREN: I am going to express my thoughts to you plainly, Colonel, and, if you get offended, I can't help it. I always speak and write as I think. I noticed in your paper, last week, your opinion about the monopoly of flour, and an article about the ocean steamers, and you rather leaned towards the monopolist. Now, Colonel, I do not like monopoly in any way, shape, or form; I do not think it is right, and I suppose we will be likely to have a war of words, and with the pen. I do not care; I have the spirit of '76, and will stand my ground as long as I think I am right, and I do not think you are right, Colonel, to favor the monopolist. I know that I am "bearding the lion in his den," and I expect to hear a loud lion's roar soon from you; but I shall advance fearlessly. Now, to commence, "I wish I was a man:" I would become a member of the Legislature just long enough to pass a bill prohibiting monopoly, and then I would take my hat, and, with a very polite bow, leave that *honorable* body in double quick time; but, alas, I am a woman; and must I look on the events passing around me in silence? No! I won't be silent! a woman has as much right to speak as a man; and, if she does not say things quite so smart, she feels as deeply, the wrongs done to the human family, as quick-witted and smooth-tongued men. The members of the Legislature are often called upon to sign their names for a complimentary benefit, for some professional humbug, or to pass a bill through the house for one person's aggrandizement. These things they are often called upon to perform, and why should they not have their attention called upon when men, women, and children are all interested. We look to them to make laws to protect us. They perhaps will say it is unconstitutional, and in all other countries there are monopolies, and that they have no right to make such a law. If they have not the right, who has? Shall a few mercenary individuals control the thousands in this country? Shall half a dozen flour cormorants dictate to the people of California, that they must pay two-thirds more for flour than it is really worth, or, else, they cannot have it? depriving poor people of the means of obtaining other provision for their families. Colonel, is it right? I ask you, is it justice? I am sure, with your good heart, you will say no, it is not right, if you do lean a little towards the monopolists. Is it not in the power of the members of the Legislature, or the people themselves, to regulate the price of flour? This is supposed to be a free country, and yet, in this instance, there is more despotism displayed than in any monarchical government in the world. Shall we be governed by a few despots who choose to put up the price of flour, whenever they think they can make a fortune out of the people? There should be a law made to remove this evil. I speak the thoughts of thousands of my own sex. Colonel, think of the many children in this fair land; many of them with poor, honest, toiling parents. Does not bread taste good to these little ones, and shall they be deprived of it by these *flour cormorants*. These men, before this flour speculation, were wealthy enough, with all the luxuries of life, and now, in these hard times, when money is scarce, and laboring men can get but little employment, must their last dollar go for this usorious price of flour? and some have not even a dollar to buy flour with. Must they hear their children cry for bread, and know they cannot procure it for them? *Forbid it, Heaven!* Just men, come forth to the rescue; wives, mothers, sisters, little children, all call to you to put this monopoly down, and regulate the price of flour. Oh, men! the field of humanity is large and broad. There is much labor to be done. Throw self aside, and labor hard. Your guerdon and reward shall be beauty's smile, from many a grateful heart. Now, Colonel, there is a reward—beauty's smile—is not that worth laboring for? Think of these would-be princely flour merchants; enjoying all the luxuries of life, living in elegant houses, splendidly furnished; beautiful grounds, highly cultivated; tables loaded with silver, and all costly ware, and covered with every delicacy this country affords, regaling their rich friends; their wives and daughters dressed in silks, and loaded with diamonds; elegant private carriages, with footman and coachman; their houses filled with servants to wait upon them. The gentlemen of this flour monopoly keep their fast horses, attend theatres, dress elegantly, drink their champagne, and discuss the merits of the different brands, as if it was not purchased by defrauding the community in charging them an exorbitant price for the staff of life. And yet these men, these high livers, these men who take the bread from poor people, from little children, that they may revel in their gluttony, if a poor person asked them to bestow a favor they would consider they were highly insulted. These men and their families rolling in luxuries, obtained by over-charging for flour, while thousands are almost starving, because they have taken their little pittance away. Oh, shame, that such legalized dishonesty should walk safely abroad, while so many, for slighter offences, in my opinion, are placed upon the prison-brig, or in the chain-gang, or sent to the State's prison. I know there are many good and generous, and high-toned men, and men of family, who look with disgust upon monopoly, and, if it should continue, would take a straightforward course to put it down. I have talked with many of my sex in regard to this matter, and they wish me to express my opinion of this evil, and send it to your paper, Mr. FARMER.

Now, Colonel, I have had my say; my mind is unburdened, and I feel relieved, and shall feel more so when all those flour cormorants are "broke" by their unworthy extortion. You shall hear more from me next week, about the ocean steamers monopoly. I hear a terrific roar from you about woman's audacity, meddling with flour, and steamers. I cannot fear in the cause of right; so growl on, Mr. Lion. MARY GLEN.

Essay in the Agricultural Report—Correction.

EDITORS FARMER: For an Essay on Alkaline Soils, Tulé Lands, and Salt Marshes, the Agricultural Society was pleased to award me a premium of one hundred dollars, and has considered it deserving of being printed along with others as a portion of their Annual Report. It is in general very correctly printed, and must have received pretty close attention to make it so; but, as may be seen at page 172 (Note 31), of the Society's pamphlet, the analysis of Tobacco as quoted from Professor Johnston is altogether wrong—the Potash ingredients, as well as Phosphate of lime, being omitted, and those of Soda placed opposite Potash, while Soda, again, gets credit for being contained in Tobacco to the same extent as Lime is; and so on erroneously almost to the end of the list. The Table should have been as follows:

Potash	12.14
Soda	0.07
Lime	45.90
Magnesia	13.09
Chloride of sodium (common salt)	3.49
Chloride of potassium	3.98
Phosphate of iron	5.48
Phosphate of lime	1.49
Sulphate of lime (gypsum)	6.35
Silica	8.01

Such occurrences are nothing unusual; and no blame ought to be attached to the printer, and little to any body else. It was a mere oversight. You will oblige me, however, by publishing this letter in an early number of the FARMER, especially as my reasonings in regard to Tobacco, by an examination of the constituents as represented to be given, do not, I confess, appear to be very well supported.

I regret that the Society did not see fit to have the proof sheets sent to me before publishing. It is a pretty long essay, and there are several verbal alterations which I might have wished to make (for which the printer is not in any way accountable).

If I could have procured a copy of the Society's pamphlet sooner, I would have taken an earlier opportunity of pointing out the mistake. It is to be hoped we shall get into the right way of doing things by and by.

Respectfully, WM. THOMPSON.

MILLERTON, April 27th, 1858.

OSAGE ORANGE FENCES.—The Southern Planter says, regarding this plant for live fences, which should be extensively cultivated: "Beyond all question, we think that the Osage Orange is better suited for hedges in this country, than any and all other plants which have been offered to the public. Its superiority is seen in that it is a native of the country. It is of very rapid growth, and the number and size of its thorns render it a terror to all animals."

A FREAK OF NATURE.—William Davis, of San Antonio Creek, has left at the office of the Petaluma Journal a chicken possessing four legs, four wings, and two tails; in fact, a perfect double chicken, minus one head and neck.

To Preserve the Chinese Sugar-Cane.

I NOTICE in the October Number of the Cotton Planter and Soil, a request from "Putnam," how to preserve the Chinese Sugar-cane.

I have adopted this plan (and, by the by, it is the plan used in Florida), to preserve the seed cane through the winter, for planting in the spring:

First. I dig the Chinese Sugar-cane up by the roots, leaving as much dirt as will adhere to them; cut the seed off, leaving the stem two or three inches; the seed is placed in the little piles. After the seed is cut off, it is taken to an out-house, and spread carefully on the dry ground in the shade, until thoroughly dried, then put up in barrels.

Second, I have a bed prepared, dug up, and raised some four or five inches above the level, ten feet wide, and as long as necessary to bed the cane. The cane is then placed horizontally on the ground, the tops the same way; the next course, the roots are placed as close to the first layer of roots as can be, and covering the first layer, the third course is placed in the like manner, and so on through the bed. (I should have remarked sooner, the fodder or blade is not stripped from the cane.) By laying the layers, in the manner above mentioned, the cane bed will be from four to five feet deep, and not a root exposed. In the last layer the roots are protected by covering them, one or two feet thick, with grass or straw, and covered with dirt sufficiently thick to retain the moisture in the roots. There is great danger of heat, as the cane is apt to take a second growth; this must be guarded against by opening the bank occasionally. As the cold weather approaches, to prevent the cane from freezing, the sides of the bank must be protected, as the roots of the last layer, and the whole bank should be covered with straw in dry cold weather.

Early in September, I had my Chinese Sugar-cane banked up as I have written; the cane is, at this writing, much sweeter than when out, and I shall let it remain until I am done picking cotton, or a more convenient season for grinding.

In the September number of the Southern Cultivator, you will see a plan for building "a good and cheap sugar-mill." I have had one put up exactly according to the directions, and find it works well.—[Thomas J. Holmes, in Cotton Planter.

Heavy Fly Wheels and Grist Mills.

WHILE some correspondents have written to us, says the Scientific American, stating that heavy fly wheels were positively necessary to prevent backlash and to produce equable motion in flouring mills, Messrs. Hatfield & Smith, of Cuyahoga Falls, Ohio, inform us by letter, that after several years experience, they have formed the opinion that "a heavy fly wheel is but a poor remedy for a badly constructed steam engine." They assert that if a steam engine is proportioned, with the valve arranged for the work it has to perform, it will run well with a light fly wheel. The performances of the mill engine described [on page 208] whereby ten bushels of wheat were ground to each bushel of fuel consumed, they consider good. They (H. & S.) have put up an engine of 12-inch bore cylinder, 24-inch stroke, boiler 26 feet long, 42 inches in diameter, with two 16-inch flues, set in brick arch, which turns out sixty barrels of flour in twelve hours running, using thirty bushels of slack or dross coal, which only costs one dollar per ton in that place. This mill belongs to Mr. Thayer, of Akron, Ohio. If we allow four bushels of wheat for each barrel of flour made, no less than eight bushels of wheat are ground to each bushel of slack consumed. This is doing good work certainly. They have also put up quite a number of engines of the same character for other parties, both for grinding grain and sawing wood, in which coal, wood and saw-dust are employed for fuel, and with the same satisfaction as to results. They gear their engines for the piston to travel at the rate of *five hundred feet* per minute; cut off steam at half stroke, and use a single slide valve.

GLANDERS.—"An old doctor, whose sands of life have almost run out," recommends the following prescription, for this loathsome disease. Take one *powder*, and one *blue pill*, as follows: One table-spoonful of Dupont's best rifle powder, and put it into the mouth of a good musket, and ram down the paper on the top of it, then take one blue pill of lead of an ounce or less in weight, and ram home on the top of that, and then go to the patient, *in the stable*, and go through the manual of firing; but be sure to kill the horse, and burn him, and the stable, bridles, and everything that has come in contact with him. Though if the stable is a very valuable one and has not been much contaminated, *it may be saved*, by thorough cleansing, scraping and washing with chloride of lime, and then fumigated with chlorine gas.

The writer of the above, says the Veterinary Journal, is rather a sensible fellow, and it is a pity to see him die for want of a supply of *sand*. If he will give us his address, we will supply him with all the sand he needs for the next twenty years; so that his "sands" shall *not* run out. N. B. If the Old Doctor will just mix a little corn meal with his "*sands*," they will last longer.

CANAL IN THE TULARE VALLEY.—George Y. Hight writing to the Sacramento Visitor, of a recent steamboat trip up the upper San Joaquin, says: We found the [Tulare] Canal Company prosecuting their work, by using a large plow, with some twelve yoke of oxen. After breaking up the earth in this manner, they use the same team with two scrapers, by which they remove the soil from its original place. Their intention is to gradually deepen the canal as it approaches the lake; and as they have about fifty-six feet fall, the water (after the tulé root is once broken up), will, in a few days of high water, make up a large river between the slough and lake, thereby extending navigation to Kern Lake.

The Economy of Shelter.

The annexed article, from the Country Gentleman, published at Albany, N. Y., is intended for a climate subject to a long, cold winter and a wet spring. All the arguments used to enforce the facts presented, are full of sound truth, as experience has shown; but we present the same subject here, feeling it to be absolutely needed in our climate also. The long-continued rains during our wet season, and the burning suns of our summers and both of such power as to demand shelter for our stock. It will be recollected that we have urged these facts upon stock-raisers repeatedly, and we are glad to be so strongly supported by a journal that stands so high as the Country Gentleman—a paper that should be known in California widely:

It has been demonstrated, very satisfactorily, that a *hundred feet of boards, properly used, would go as far in wintering stock, as several tons of hay.* It is a necessity in this climate of cold and storm, that shelter be provided. Not alone for stock—shelter is demanded by the farmer himself, by his grain, his tools and implements, &c.

The farm-house should be the perfection of shelter. It should shut out the cold winds, keep out the rain, and, as far as possible, be made frost-proof in winter. Care in banking up in autumn, to keep the cold air from circulating under the floors, will save several cords of wood during the winter, or, more likely, much suffering from cold feet, for few houses can be kept warm by any expenditure of fuel, with a temperature like that of the outer air prevailing beneath them.

Shelter for all our grain and hay, is also the best economy. There is ever some loss in stacking—in a few years it will amount to enough to pay for a barn. A good roof, at any rate, should cover every building of this kind, whatever be the charter of the siding.

Stables for horses and cows should always be provided. We cannot expect either milk or work from an animal which must spend its nights out of door, shivering away what little vital heat it may possess. Comfort should be the state aimed at—to keep stock always contented and comfortable.

A shed, properly located and protected, goes far to answer the purpose of a stable, and every barn-yard should be surrounded by them, or nearly so. Their value does not stop with the protection of stock; they save also the manure which accumulates under them. It is labor well applied to place all the manure removed from stables under the sheds used for sheltering stock, keeping them level and well littered, that they may still answer their original purpose.

He is no economist who neglects to provide shelter for his farm implements when not in use. Their "wear and tear," unless protected, is largely increased, and the loss to the farmer from this cause alone, would suffice to erect a good tool-house in a very few years. This is also true of his various vehicles; and the *shelter of paint* should be looked to, and all wood-work repainted as it needs it.

The wood-pile should be sheltered. That good seasoned wood makes much the best fires, needs no enforcement of illustration, yet how often is there neglect to provide it. A suitable wood-shed should be one of the out-buildings belonging to every dwelling-house, or other structure warmed by the consumption of wood, in the country. But the neglect often goes deeper than this. There is shelter for wood, but little or no wood to shelter. The stock is so small, that it has no time to dry before it must be used.

Ticks and Lice on Animals.

I mean to be understood to say, if sheep are kept in a thriving condition from the time they are yarded in the fall, until they have good pasture, that they will have no ticks on them, or at least they will have so few that they will not be worth noticing, and require no application of anything to destroy them. But there are causes of propagating ticks that require an observing eye to detect. In the first place, if yards are not regularly littered, and the sheep are *forced* to lay on their own dung, even if dry, they will not thrive; and then they will have ticks plenty, even if this littering should only be omitted for a few weeks; or if their yard is wet, so that their feet become soft, they lose condition, and ticks immediately follow; or should they have to feed on damaged hay for three weeks, ticks will follow. In fact any thing that impairs their health or growth, brings ticks; and very often the best wintered sheep are made to propagate ticks, by being turned to the pasture-fields in spring before the pasture has grown, and then they will have great quantities of ticks at shearing time. They go from the old sheep to the lambs. Keep your sheep thriving all the time, Mr. B., and the ticks will not trouble them. *This I know.*

Did Mr. B. ever see a well-fed, clean kept boy or girl, over-run with lice? I think not; but I have seen many ill-fed, ill-clothed, dirty kept ones so. Some such reasoning, how the human family should be kept, has led me to many improvements in keeping domestic animals, especially in good feeding, and plenty of air where cattle are stabled. What makes people propagate lice when crowded in the steerage of vessels for a month or more? Nothing but want of air and bad feed; and nothing but bad feeding, want of air or cleanliness, makes sheep, cattle or horses, *lousy*. If men would always do by their stock as they would wish to be done by if they were in their place, we would hear no more inquiries as to what will "kill ticks on sheep, or lice on cattle or horses."—[Com., in Country Gentleman.

Improved Breed of Animals.—Among the various plans that are in progress to improve the various breeds of stock, we hope some one who is qualified to judge correctly upon the relative value of stock, will test the capability of the Spanish cow. There seems a sprightliness, an activity, a grace of action, and a constitution so well fitted to this climate that we would wish to see these qualities preserved in the cross with any other breed; and as the other good qualities which are desirable, such as form, flesh, milk, and general beauty, are to be found in the Durham or Devon, we hope our stockmen will make careful experiments, for we fully believe, from what we have already seen, that by the cross of the Durham and some select Spanish stock, in three removes we could produce some of the handsomest as well as the best stock known, so confident are we that we should use the *native* stock to breed from, so as to secure a character in the animal adapted in part to our climate. We hope to hear from our practical stock-raisers on this subject.

State Agricultural Society's Reports.

(CONTINUED.)

SUGAR, SALT, STARCH, ETC.

The committee chosen to judge of the following articles, viz: refined sugar; California salt; sugar, from Chinese sugar-cane; sugar, manfactured from any California product, promising to be profitable; California starch, whether manufactured from potatoes or wheat; mustard, spices, etc., prepared from California products; honey, lard, soap, oil, vermicelli, macaroni, etc., beg leave to submit their report, as follows:

Of sugar, manufactured from Chinese sugar-cane, there was no sample on exhibition. The only sample of refined sugar was from the San Francisco Sugar Refinery Company, which is consequently entitled to the premium. They had on exhibition samples of coffee-crushed, granulated, powdered, crushed and loaf sugars, of superior quality, and, in our estimation, fully equal to any imported from the Eastern cities.

In salt, there was no competition, the only sample exhibited being that marked No. 4, Boom Greenwood, which, we would remark, is of excellent quality.

The premium for the best fifty pounds of sugar, manufactured from California products, is awarded to Mons. Eugene Delessert, of San Francisco, whose exhibit of sugar, of different varieties, manufactured from the sugar beet, we regard as one of the most important and interesting features of the whole exhibition. We examined eight different grades of sugar, manufactured from beets raised from seed which arrived in the country only four months since. Mons. D. has labored under great disadvantages, from the imperfect machinery he has been obliged to use in the refining process; but, notwithstanding these difficulties, he has succeeded in producing an article, which, in every respect, will compare favorably with the best imported from abroad. Sugar manfactured from the beet is extensively used in France, Germany, Austria, and other European countries. It has been demonstrated by actual experiment, that our soil and climate are admirably adapted to the growth of this species of beet, three crops of which can be easily raised in one year, and one acre yielding, as we are informed by good authority, from forty-five to fifty tons. We learn, further, that the capital required for manufacturing is very small, in comparison with that for sugar-cane. We regret that we have neither space nor time to enter more fully into detail, but we are satisfied that all the sugar required for consumption in this State can be supplied from this source. In view, therefore, of the immense saving that would ensue to the State, by the production at home of so important an article, and the great source of wealth that would thus be opened, we feel that we cannot too earnestly recommend the subject to the consideration of the people of California.

For the best exhibit of mustard, spices, etc., prepared from California products, the premium is awarded to H. C. Hudson, for his Golden California Mustard. We must express our regret that the condition that the spices should be manufactured from California products, excludes from competition the splendid assortment of spices and coffee exhibited by Messrs. Wm. H. Bovee & Co., of San Francisco. From our examination of their specimens we can, without hesitation, pronounce them, both in reference to quality and style of package, far superior to any imported article. We can state, of our personal knowledge, having been most of us acquainted with the firm for some years past, that this enterprising firm, from the great excellence of their articles and the low price at which they have uniformly sold, have succeeded in a great measure in checking the foreign importation. The article of ground coffee, alone, which a few years ago was shipped to us from the East, they now supply, to the almost fabulous amount of one hundred thousand pounds per month. In consideration, therefore, of the great saving thus secured to the State, not only in the amount of labor employed, but the consumption of lumber and other State products required in the prosecution of their business, your committee would recommend that a special premium be awarded.

We found but two specimens of honey, and have awarded the premium to No. 84, Wm. Buck.

Best exhibit of soap, No. 16; J. P. Dyer.

No. 41 comprises a splendid assortment of sperm, polar, black-fish, seal, solar, coast and tanners' oil, from R. F. Knox & Co., San Francisco, to whom the premium is awarded. Although no premium has been offered for the article, we would call your attention to a fine specimen of sal soda, from the same firm, and recommend that a diploma be awarded.

The premium for the best sample of vermicelli, to the same party. In this, as well as in many other articles that enter largely into consumption, your committee is pleased to notice the high degree of perfection to which our manufactures have arrived.

In taking a survey of all the interesting and useful articles on exhibition, every one who feels an interest in the prosperity of our young and growing State, must be gratified to observe the rapid progress that has been made, and encouraged to hope that the hard earned gold that is now carried off by every steamer, will remain to enrich our own citizens and not the foreign speculator. H. T. Compton, Ch. Committee.

ESSAYS.

The committee appointed by the State Agricultural Society, to examine essays, beg leave to report that they have given much time to, and have perused carefully the essays submitted, and find all of them possessing much merit.

The essay on alkaline soil, by William Thompson, is a work of much thought and study, and full of interesting information—the author treating elaborately on alkaline soil, tule lands and salt marshes, and extending his research to plants, vegetables, etc. It is a production of much merit, and will be read with interest by the agricultural community of our young and growing State.

Your committee would recommend the essay, by William Thompson, for the first premium.

The essay of William Simpson is entitled to the favorable consideration of the Executive Committee.

The essays on gophers and squirrels, in which some excellent ideas are offered, your committee would class as follows: that of John Streutzel, No. 1; Michael McCartnay, No. 2; L. K. Chalmers, No. 3.

The essay on quartz mining, by Frank Cone, is worthy of your consideration—the author having gone fully into the present modes by which quartz mines are worked. It is to be regretted that there is no competition on this important subject, as the author of the essay submitted does not advance any new ideas. Quartz mining is of so much importance to the interest of our State, your committee recommend that the officers elect of the State Agricultural Society, offer more liberal inducements for essays on that branch of mining, by which, without doubt, new suggestions would offer.

All of which is respectfully submitted.

Samuel Purdy, C. M. Hitchcock, Committee.

Saleratus.—I see advanced as a scientific truth, that saleratus in bread is a prominent cause of destruction of teeth, which is undertaken to be proved by the fact that in an experiment, a tooth put in a strong solution of it was found to soften or decompose. It is probable that strong acrid applications may accomplish this, for even gold may be dissolved; yet that the slight admixture (even the strongest) of saleratus in bread, will damage the teeth, I do not believe, but rather that the teeth are generally injured by hot or cold viands or drinks. This is proved by the fact that almost universally the upper teeth decay first, because through them, everything passes when first entering the mouth; consequently hot and cold things come first in contact with them, and with the double teeth; but the under teeth being protected by the tongue and lip, are not reached till the condiment has got tempered by the saliva, whereas acrid substances settle more around the lower teeth than on the others; but the lower teeth seldom decay except when constitutional disease exists.

I write this to prevent alarm among our farmer's wives generally, for although I detest saleratus bread or cakes myself, yet I know it to be a common and very handy ingredient in bread and cake making in the country, and I therefore think it unfair to injure its character undeservedly.—[W. T. L.

Artificial Coal.—A curious communication by E. Baroulier has been sent in to the French Academy of Sciences, describing a method for obtaining a substance possessing all the properties of coal. It is a fact generally admitted by geologists, that coal is the result of the carbonization of vegetable matter by heat under a strong pressure, and under circumstances calculated to impede the escape of their volatile ingredients. M. Baroulier proceeds in a similar manner; he envelopes vegetable matter in a wet clay, and exposes it for a considerable length of time to a great pressure, and to a heat of between 200 and 300 degrees centigrade (or the melting points of tin and bismuth nearly). Various kinds of sawdust, subjected to this treatment, yielded different substances, possessing more or less the resinous luster and color of coal, and burning with a bright flame.—[Galigni's Messenger.

Singular Death of a Cow.—A neighbor of mine lost a cow a few days since, in a manner so singular that I will ask you to place it on record. On Sunday morning she was found standing in her stall exhibiting signs of being choked. Several antidotes were given without relief. On Monday morning I saw her still on her feet (which she kept till she died) exhibiting signs of great distress in breathing. Froth and saliva in large quantities came from her mouth, her tongue was out a part of the time, and a jerking tremulous motion of the head was made at each breath. I thought she must die, and no further medicine was given. At 3 o'clock, PM, she died. On opening, her lungs were filled in all the principal air pipes with masticated food, and the conclusion was that she had swallowed her cud the wrong way.—[Com. in Cntr'y Gen.

Hens and Eggs instead of Dogs and Cats. A correspondent of the Country Gentleman well remarks: "Those scraps from the table which are often given to prolong the existence of some ugly, raw-boned, snarling, sheep-stealing cur, would suffice for several hens, which ought to take the place of said dog." Instead of keeping dogs and cats, we have made pets of a dozen fowls—last summer's chickens—and the pullets, eight in number, have supplied us abundantly with eggs—laying in seven weeks after Christmas, sixteen dozen. Two of the roosters weighed, when dressed for cooking, four pounds each.

The Atlantic Telegraph.—The London Times announces that the general programme of the second, and, it is to be hoped, final attempt to submerge the Atlantic telegraph wire, has already been decided on. The 400 miles of cable ordered to replace the 384 which were lost last autumn off Valentia, have been completed, and it is intended, in order to make better provision for casualties, that an additional 300 miles shall be at once proceeded with. The Agamemnon and the Niagara are the vessels again to be employed in the attempt to lay the wire, and the operation will, this year, be commenced in the middle of June, in which month, it is said, there are some five or six consecutive days during which a gale in the Atlantic was seldom or never known to occur. The line will be joined and laid from the centre of the ocean, the Niagara bringing her end of the cable to Ireland, and the Agamemnon conveying hers to America. The Agamemnon was to leave New York and she is daily expected at Plymouth, where she will take on board, at the Keyham Dockyard, 1500 miles of the wire. On this occasion the cable will not be piled away in one huge mass, but will be distributed equally in the fore, midship, and after-part of the vessel, in three coils of 500 miles each. As soon as the wire has been stowed away, the two steamers will proceed into deep water, when a number of experiments will be made with the paying out machinery, to ascertain, practically, if any difficulties exist in the proposed plan for submerging the wire from the centre of the Atlantic.

Vance & Co.'s Galleries, Sacramento and San Francisco.—We paid a hasty visit to their new gallery, the past week, and confess we were surprised to see the rapid progress made in the collection of superb artistic pictures upon the walls. The first that called our attention were the Senators of our Golden State. Now, of course, we have no grist to grind, no office to ask; but no one can look upon those thirty-four pictures (and they *are* pictures, forgive us, gentlemen, we mean *artistic pictures*) and not say they represent as noble *looking* a set of men as any State can boast of. For ambrotyping, daguerreotyping, and photographing well, we like Sacramento, and we think the Gallery there *almost* equal to Vance's Gallery here—which is saying a great deal; for we do not believe there is a gallery of this art in the United States, where the artist takes more pride or pains to render satisfaction, than in the Galleries of Vance & Co.

Appeal to Mothers and Teachers.

The following heart-stirring appeal will we trust find a hearty response in the heart of every mother that values the permanent happiness of her children; it is a noble and truthful appeal to the highest motives that can actuate the human heart. The subject of Home, selected by our able and esteemed correspondent N. B. H., has been most happily chosen. The subject is now in good hands and under good guardianship. From "Oak-shade" we look forward for thoughts that shall spring from thence, and like the oak become mighty as they expand and grow, so that many thousands shall rest beneath the "Happy Country Homes" that have been called into existence by the influence of N. B. H., and from each shall go forth a plaudit of blessings for her glorious teachings. Happy indeed must be those children that grow up under such culture, and happy indeed that home where such a spirit dwells.

—

Oak-grove Farm, Santa Clara county, April 25.

Friend Farmer: Pursuant to notice I now take the subject of Home. How many holy associations cluster round, and are associated with, the one word *home!* Yes, a volume of pleasurable emotions spring up in the memory, that have occurred at home. Parents and loved ones are remembered in connection with our former home, while we were ignorant of much of the realities of life. Home, present, with all, is a reality, whether it is a cottage or a palace. My former home in San Francisco is to me a loved spot. I left it with a tearful eye and a full heart, for this place, my home in the country, again to settle myself among strangers. I had been so long deprived of the society of my own sex in the city on our first making a home there in 1850, that I dreaded again going among strangers to make new friends. But we wished a home in the country most especially on account of our family, one little boy who seemed to thirst for a wider or broader field of action than the city afforded him. He longed for the country, the trees and the fields; all were new to him, all untried by him they promised much happiness. Truly he enjoys his freedom here, to the fullest extent, and with the assurance in my mind, that here I may trust him without the fear of contact with those of his own age who have been only more unfortunate than he has; perhaps uncared for by any one until old in iniquity, while in age they are yet children; poor little children, how I pity them. I wish all were blessed with homes in the country, until they were redeemed from their present degradation. Where is a refuge for them, where they will be treated with affection, and instructed in the duties of life, O where?

Since I came to this place I have adopted a female child, an orphan. I love her, and trust she will love me. I prize my present home on account of the freedom it allows, yes, the perfect freedom to children. Surely the country is the best home for the young. In the city I was ever restless when my boy was away from me! I saw so much of children there that shocked me, I feared for him. Here there are none to lead him into immoral practices; all are busy here, there are employment and happiness for all; the young can be allowed to exercise their physical powers as they wish, at work or play. I am not in favor of compelling children to the acquisition of book learning, a sentence of which they do not fully comprehend. The requisite confinement in doors to acquire it is positively injurious to most of them. Here in this quiet retreat children can be taught much of practical utility; they can also learn much of the silent workings of nature all around, if they can only have some one interested in their future usefulness to draw their attention to things continually occurring: and how the young mind will drink in instruction by observation. We can teach our children the great and glorious principle of immortality, by pointing their attention to the changes taking place under their own power to see; such as seed-time, how they will watch its coming forth; after a time it begins to mature, and another change in its form is presented for observation; when perfected, there is again the germ. Then teach them of the germ of an eternal existence within them. Show them that as they see all things progress upward or towards perfection, so it is with man. That notwithstanding the outer form must pass through various changes, there is an immortal spirit within which is the reality of our existence here. How the young mind will expand and go out in search of further knowledge of its own eternal existence. O, blessed country-home, in the midst of useful employment for old and young, for the head, hands, and heart, how much of happiness it affords; though deprived of many social privileges, still I love thee, for thy many blessings. How the orchard too is watched; peaches, apples and pears, from the blossom to the peeping forth of the little fruit; all is noticed, and is subject matter for the young as the old. What promised happiness is in the heart, and need I say this begets in us a spirit of thankfulness to the giver of every good gift. Point a child to a tree laden with precious fruit; teach him of the good fruits, or works, that man is capable of producing, that will confer happiness upon his fellowman; teach the young child thus to reason from cause to effect, that as surely as we know a tree by the fruit it produces, as surely are we known by the fruit we produce in our lives. And as certainly do they straitway make pure resolves; from their infant minds are evolved high and holy thoughts of future usefulness. O, ye gifted ones, who are able, teach the young in this school of nature; the lessons are much easier impressed upon the mind, than book learning. Let the joyousness of virtuous childhood pass in physical development under such home instruction as this; and I think we as parents need not fear for the future research of such minds as our children will possess. To make our home instruction more perfect, if we have neighbors, teach children, whenever opportunity occurs, to render them any little service or favor they are capable of; thus will they begin to have ideas of reciprocation. When there is anything of importance to be done, let them help, or at any rate think they do, even if they are a little hindrance; this is another great principle, that of co-operation. You or I cannot fail in this way of implanting in the young, true principles, of a universal application. I chose this subject, not because I am capable of teaching, but that others more gifted or more experienced may bring forth more perfectly matured instruction. A knowledge of things as they really exist, is true knowledge. At home there is ample opportunity for allowing the young the privilege of following their truest and most interior attractions; we thereby gain the satisfaction of learning much of the Spirit Being within, by its own manifestations in obeying its attractions; we soon learn what will influence them most.

Children naturally withdraw from things repulsive to them, and to force them towards a course of conduct, person or things repulsive to them, is withering in its effect. They would, if let alone, follow alone that to which they were attracted and contributed to their happiness, and also the happiness of others. It appears to me that children are often too much restricted, where they should be instructed, or guided, and the mind is thereby made to rebel against what to them is oppressive. They are too often taught for manners, or something else, to act and speak otherwise than they really feel, hence they acquire something unnatural. I think we are too often found dictating to our children, and I have seen them required to say yes, where they had the strongest inclination to say no; and where no was the truthful answer of the little fellow. A child does not look you full in the face with confidence beaming in his bright eye, when he says yes, because he does so in obeying one who controls him, as he would had he answered his own truthful reply. Some might think a child should be taught in what manner to reply. Yes, it should, but let the answer be spontaneous, for then is it truthful; though it crosses our feelings or that of others. If yes, where you desired no, then ask the why and wherefore, thus we get at the reason for the answer, and we need not be surprised if in doing this we should find our children greater reasoners than we supposed, and that they have moral courage to reply according to the light in them, which is truth, if it is only glimmering.

At home, alone, can children be allowed to act out their own individual existence. Let no one think strange if I prefer the quietude of this old Oak Grove, to a life in the city where there is much to fear for the young and inexperienced. Children here *are free*, to be and do as natural inclination prompts, and then taught the right or wrong of all they may chance to do. Childhood is a brief period of our existence, but there is more accomplished in that brief period than many dream of. How often do I hear one saying, "he (or she) is a child—they will soon forget." But in the mind there is, in this brief period, being laid the foundation for future usefulness, for future greatness, in the world. No matter on what a miniature scale his childlike ideas are; as his individual existence expands, his ideas expand also, until the man stands in his mighty influence. Whether for the welfare of mankind or otherwise, home was the cradle of all he ever is; the images impressed upon his mind there, the ideas which were so dimly or faintly reflected then, have now shone forth in matured splendor, to bless mankind by his inventive ingenuity or active benevolence. And if it it can be be known, perhaps the first dawning of the idea that has resulted in some great enterprise, was when chasing a butterfly or overturning a mole-hill; but if children are cramped where they cannot be allowed free exercise in the open air, without fear of danger, they lose much of their ambition.

Again I say, blessed home in the country, surrounded by the growing harvest that supplies our wants; fruits so grateful to the palate of old and young, but more especially the young; where so much of nature is manifest in every direction the eye turns, that our children are constantly desiring to be taught of this or that, and show promise in their innocent curiosity of the growing intelligence of the mind. And here the heart-utterances that are constantly occurring are cherished in the inner soul, a nucleus for a new group of affections, that finally become the great cable of purpose to action. Ciries are, to the young mind, too filled with the unreal and the selfish in pursuit of the world's success. Give me a home in quietude, where heart-utterances come forth full and free; where our better qualities are not cramped or cribbed by outside pressure or cold informality for appearance.

And now, friend Farmer, have I given utterance to the heart-feelings or thoughts of a mother in what I write. I am satisfied that they will not not be lost in our world; and that they may benefit and bless, is the sincere desire of your correspondent, who does not utter her thoughts to teach, but to help some who may take less time to think on this subject—the best place to rear children for a life of sincere usefulness and purity. N. B. H.

To our Friends and Donors.—We have received from our honorable Senators and Representatives, sundry valuable books, seeds, and Congressional papers. To Messrs. Broderick, Gwin, McKibben, Scott, and other members of Congress, we are grateful for favors.

To the President of the Michigan State Agricultural Society we are much indebted for valuable documents. We ask the kind coöperation of all State and county institutions of agriculture and mechanic arts, in the exchange of documents. We will reciprocate.

Our Worthy Typo on the Sea.—We are happy to receive a letter from one who was long in our office as an honored typo—Mr. John S. Shanks—dated Panama, April 5th, and we were happy to know of his comfortable trip thus far, though in feeble health. God speed him safe onward.

Agriculture in France.—The Emperor Napoleon is exerting himself to introduce into France all the agricultural improvements which have of late years been adopted in England, such as steam-plows, reaping machines, etc. His Majesty is also indefatigable in his efforts to improve the breed of French cattle. He has purchased several of the best specimens of stock exhibited at our cattle shows, including the celebrated Durham bull, Master Butterfly, whose progeny, it is to be hoped, will make French beef something different from the lean, stringy viand the Paris butchers ruin the stomachs of their customers with at present.

Dan Dean.

"Blighted hopes are round us lying,
Like flower leaves scattered by the storm."

TEARS are the most fitting expression of the feelings of every true and generous heart, when they read of the sad fall of one like Dan. However great may be our horror of crime, however strongly we may be called upon to condemn the man who, forgetting a trust reposed in him, robs the confiding, and *forfeits* by his acts the confidence of all that once gave him esteem and unlimited trust, there are other feelings that should be awakened in our breasts, feelings of deep sympathy not only for the erring, but for those that may be connected with them, upon whom the disgrace will fall with a darker shade, and in whose hearts shall be inflicted a deeper pang than that suffered by him who is the guilty one; we mean the mother, or wife, a sister, or kindred of the erring one. There are also other duties and obligations resting upon every good citizen in a case like the present one; reports speak the *cause* of this young man's fall to have originated at the *gaming table*. This being the fact, every man that gives his countenance to this iniquitous practice, becomes *particeps criminis* to his fall.

Were we to record the names of the young men of California who have fallen at the "gambler's table," were we to add the names of those of mature years, should we call the names of men who now spend hours and nights at that murderous game called "poker," we believe our community would be startled into a sense of duty they owe themselves, to raise a voice to prevent men high in office, men of business and men in responsible stations, from being the example and the cause of alluring young men to the path that leads to sure destruction. We ask, in all solemn earnestness, is Dan Dean the only young man that has fallen by playing "poker" between Sacramento and San Francisco? There have been other young men connected with Express Companies, in times past, that have fallen, as will be well remembered; and so long as this temptation is allowed, especially where there is weakness, just so long will there be danger of others falling.

Could the walls of the state-rooms of these floating palaces speak, could the names of those guilty of gambling be written, as the hand writing appeared of old, what a long list would appear to startle one with horror! The past history of this same crime is marked in blood, and from our own knowledge of those who have already fallen, from our knowledge of those who are still environed with danger, we dare not be silent. From this same young man whose fate we now deplore, we have received acts of kindly courtesy, and while we remember these and mourn his fall, we will raise our humble voice to stay the calamity that is brooding over many who are standing upon the brink of ruin. We have more to say at an early day upon the same theme.

Little Trees.

THE following gems, radiant with beautiful thought, we clip from the California Express, Marysville, and we wonder why they should pass a *Ridge* ever prominent for gleams of brightness, and not have been chased by a rainbow at least. How much happier must those who wield the editorial pen feel, after they have given way to thoughts like those of our brethren of Shasta and Downieville, than if they had been inditing political squibs, or recording murders, suicides, and divorces. Yes, brothers, *plant trees!* plant *little* trees, and the dews of Heaven will water and nourish them, the morning larks shall wake you with their song, the linnet and the nightingale shall woo you to rest, as the god of day declines in his course,

"And the night shall be filled with music,
And the cares, that infest the day,
Shall fold their tents, like the Arabs,
And as silently flee away."

Under the Shadows of My Little Trees.—We have planted some little trees. We expect to see birds build nests in their spreading branches, and it may be that they will finally cast mottled shadows on our grave.—[Shasta Republican.

Thus beautifully said the editor of the Shasta Republican, and thus beautifully comments the Sierra Citizen:

While planting the little trees, you were engaged in the decorative art, and your report on the completion of the work is a beautiful piece of poetry. It is ballad and hymn, elegy and prayer. But do not go until you have seen your little trees arrayed in the diamonds of many winters, and decked with the green and yellow of many summers. Wait until generations of birds have flown from their nests in the spreading branches; and, worthy workman, when you die, may those mottled shadows rest as softly on your mansion roof, on the palace of your dust, as starlight on the sea!

HOLLOWAY'S OINTMENT is the household remedy of all nations, for burns, scalds, cuts, bruises, sprains, sores, contracted sinews, eruptions, tumors, cancers, rheumatism, and all external pain and inflammation, whether produced by accident, disease, or maltreatment. Warm fomentations should precede its use.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot.

SICK HEADACHE AND DEBILITY.—Among the numerous advertised medicines for these complaints, none can be found so efficacious as the Oxygenated Bitters. They produce the most agreeable and invigorating effects.

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN
AND
NURSERY,

On the American River, 2¾ miles from the Steamboat Levee,
SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of
GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE, embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being CORRECT AS TO NAMES AND VARIETIES, are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of
Shade and Ornamental Trees,
We have a very fine stock of all the leading varieties, some very fine extra large trees of the
ELMS, LABURNUMS AND LOCUST,
particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.
A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of
CAMELLIAS
is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,
Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

Vance's Branch.—New Gallery.

AMBROTYPES, PHOTOGRAPHS,
Daguerreotypes and Melainotypes.
VANCE & CO.,
Corner of Third and J streets,
(Hiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerrootypes** and **Photographs,** as heretofore, in a manner
UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. L. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee
PERFECT LIKENESSES
to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all to *Call and See our Rooms and Specimens,* whether in want of pictures or not. VANCE & CO.,
9-3m Sacramento.

Copartnership Notice.

BOOKS, &c.

Text-Books upon the Sciences,

FOR SCHOOLS AND COLLEGES.

PUBLISHED BY A. S. BARNES & CO., 51 and 53 John street, New York. Teachers are invited to examine the following Text-Books upon the Sciences:

I. NATURAL PHILOSOPHY.

Parker's Juvenile Philosophy, Part I.	$0 25
Parker's Juvenile Philosophy, or First Lessons, II.	0 40
Parker's School Compendium of Natural Philosophy,	1 00
Norton's First Book in Philosophy and Astronomy,	0 50
Bartlett's Elements of Mechanics, 8vo.	3 00
Bartlett's Analytical Mechanics, 8vo.	4 00
Bartlett's Optics and Acoustics, 8vo.	2 00
Bartlett's Spherical Geometry, 8vo.	3 00
Lardner on the Steam-Engine, 8vo.	1 50
McIntyre's Astronomy, and Study of the Globes,	0 75
Chambers' Natural Philosophy, 12mo.	0 75
Gillespie on Roads and Railroads, 8vo.	1 50

II. CHEMISTRY.

Porter's First Book of Chemistry, 16mo.	$0 50
Porter's Principles of Chemistry, 12mo.	1 00
Gregory's Organic Chemistry, 8vo.	1 50
Gregory's Inorganic Chemistry, 8vo.	1 50
Reid & Bain's Chemistry and Electricity, 12mo.	0 75

III. GEOLOGY.

Page's Elements of Geology, 12mo.	$0 75

IV. NATURAL HISTORY.

Chambers' Elements of Zoology, 12mo.	$1 00

V. BOTANY.

Theodore Thinker's First Lessons in Botany, 18mo.	$0 30
Darby's Botany on the Southern States, 8vo.	1 50

VI. PHYSIOLOGY.

Hamilton's Animal and Vegetable Chemistry, 12mo.	75

VII. COMMON OBJECTS.

Chambers' Introduction to the Sciences, 12mo.	$0 30
Chambers' Treasury of Knowledge, 12mo.	0 75
Chambers' Elements of Drawing, 12mo.	0 60

The Publishers would ask Teachers to examine these works for themselves. Numerous favorable notices from distinguished sources have been received, and might here be appended, but are omitted, with the exception of one letter respecting Parker's Philosophy, and one respecting Porter's Chemistry, referring the reader to A. S. Barnes & Co.'s "Descriptive Catalogue," for any further information respecting the character and merits of any of the works mentioned, and of their publications generally.

Just published—Root's New Work on School Amusements; or, How to make the School Interesting, $1 25.
A. S. BARNES & CO.,
v9 51 and 53 John street, New York.

Loudon's Encyclopedia
OF TREES AND SHRUBS,
BEING THE
Arboretum et Fruticetum Britannicum
abridged,
With engravings of nearly all the species.
Adapted for the use of Nurserymen, Gardeners and Foresters.
By J. C. LOUDON, F.L.S. H.S. &c.,
Conductor of the Gardener's Magazine, &c.

One copy of the above valuable work just received and for sale at the California Farmer office. 10

Loudon's Encyclopedia of Plants.

COMPRISING the specific character, description, culture, history, application in the arts, and every other desirable particular respecting all the Plants indigenous to, cultivated in, or introduced into Great Britain. New edition, corrected to the present time. With 3000 Engravings. By MRS. LOUDON. One copy received and for sale at the Farmer office. 12

The California Farmer.

SAN FRANCISCO, FRIDAY, MAY 7, 1858.

The Flour Speculation.

"Their scepters broken and their swords in rust."

"It is not victory to win the field,
Unless we make our enemies to yield
More to our justice than our face; and so
As well instruct as overcome our foe."

The agony is over! the bubble has burst! castles have fallen, and hope hath fled. The very condition of things which we have all along foretold, is now a matter of fact. The *speculation in breadstuffs* has forced into our market a large stock from abroad, in the precise manner which we so often stated to our readers would be the result of the unprincipled maneoverings of men who are reckless of consequences to themselves or the State. Blinded by avarice, or fearing bankruptcy, they resort to schemes, that if successful, might save them; and if not successful they would be only deferring the fate which was sure ere long to overtake them. Such men are but gamblers, in a different sense from those who stake money upon the gaming tables. They play *cards* too, but their cards are not made of *pasteboard*; their cards are *men*, and when they can find the weak, the confiding, or the vacillating mind, they call them *trump cards*; and if they cannot win at the first game, they *deal over again*, and the dealer, he turns up, a knave.

With the present condition of the flour and grain market, the want of confidence among the regular and straight-forward merchants, the fear of those who would be purchasers, the anxiety of those whose salvation depends upon selling, and the self-reproach of those farmers who may have been misled and duped, we venture the assertion, that there is more mental suffering experienced than all the flour in California is worth; and all this is to be laid to the doors of those who have been making statements that were not founded in truth, as the facts now reveal.

We have endeavored from the first beginning of this false movement, to make such statements as should be found *to stand*; and having the means at our command to give facts, we would now make a few brief extracts from the past numbers of the FARMER, and with these appeal to all concerned, and ask what journal was correct?

In the FARMER of January we say: "We have always objected to the farmers becoming *speculators*, or holding on to their wheat for *too high prices*. This will operate against them at the next harvest, as they will surely see. Their *gain* now may be a heavier loss then."

Our journal of February 12th says: "The present week of February is the anniversary of the great speculations of the past year; but now it is but the *return of a similar loss*, which must inevitably accrue to those who have been striving to bolster up FICTITIOUS PRICES." Again, February 19, "We say, without fear of contradiction, that it is *impossible* to maintain the price of flour at its present rates. It is injurious to the farmer, to the miller, to the merchant, and to our whole State; for the tendency is and will be to bring foreign flour and grain into our State, and this consumes and carries away the capital we want at home."

In the early part of March some papers of this city reported 8000 barrels of flour as the entire amount that would come to the State from abroad. March 19th, our journal says: "Those parties that seem so well posted in the quantities of flour from New York and other ports East, will find quite a nice amount *over their figures* before harvest day." (Have the facts proved this?) With other facts we then say: "These are our views; we leave them for proof as the coming days roll on. Let those interested note well these hints."

April 2d, we said: "Every effort to keep up prices will fail." "We asserted that flour would be sold 1st April at $12. Public sales gave $12 25; not far out of the way." "We also gave the price as much less in May; still less in June, and $7 by the 1st July." Such we fully believe.

In our issue of April 23d, we said: "Not until recently have the darkest shades appeared;" "the recent frauds all go to show that the speculating mania leads to ruin, and that *ruin must come* sooner or later."

We now appeal to all our readers, and ask them what paper has been consistent? what paper has been right? The recent sale of Gallego at $12 25 to $13 50 must show how slippery is this speculation. Flour NOW is far above its legitimate value, and those that hold know it, and would be glad to get rid of it. Those who have to raise money on it, or to pay heavy interest for loans, deserve pity and sympathy. "As they have sown, so must they reap."

QUICK TO PERFECTION.—A friend at Alameda told us of some experiments he had made in grafting the Peach trees. He had grafted in February last, and the trees had made eighteen inches growth in three months from the insertion of the graft upon the roots. He also informed us of his success attending the growth of the Pear while in fruit, by placing a pail of water under the branch, and thus by its evaporation creating a humid atmosphere and swelling the Pear to maturity. Cultivators of fruit should bear in mind the necessity of a moist atmosphere to swell and perfect fruit. How many of our fruit-growers are in the dark upon this subject, the true way of preparing the atmosphere for ripening fruit. See Strawberries.

NEWSPAPER CARRIERS' ASSOCIATION.—We have a Circular from this Association, and we shall be glad to see them sustained and prospered. We will aid and cheer them on to the extent of our ability. A worthy carrier deserves especial notice and encouragement.

Flowers Everywhere.

One of the most gratifying sights that meets our vision in our travels over the State, is the abundance of beautiful pot plants that are so profusely scattered far and wide. When we recall past years, the difficulties under which the cultivator labored to bring successfully forward his pot plants, the cost of labor, the cost of the pots, the wrong conception of the climate, and the care necessary to propogate them; as we recall the really great and wonderful prices which plants brought in former years, and contrast it with their present prices, it seems strange. In 1853–4 the rose geranium and the new and superb roses brought from $15 to $25 per plant; and now the same plants are scattered in every city in the State for from 50 cents to $1 50.

Who could have realized the results of the business then—the sale of pot plants. As we are a constant traveler, we have noticed that scarcely a steamer goes up the Sacramento, Feather, or Yuba rivers, that does not carry from 150 to 300 pot plants; and it is the same on the San Joaquin. At Sacramento, Marysville, Oroville, across at Grass Valley, Rough and Ready, and Nevada; at Auburn, Placerville, Stockton, and Mariposa; wherever there is a steamer to carry or an express wagon to convey them, there will be found the agents or proprietors of our best gardens, holding their public sales. There you will see plants of the rarest kinds from the Golden Gate Nursery, from Sonntag's, from O'Donnell's at the Mission Gardens, and from Prevost's and other French florists, or from Smith's celebrated gardens at Sacramento. And all along the public highways in the country, loads of these fragrant offerings are found going out to find lovers and purchasers. These are the glorious heralds of a better condition of society. These *flowers* are to us the *insurance agents* of permanency of homes, of beautified homes. These all bespeak a higher tone of society. These tell us that gold is now being made the means of happiness, not the end. Oh! there are delightful thoughts that will ever flow forth, as we see our highways of travel illuminated by these messengers of good.

When we hear the florist complaining that plants bring nothing, that they *don't pay* for raising, we think they must forget that these now furnished at so low rates are all sent out as *advertisements of the beautiful;* that they will not only *create* a love of flowers, but they will create such a *demand* that the legitimate florist, the man or men who understand their business and belong to it, will, in the end, receive a handsome reward. We should very much regret to see any check given to this wide scattering of these rich gifts. We would have every home abound with them, and every pathway made bright with them; for we feel assured, where a love of their cultivation exists, where these gems of earth are appreciated, there will contentment and happiness be found. Scatter them, widely scatter them; let every one possess them; fill your doorways with them; train them around your door-posts; let their beautiful buds and blossoms greet you in every window, and in all your walks; make them free-will offerings to your friends. There is no gift that speaks in tones of greater power and worth than the beautiful plants that can now be had for a mere trifle; and now is the time, now the opportunity for those that love their friends to make them happy.

THE GOLD EXCITEMENT IN THE NORTHWEST. The news from the new gold diggings struck upon our community, some weeks since, like an electric shock, awaking hundreds from idleness, danger, and despair, and, quick as the word gold! came, just as quick was heard the words, going! going! gone! and the late steamer brought news that the first reports were true, and more than true, for many persons came down who were men of trust, and, what was more, if you asked them if it was true, they said, "true? yes, *we've got it!*" And the gold has really been found, and brought to this city, and, from all that we learn, there can be no doubt of it. The result is already felt, and favorably so, in an increased business now opening with that section of country, and the sending large quantities of goods there. This new trade will also take off a *few thousand* barrels flour, that can be very well spared, and much other stock that can be sold profitably there.

There is still another, and the best, feature that shows itself by this discovery: there are hundreds of men out of employment, and have been so until they have become almost discouraged, into whom this discovery has infused new hope, and new life, and will call out hidden energies in them. It is just what they need. Hard travel, exposure, constant excitement, and hopeful labor will be the saving of them. Besides this, it is universally admitted, we have a certain class of population among us, whom we can very well spare, who will go, and whose places will be better filled by the new class who will come rushing to our shores as soon as they get this news—the same as they did in '49, though not in such numbers. With such views, we must feel that this new gold discovery will work great good for California.

SHASTA.—Daily staging between this place and Weaverville, says the Republican, will commence on or before the first day of May next. The stock for the road is already on the way up. Mr. W. S. Louden, of Grass Valley, Trinity river, is the enterprising manager of this line. The stages of Messrs. Long & Kenyon have been running for the past week from this place to the crossing of Pitt river. They go out, daily full of Yreka passengers.

WHO WANTS A HOME?—We again call the attention of our readers to the beautiful residence, in a neighboring city, which is advertised in our special column, and for which a housekeeper is wanted. Knowing the residence well, and the parties who wish to lease it, we know it is one of the best and prettiest spots in the State, and a rare chance indeed. Where's the widow who wants a home?

A Ramble About Marysville.

THE week before the last we spent a few days in Marysville, as will be seen by our notes of matters there. In that visit we had the pleasure of the company of our cotemporary and friend, H. M. Whitney, Esq., Editor of the Commercial Advertiser, at Honolulu, and it afforded us much gratification to be with him in Sacramento and at Marysville, to present to his view those points of interest which tend to develop the vast resources of our State. Confident that our friend would do ample justice to our State, we were very desirous he should see Sacramento, and Marysville, and a portion of the mines, and thus be enabled, from personal observation, to corroborate, among his readers, what has doubtless appeared to them as almost fabulous stories of our products in agriculture, horticulture, and mineral wealth.

In our rambles about Marysville we noticed the great improvement in the gardens. The splendid gardens and grounds of J. C. Fall, Esq., President of the State Ag. Society, have most rapidly advanced in beauty, the growth of trees, shrubs, and plants adding so much to the *tout ensemble* of the place. Many new walks and picturesque designs have been made, the past season, and the present healthy appearance of the plants reflects great credit upon the gardener, Mr. Charles Kiernan, who has been a faithful worker, for a long time, there. Mr. Fall is introducing water pipes for the wants of the gardens. These gardens, grounds, and the fine mansion, are all in excellent keeping, forming a fine picture in the scenery.

The gardens and residences of G. N. Sweezey, Esq., C. M. Lindley, Esq., Rev. Mr. Walsworth, Capt. Wells, and many others, on whom we made a hasty call, show rapid improvement. A considerable quantity of fruit will be raised in the city, and the roses are abundant, scattering their fragrance everywhere.

We could not but notice how a pretty garden gives to the possessor an increased taste of the beautiful, and an increased love of home, and home comforts. A garden claims a little care every day, and thus an hour or two daily, at home, in the garden, twines a new and a stronger link around the heart and affections, and increases the happiness of all. Plant gardens, then, all you that have homes. Twine the rose and the jasmine around your doorposts, and you shall find an odor arising around your pathway, increasing in strength and sweetness the nearer you approach your own home.

Marysville Making Ready.

WE made a hasty visit to this city at the "head of navigation," the last week, and we confess we felt a real pleasure in finding so much interest manifested for the coming State Fair, at this early days. Meetings are held by the Executive Committee, and the new building, mentioned last week, will soon be under way. Almost every merchant is doing something; manufacturers are at work; Mr. Mayer is building an organ; Mr. Miller, a windmill; and the steam-wagon will be surely ready. The citizens are enlarging their dwellings, and preparing them so that a generous hospitality shall await their friends; hotel keepers are brushing up their thoughts for what will be wanting. Gardens and grounds will be made to show a marked progress.

Business is good at Marysville; teams are loading; mechanics are at work; the bankers have plenty of gold, and all the people are hopeful. We noticed, too, the ice-house of the Sitka Ice Co., with about 100 tons ice. So friends can be sure, when summer comes at Marysville, they can always be kept cool.

Then remember, friends, the Grand State Fair, in August, and prepare to be there, and, be assured, there will be nothing wanting for your enjoyment, for the Executive Committee, and the citizens, will leave nothing undone.

SATHER & CHURCH, BANKERS.—On Thursday last, this banking house opened their doors again for business, placed the piles of gold upon their counter, and waited the result of their high-minded and most honorable efforts, which have been so signally successful in resumption of full payments of all their liabilities, principal and interest. This is the first and only instance, we think, on the Pacific coast, of a banking house suspending payment, and then resuming and paying their liabilities in full; and it is most honorable to all concerned; and if it should have left them with but a single dollar to commence again, they should receive the approbation, confidence, and business of the high-minded and honorable in the community. It is, alas, too true, that those who struggle on for years to pay their debts to the last farthing, have but little sympathy, because they are poor; while the rich bankrupt, who fails and pays a bit on the dollar, and saves a fortune, receives the congratulations and smiles of a host of friends. But the house of Sather & Church have again resumed, and they will be welcomed and supported most undoubtedly. One most gratifying feature will strike all who visit the bank—the familiar faces of those men who were formerly the clerks and aids in the several departments; the same faces greet the customers of the bank. This is as it should be. It is an honorable testimony of the worth of the clerk, and the approbation and sense of justice of their employers. From the appearance of even the first day, it seemed as if the business was going on in the usual form, as if nothing had happened; and so may it go on, prospering and to prosper, until those who have set so honorable an example shall reap a rich reward for their labor.

BIG SPRING.—Away up in the Pitt river country, says the Placerville Index, there is a spring of fresh water which measures sixty feet in length by thirty feet in width, from which flows a small river, with sufficient force to drive the most ponderous machinery in the world.

Strawberries—How to Water Them.

THE growing of this delicious fruit successfully is a triumph in this hot and dry climate, and at the present time but few growers have given that study to them they need. We notice that on some of the plantations a crop is kept continuous upon the vines, *i. e.* the vines are made to bear perpetually, and this can be done almost everywhere, if the grower will but make due exertion to give the vines and fruit one *necessary article of food* just at the right time, and this is an article of drink—(there's a bull for you). As the berries are swelling, they claim all the moisture they can get; they do not need an abundance of water, neither do they want it poured like a river upon the surface of the ground. There is a much better way. Our plan is to create a *humid atmosphere* in a hot day. Every cultivator of strawberries at the East can remember that when we have had our *sunshowers*, then a smart rain, and then sunshine, how quick the fruit would ripen; how quick the berries would plump up and turn red, and how sweet they would be. The briefer the shower and the quicker and hotter the sun came out, the quicker the berries would ripen. Now this was nature's own plan, and it was the right one.

Now if strawberries growers here want large, rich, luscious red berries, they must imitate nature; and to do this, large fountains must be laid in our gardens, and strong hose and good force-pumps used—Paxson's continuous acting pumps are the very thing—and then as the strawberries begin to change use the force pump and send up *powerful streams* into the air, and let them break and fall upon the vines and the berries in the *middle* of the day; remember and send the stream up high, so that it shall break into a mist-like shower and fall back upon the fruit and vines. If any one will try this plan and see the result, we have no doubt it will become universal, for this is the *nearest* to nature we can come. If the earth has been properly cultivated, all the greater portion of the water will be absorbed by the warm earth, while the fine dew will be drank in by the leaves and the fruit; and if any one will take the trouble to mark or measure any given number of green or half-ripe berries, they will see a wonderful change in a few hours among the fruit. This plan should be put in practice about 10 or 11 o'clock, AM. We shall speak further on this subject in our next, for it is an important one.

THE ALLEGHANIANS' CONCERT.—This band of singers, known so well and so favorably in 1852 in California, have said, "we come again to greet you." With their charming voices and sweet songs they made their *debut* on Wednesday evening, at Musical Hall. Of the audience it can with propriety be said, if it was not a great house in numbers, it was an appreciating one; and the Alleghanians were received with an earnest welcome. When it is remembered that this troupe have just arrived, and not in good health, great credit will be given for the excellence of their singing, several of their songs being most admirably sung. "Rocked in the cradle of the deep" showed the power and compass of their voices; it was most sweetly sung. "Give me back my mountain home," and "Where shall the soul find rest," gave great satisfaction. The Grand Fantasia upon the new instrument won great applause; and although the instrument is not wholly *new*, it was new to most present, and the piece was most admirably executed, and won a prompt encore, the instrument being simply pieces of wood laid upon rolls of straw. The song by Miss Hiffert, "Oh charming May," was indeed beautifully given, the lady's voice being full and clear, yet soft, bird-like, very rich, and of much compass. We could not but feel that after *that* song the sweep's song should have been given; it broke the charm of May. The opening piece, "Greeting to old friends," was very appropriate for the occasion, as it will be remembered that since their last visit, death has called away Jesse Hutchinson, one of the band, and also the lovely, amiable and universally esteemed Miss Goodenow, afterwards Mrs. Robb. Her many virtues and spotless character will keep her memory ever fresh and green. The opening words of the song—

"Should we blend in our song a saddened strain,
What heart may echo it back again"—

recalled those who had "passed away." We sincerely trust this most excellent band will be completely successful.

MRS. E. S. CONNOR gave the first reading of her original Shakspearean Miscellany, at Musical Hall, in this city, on Thursday evening last. We regret that the attendance was rather limited; but those who were absent missed a rich, intellectual treat. The entertainment was very satisfactory, and the lady gave evidence of the possession of decided talent as a writer, as well as an accomplished reader. We are confident these readings will increase in popularity, and hope the lady will be greeted with full houses during her tour, as, not only will her audience be well paid for attendance; but they will also have the satisfaction of having assisted in a very worthy object, the purchase of the Tomb and Homestead of Washington. We hope Mrs. C. may be induced to give a repetition of her Miscellany, soon, in our city.

REMEMBER YOUR BUSINESS! Advertise it! If you would secure a large and permanent trade, *advertise it!* and in the choice of your *mediums*, select those papers that can give the *widest circulation* to that business. The great cause of success of Holloway's pills, Sands & Co.'s sarsaparilla, the famed Graffenberg pills, and hundreds of others, was secured to them by advertising widely over States, Territories, and Kingdoms. Are you a business man—advertise liberally.

FAMILY GROCERIES.—Remember Messrs. Fordham, Jennings & Co. Don't forget A. L. Edwards & Co. Be sure to visit Bradshaw & Co.

Money by Mail Safe.

WE desire to speak a word in favor of the plan of sending *money by mail*. Having received for a long time a generous contribution for our paper, from subscribers, and having advertised for our friends to send money by mail, we have had full opportunity to ascertain the amount of labor performed and the safety of this plan of conveyance, directly from those engaged in it. We can thus report from reliable data.

The regular clerk of the San Francisco Post Office furnished us with a statement of the labor performed, and we were surprised at the amount, and the success which has ever attended the plan.

Every "registered letter" has to be handled *seven times*, and seven times registered, and all for five cents. We learn also, that of *fourteen thousand* letters registered and forwarded the past year, *not one* has miscarried or been lost.

Another fact connected with our post office we learned, and it speaks well. Mr. Clark, so well known as the mail carrier, who has been intrusted with the carrying of all the mail bags, has now had charge of this duty five years, and, as we learn from the Assistant Postmaster, has always been at his post, and never miscarried a mail; although called often to perform the duty assigned, yet we learn he has never failed to be on his post to a minute, and always faithfully delivered his charge. These faithful services it seems are properly appreciated, and we learn that Mr. Clark has been awarded the contract of carrying the mail for four years more, by the Postmaster and river and bay steamer lines.

GARMENTS FOR THE SEASON.—Messrs. Houston, Hastings & Co., dealers in Clothing and all furnishing articles for a gentleman's wardrobe, have opened the large warehouse in Sacramento, formerly Keyes & Co., corner of J and Second streets, where they intend to offer the very best stock to be found in that city. Messrs. H., H. & Co. also continue their large establishment at Marysville, where as before they mean to be A No. 1. Having the very best facilities for importing and manufacturing their goods, their customers can rely upon being suited. As the Great Fair is to be held at Marysville this season, this house will be prepared with all the needed garments, to prevent the necessity of visitors at the Fair lugging a large wardrobe up river, as they intend to sell so very reasonable as almost to tempt people to come to the Fair to save the price in garments they need for warm weather.

Messrs. H., H. & Co. are now opening at both cities, a very large stock of new goods, worthy especial notice, the particulars of which are named in another column.

REVIVAL IN SAN FRANCISCO.—A most interesting revival in religion is now witnessed in our city. Meetings are held in the Pine street church, at which pastors and people of different creeds all unite. The same state of things exist in Sacramento. These are the precursors to a great revival on our coast.

A Voice from the Steerage of the John L. Stephens.

The annexed letter, received by last steamer, we present to our readers to show the true condition of the conduct of the officers and men of our Pacific steamers, and the way the passengers fare and how they conduct. The letter was written by a gentleman who feels wholly unbiased; who is well known to this community, and who promised to write us of the matters on board truthfully.

That there are evils suffered among so many on shipboard none can doubt; but that those who control desire to do their duty in the main must be admitted. That the prices of passage are exorbitant and injurious to the community, all can see; but the best way to remedy these evils will be to act justly and state things fairly. The letter presents Capt. Lapidge and his officers in a most honorable light, and we hope that all statements of grievances or courtesies will always be made in a just manner.

The unjust position of the laboring classes—those whose toil and sweat have been the means of making California what she now is—has been most forcibly presented, and we trust it will awaken the *true working men* to such action as will make them *respect themselves*. Why should the mechanic and the workingman always be packed off in second and third-class passages on railroads and steamers? What said Senator Broderick in his speech in the U. S. Senate on the Kansas question, when speaking of labor and the mechanic: "*They submit too tamely to oppression*;" yet "they will control the destinies of this nation." But to the letter:

Acapulco, April 12, 1858.

Messrs. Editors: We left the wharf at San Francisco at 10 o'clock A. M. on the 5th. After waiting in the stream abreast of the city for about an hour, two unfortunate wights, "stowaways," were found, and were summarily and not softly sent ashore. The voyage so far has been almost unruffled with an incident. We were under sail and sweeping before a leading wind from the 5th to the 10th, averaging, between wind and steam, about 260 miles per day. The number of passengers is not known by us, but is supposed to be 600 in the steerage and 350 aft. The ship is decidedly one of the best ordered that a person could sail in. Capt. Lapidge combines with the seaman the bearing and qualities of a perfect gentleman; and he seems to have impressed every one of his subordinates with his peculiar qualities. Every one belonging to the vessel, from the smallest boy upwards, seemed to be studiously civil and obliging to the passengers.

Quite a number of women and small children are in the steerage. The women get along very well. A special table is set for their accommodation, and the men are universally respectful and obliging to them. As for the children—those who are five and upwards—they are the most privileged class; rejoicing in their strength and exuberance of feeling. The ship to them is a race course, a play-ground, or anything else to which they may wish for their sports to devote it. Sea-sickness, a confined steerage, or poor "grub," never discommodes them. Several are in the steerage with infants, and though the little "shavers" stand it well "considering," still they would do better if they were in the second cabin. The steerage is full of inconveniences, and has none of the accommodations that delicate children require. The sanitary regulations of the vessel are admirable. From 9 to 11 of each forenoon is occupied by the crew in cleaning the steerage; and it is kept as thoroughly neat and clean as water and scrubbing-brush can make it. At 11 A. M., daily, the captain and mates inspect the steerage.

You will naturally ask how the "forward cabin" fares in the matter of "grub." The P. M. S. Company agree to furnish "such ilk" with ship's rations; that is, with salt beef, salt pork, beans, coffee, tea, potatoes and hard bread. In this particular they do, as far as I can judge, live up to their agreement tolerably well; for though neither the tea or coffee would be mistrusted of being tea or coffee ashore, still the fare would pass for good rations in an ordinary merchantman. Yet who can avoid feelings of indignation at the idea, that the steerage classes, the working masses, the very ones and none others who dig the gold and create the wealth that has given life to this very company, and vitality to its first-class passengers, should be so completely the puppets, so thoroughly at the mercy of a grinding, heartless monopoly. The price of steerage tickets was $130 50; the fare would have answered where such tickets cost only from $50 to $75.

On the 9th instant, the steerage class, considering that they had paid about as much as second cabin tickets are worth, concluded that they were entitled to a better class of grub, such as would make them comfortable, and in a series of appropriate resolutions, requested Captain Lapidge to make the appropriate changes. The Captain's answer was a friendly and complying response, which was received with cheers. We have since had fresh beef, and a general improvement in the fare.

On Sunday, 11th instant, at 9 A. M., we entered the port of Mansanilla. Some ten Spanish gentlemen, understood to be Santa Anaists, were taken aboard, and after an hour's stay, the ship proceeded on her way to Acapulco. At 11 A. M. divine service was performed by Rev. Dr. Scott. We arrived here at (say) 12 o'clock, M. The baby census aboard numbers about 200. On the 9th, a child (aged about nine) of Mrs. Platt, formerly residing at the head of Sacramento street, San Francisco, fell through the skylight of the hurricane deck into the cabin. Its collar-bone was broken, and its head is supposed to have been injured internally; its recovery is uncertain. All are well; there is not a case of sickness on board. Yours truly, H.

The Marysville Library Association.

We spent an evening in the Library rooms of this Association, during the last week. We were really surprised as well as much pleased to find rooms so elegantly and so abundantly supplied. The rooms are situated in the second story of a fire-proof building fronting on the levee, facing the entire square, are large, and furnished with suits of shelves for the different classes of books; all in most excellent taste, and with curtains to protect them from the dust.

The number of volumes in the Library, is about 1600, all in the best style of binding, and comprising the best works upon history, biography, poetry, art and science. We saw no works of an ordinary character, nor of those works of fiction usually so abundant in all libraries. We noticed the splendid donation of J. W. McKorkle, Esq., some 150 volumes, embracing many very valuable works, Debates in Congress from early dates, Acts of Congress, American State papers, U. S. Exploring Expedition, Histories of Nations, etc. This one collection of political works, of States and the Nation, is invaluable, and we believe the Library at Marysville to be one of the best in the State. Mr. McKorkle has done himself honor and Marysville great service by his generous interest for such a cause. Would that all our public men would use the extent of their influence for such purposes.

The Library is composed of memberships of $25 each, and a monthly assessment of $1. $100 makes a Life member, without assessments. The establishment of such a Library at Marysville is highly honorable to those who have instituted it, and we trust its valuable treasures will not remain unexplored.

The Leviathan Comes.

We feel assured from the peculiar signs of the times, the new discoveries of gold at the Frazer river diggings, that these discoveries will go forward by the steamer to the East, and cause such a furor as will induce the proprietors of the "great Leviathan" to offer her to convey passengers to Panama, whence English iron steamers will carry them to San Francisco. This we verily believe will be the grand result of the new diggings.

The present exodus *from* our city will work very favorable, for we can well spare the goods and the people that will go, for we shall have a hundred from the East for every one that leaves us; as many that go from here now are those who are now obliged to work for the *first time*, and 'tis well that necessity compels them to do so. We hope most truly they will reform, and get rich. We look forward to great immigration, and of the best character.

Wimmer's Restaurant—San Francisco.—Who does not love a well cooked dinner? The man who does not is a sinner. That our life is prolonged, and our happiness increased by a good dinner, none will deny, and that we are better fitted for all the labors and duties of life by properly gratifying a good appetite with the good things of this earth, none will deny. But it is not everything in the food and appetite, merely; there is something in the manner in which the food is set before you, and all the surroundings. Now, poor food, badly cooked, and little of it, is made palatable, if there is a dear wife and little ones; but if a man is a *bachelor* (is a bachelor a man, or only half a one?) and obliged to go to a restaurant, then he must have all those nice little condiments, and those little attentions which can, only in part make up for the loss of home.

Now, reader, we dine at "Wimmer's" and such dishes, such a variety, and such attention, would give a dyspeptic an appetite; and then so neat and clean—verily it does one good to be at a table where everything is clean and nice; and then all who visit "Wimmer's" are of the right sort; no rowdies, or noisy, half-tipsy men; there is such a respectability in this place that ladies can visit it and feel safe from annoyance. Our Sacramento friends, in their visits to the Bay City, will go to "Wimmers," for they well remember Jake at the Antelope, in their city. Well, Jake is at "Wimmer's," and John is there, too. John does bring up your dinner so admirably, that you involuntarily exclaim to your friends, "Go to Wimmer's."

Accident to the Steamer.—The steamer Golden Gate, Capt. F. R. Baby, which left this port on Wednesday, for Panama, returned yesterday morning, having broken her centre shaft when about 45 miles south of the Heads. Arrangements were immediately made by the Mail Company to get the steamer Sonora in readiness, and to transfer the passengers, mails, and treasure to that vessel. The Sonora is advertised to leave this afternoon, at 5 o'clock, punctually. The amount of treasure shipped by the Golden Gate, was $1,912,877 79, and $50,000 more were added to the list. The mail by the Sonora is said to be unusually large.

☞ **Blood Horses.**—Those who have Blood Horses that they intend to offer the present season, to improve the stock of the country should make it known through our journal, if they would reach all Stock Raisers.

San Francisco, May 6th, 1858. 17

The Rassette House.—This towering castle-like Hotel, that has loomed up above all the other buildings of our city like some great baronial residence, is now about to doff its weather-beaten appearance and pass through a pleasing metamorphose by donning bright and shining robes. As this old and familiar house has changed proprietorship, the owner is making some very substantial improvements, which will make it an ornament to that part of the city. We had learned that great changes were to be made, but we now see that the outside is being painted and masticated, and balustrades added to the windows. We see also that the inside of the house is vastly improving; a thorough renovation has been made in all the departments. Mr. and Mrs. Armstrong, formerly of the St. Nicholas, and recently of the Railroad House, have taken the Rassette, and we learn from those who have been tenants for years of that house, that the improvements are very gratifying. Mr. Armstrong is well known, as an excellent public caterer, and has a host of friends. Mrs. Armstrong by her lady-like deportment, her desire to make her guests at home, and her excellent experience, most admirably qualifies her to preside over such a hotel; and from all we can learn the Rassette is now in the full tide of success.

Agriculture at Red Bluff.—We have observed, says the Beacon, several reapers brought up on the boats already, for the incoming harvest. The crops are unusually heavy, and the farmers are beginning in time to get ready to save them. Thrashers will be the next in order. Nothing makes a steamboat man swear worse than be obliged to load and discharge heavy machinery.

Colonel Stevenson has on his ranch, over the river, twenty-five acres of broom corn, that promises to be an excellent crop.

Fast Riding.—Jack Powers, last Sunday, accomplished the extraordinary feat at the Pioneer Course, of riding 150 miles in 6 hours, 43 minutes and 31 seconds. The horses rode were California stock. The fastest mile made, was the 106th, being done in 2:15. The average time was 2:18. The bet was that Powers could accomplish the distance in eight hours.

Shepherd Dogs.—Twenty-five Australian Shepherd Dogs, recently imported by Macondray & Co., were sold at auction, at prices ranging from $25 to $27. These animals are said to be remarkable for their sagacity, herding sheep with an instinctive thoughtfulness which deserves almost to be dignified by the name of intellect.

Grain in the Mountains.—The residents of Honey Lake and Indian Valleys, expect, this season, to raise 75,000 bushels of wheat, if they are not molested by the Indians.

LINDSEY'S
Double Acting Rotary Force Pump.
THIS is a new Pump, patented in America and England in 1855; and for Cisterns, Wells, Mines, Engines, Railroads, &c., has no rival: in that it works easier at great depths, discharges water at different hights, can be used for a hose, is made entirely of wrought and cast iron, without suction or packing, simple in construction, easily put in, not likely to get out of order, will last for an age, and is cheaper than any other Pump. It has a wrought iron pipe, side gearing and balance wheels, with everything complete to raise water by hand, from one to one hundred feet; and costs, boxed and shipped, from $18 to $60.
It must stand in the water, and will not rust.
Drawings and a full description sent to all parts of the world, free of postage, by addressing the general agent.
JAMES M. EDNEY,
56 John street, New York City.
☞ Circulars to be had and orders received at the Office of the CALIFORNIA FARMER.
Circulars mailed to any address, by sending to the Editors of the Farmer. v7-23 1y eop

SPECIAL NOTICES.

☞ HOUSEKEEPER WANTED.—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.
The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.
A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings two numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing; a Vineyard loaded with promised fruit; a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).
Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.
All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14tf

☞ Wigs! Wigs!! Wigs!!! — BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.
Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.
v8-13 1y 233 Broadway, New York.

☞ A. W. FABER'S LEAD PENCILS.—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.
These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.
Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."
Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."
Extract from the Report of the Great London Exhibition, 1851:
On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Fabers's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."
Beware of Counterfeits!
The reputation of A. W. Faber's Lead Pencils has not ailed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.
Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York."
E. FABER, Sole Agent
v9-1 6m 133 William street, New York.

THE HAIR! THE HAIR!!
What Lady or Gentleman would be deprived of a beautiful head of Hair, when by the use of LYON'S KATHAIRON such an one can so easily be had? Too much value cannot be placed on a fine head of Hair—not only as an adornment to the person—and no person is well dressed without well-arranged Hair—but, also, as intimately connected with the general health of the body—for this connection is much closer than is generally supposed. The KATHAIRON preserves and beautifies the Hair, making it soft, curly, and glossy; and by its cleansing and invigorating properties, gives tone and elasticity to the whole system. Sold everywhere for 25 cents per bottle.
HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
61 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
15 1m *San Francisco, California.*

☞ Wistar's Balsam of Wild Cherry.—The following letter from Rev. Henry Wood, of Concord, N. H., editor of the Congregational Journal, speaks volumes in favor of Wistar's Balsam:
Concord, N. H., March 2.
Messrs. Seth W. Fowle & Co—Gentlemen: Two years ago, a sudden and violent attack upon my Lungs confined me to my bed for several weeks, and, when I recovered, I was so much oppressed by difficulty in breathing, that I was often unable to sleep or rest upon a bed by night. The suffering was extreme, and, judging from the inefficacy of the remedies used, I supposed the disease incurable. Being persuaded to try a bottle of Wistar's Balsam of Wild Cherry, without confidence in its efficacy, I found the difficulty almost entirely removed before one bottle was used up. Sympathy with my fellow-sufferers induces me to make this public statement, and recommend the article to others similarly afflicted.
With respect, yours truly, HENRY WOOD.
None genuine unless signed I. BUTTS on the wrapper.
Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agents—C. Morrill, cor. Third and K, sts., Sacramento; H. Johnson & Co., Washington st., San Francisco. 15-1m

☞ HAIR DYE! HAIR DYE!! HAIR DYE!!!
Batchelor's Hair Dye is the Best in the World!
GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.
Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.
WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.
Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.
Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.
☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of
WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

☞ Farm Stock.—Having completed our arrangements for the importation of choice stock, we are now prepared to receive orders for any of the following breeds, and would call the attention of those in want, to our unsurpassed facilities for the importation and improvement of the choicest stock:

	Webb Southdown Sheep.	
Thorough-bred Devon Cattle,	French Merino	do
Shorthorns do	Spanish do	do
Thorough-bred Ayrshire do	Cotswold do	do
Suffolk and Essex Pigs.	Chester White Hogs.	

Fancy Fowls—all the best varieties.
All communications addressed to us will receive immediate attention, and we shall be happy to correspond with any and all upon the subject. Address
WARREN & CO., Cal. Farmer Office.
☞ REGISTRY OF STOCK.—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.

HOTEL
INTERNATIONAL.
San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.
It was established under its present management on the 1st January, 1857, as a
FIRST-CLASS HOTEL,
in every particular. The present
Lessee and Managers,
A. S. HALEY,
JNO. J. HALEY, and E. R. ROBINSON,
with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the
FIRST RESPECTABILITY,
showing conclusively the SUPERIOR MODE in which the Hotel is conducted.
It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most
DESIRABLE STOPPING-PLACE
For Families or Single Gentlemen,
during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.
A. S. HALEY, Lessee.
Assisted by: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

SPLENDID BLOOD STOCK.
A RARE OPPORTUNITY FOR PURCHASERS OF FINE STOCK.

The undersigned, having determined to return to the Atlantic States, at an early day, proposes to offer at
PUBLIC AUCTION,
the entire lot of
FULL BLOOD STOCK,
which he has imported from the East, within the past two years, together with their progeny.
This collection was selected by himself, personally, from the very best stock-raisers in the Eastern States, and he is prepared to show the pedigrees of all the animals, so as to secure to purchasers the satisfaction of having pure stock.
This collection consists of fourteen head, as follows:
The noble Bull Calf, "SNOW BALL," by imported Bull "Bob Letcher."
"KENTUCKY BELLE," the finest heifer that could be purchased in Kentucky, and which is admitted to be unsurpassed. Sire, imported bull, "Prince Albert."
"LADY JANE," 3 year old heifer, bred and raised upon the farm of the Hon. Henry Clay. "Lady Jane" has a BULL CALF by her side, of rare promise.
☞ In addition to these I shall offer:
One two-year old BULL, two YEARLINGS, and COWS, COWS with CALVES, and other YOUNG STOCK.
This entire lot of animals was selected by the undersigned for the express purpose of improving the Stock of the State, and was driven over the Plains with care. It was the best Stock that could be procured in Kentucky. Full pedigrees will be furnished at the sale to all purchasers.
Every information needed, relative to the Stock, will be cheerfully given by the undersigned, where the Stock can be seen
The sale will take place at the
Horse Market, Sacramento,
On the 15th of MAY, at 10 o'clock, A. M.
S. W. LONG,
Puto Creek, Solano county.
P. S. Information of the Stock, its character, value, and reference, can be had at the Cal. Farmer office.

Austin's Patent Wooden Fan
WINDMILL.
THE undersigned has secured his PATENT for the NEW WINDMILL
invented by him recently, and which by every test yet made, has proved to be most completely successful.
This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.
This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.
THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.
Any person of common ability can put them up, as directions for so doing go with them.
JESSIE A. AUSTIN,
Patentee,
STOCKTON, Cal.
N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. [14] J. A. A.

Rags Wanted.
THE HIGHEST PRICE PAID IN CASH for Paper Rags at the Office of the Pioneer Paper-mill, No. 25 California street. Our friends in the country are invited to send in their Rags, and send them to us. Printers, publishers, book-binders, etc., can be supplied with extra sized Paper, at short notice.
9-16 3m TAYLOR & POST.

Ladies' Department.

A SISTER'S LOVE AND PRAYER.

The following beautiful and affectionate letter, which we have been permitted to publish, came to a gentleman in California, from his sister in one of the old States. With this came a daguerreotype of herself. Those who were permitted to view that face, could clearly see how truthful were the words which came from that sister, for they were indeed written upon her brow. Happy brother, cherish such affection; it is worth far more than all the gold of California; for here, amid the trials incident to your life you will frequently say:

"How oft, heart-sick and sore,
I've wished I were, once more,
A little child."

Brother darling! I send you my shadowy self
As a thing to be valued above other pelf;
Though it's only an image, a meaningless face,
Devoid of all beauty, expression, or grace,
Yet I pray you accept it, because, as you see,
'Tis a very good likeness of poor homely me.

Do you see how the wrinkles have come to my brow,
And the roses that once on my cheek used to glow,
How like the spring blossoms, all faded away,
Leaving naught to remind you of life's early day?
Yes! roses and dimples together have fled,
And wrinkles and furrows have come in their stead.

But though faded and dim is the light of mine eye,
Though change in each feature, your glance may espy,
Yet my heart is still beating as fondly for you,
As in days of our childhood, when troubles were few.
And I feel that your love will each blemish o'erlook,
And give this a place in some snug little nook.

And oh! brother, sometimes when you're thinking of home,
And yearning once more its loved precincts to roam,
After looking long time at our father and mother,
At Margaret, Mary, Emma, and brother,
Should your eyes, for a moment, fall kindly on me,
Oh! think of our childhood so careless and free.

How swiftly and joyously then flew the hours,
While we rambled all day in the search for wild flowers,
Or, to seek the red berry, climbed up the steep hill,
Each striving most quickly a basket to fill;
Till exhausted and weary, when home came in sight,
We hailed its appearance with heartfelt delight.

Yes! think of our childhood, but look on me now,
And forget that the shadows have come to my brow;
Forget the long years we have journeyed apart,
And think of me still as one joyous at heart;
As a sister whose love is all centered in thee,
A favored companion, oh! still let me be. SARAH.

Jan. 26, 1858.

Letter from Grace Greenwood.

PHILADELPHIA, April 22, 1857.

EDITORS FARMER: In your journal of March 5th, I find an eloquent letter from Mrs. E. W. Farnham, which contains a reference to me, to which I must take some little exception. In speaking of Miss Hosmer's statue of Beatrice Cenci, she says: "Your own correspondent, Grace Greenwood, speaking with the enthusiastic love of a generous woman's heart, had pronounced it a triumph."

This is a mistake. At the time when I wrote of Miss Hosmer, I had not seen her "Cenci," and certainly did not pronounce upon it in any way. It was not even mentioned in my letter. I have since seen it more than once, as it has lately been on exhibition in our city; yet it is not my present intention to write a criticism upon it, though I deny that my affection for the *woman* would incapacitate me for judging the work of the *artist* impartially, according to my knowledge and ideas of art.

I must say, however, that Mrs. Farnham's criticism is not, it seems to me, quite just, because not comprehensive. She judges from the standpoint of her theory in regard to the hapless Beatrice, which theory is derived mainly from Shelley's play of "*The Cenci*."

Miss Hosmer follows another theory; one founded on the picture of Guido. Everybody has seen, at least, copies of the *Beatrice Cenci* of Guido, which is the chief art-treasure of the Barberini Palace at Rome. Tradition, if not history, says that this picture, the loveliest portrait, if it be a portrait, in the world, was painted while the beautiful parricide was in prison, condemned to death. It is a tender, childish face, the eyes full of a haunting, heart-breaking sadness, the mouth relaxed, with a hopeless, helpless expression. It is not a tragic face, in the usual sense; it told to me, at least, no dark story of outrage, of vengeance, of profound despair. I saw only beauty, sweetness, a vague terror, and a sorrowful appealing. Others have seen far more in the face, and others again have seen full as much, thinly masked by sleep, in the exquisite face sculptured by our young countrywoman. I sometimes think that we give to every work of art a portion of ourselves, project upon it our fancies, or prejudices, and behold it through a medium, more or less distorting or glorifying. No two pair of eyes see the same thing in a picture, or statue, in precisely the same way. Even the grand old Greek forms, which have miraculously come down to us, through wars, devastations, and barbarisms (stone evangels of the divine in art), have become so incrusted with the interpretations of ages of critics that the sculptors who wrought them might fail to recognize them now. Few and transcendant are the works of art which speak an independent, universal language.

Mrs. Farnham says of the Greek Slave: "*Without* the manacles, you would know her for a high-souled and wronged woman, for whom there was no fate but submission." I doubt it. I believe that if many of the finest antique statues were deprived of their symbols, they would soon become the nameless foundlings of the world.

But to return. The face of Guido's *Beatrice* is certainly not "wasted;" there are no "furrows in the youthful cheek," no traces that I could see of "horrible loathing," or "torturing shame." The picture did not satisfy me in those respects; but it is, I believe, generally accepted as a veritable portrait. Miss Hosmer has so accepted it, and the bust of her statue is the marble correspondence of the picture.

Without taking these things into consideration, I do not think that any critic should decide upon the merits of this work. It was Miss Hosmer's *modesty*, not, as your correspondent intimates, her *presumption*, which inclined her to follow acknowledged authority. The ideal which Mrs. Farnham presents is certainly drawn with great tragic power and poetical truth; but it is, I fear, rather the ideal of noble, fully-developed womanhood, in the nineteenth century, than the "counterfeit presentment" of Beatrice Cenci. She, it must be recollected, was, at the time of her crime and execution, very young—not more than fifteen or sixteen; a strong, passionate, undisciplined nature, with the limited moral and mental culture allowed to Roman women of her time. It is hardly to be supposed that she suffered all the refined tortures, the unutterable horror, loathing, shame, frenzied grief, and despair, which a Shelley could imagine, and under the very thought of which the soul of a pure woman of our day staggers and sinks. The wronged girl, doubtless, acted against her unnatural tyrant from the burning impulses of hatred, terror, and fierce disgust; in vindicating her outraged womanhood, "she was greater than she knew." The dread consequences followed so soon on her act of vengeance that she had scarcely time to waste away with vigils of despair, or grow haggard with horror. She was in the full bloom of her luxuriant Southern beauty, when the storm burst upon her, and she was yet unwithered when the ax struck her down.

To me, she seems to have been no Judith, no Medea, but only a proud and passionate Italian girl, with a strong, instinctive love of purity and freedom, and hate of vice and tyranny, transformed, for a little time, into a Fury, an avenging Nemesis; then sinking back into the weakness of unheroic girlhood, with all its natural fear of death and the unknown, all its wild, tenacious clinging to life—feeling, even in her beautiful *body*, composed of the finest, richest, strongest elements of physical being, unsatisfied earth-yearnings, mysterious kinship with the warmth, the light, the bloom, the gladness of nature, from which she was to be torn remorselessly, and before her time.

There is something of this in Shelley's tragedy of "*The Cenci*," especially revealed in the incomparable pathos of the last act, but the effect of the character as a whole, is grandly heroic. In that magnificent structure of his genius, she stands a sublime Caryatidé, upbearing an awful weight of wrong, grief, and self-justifying crime.

If I were to paint, or sculpture Beatrice Cenci, it would be as drooping, passion-spent, in the shadow of her dungeon, shrinking from her own revolting and ghastly memories, the tremendous tragedy of her brief life, with terror, if not remorse; appalled by the gory front of her fate; forsaken of earth, and scarce daring to lift her parricidal hands towards Heaven, or to call upon the saints, who long ago seemed to have forgotten her. Or, I would paint her standing on the scaffold—passive and still, in the dead calm of despair; or inspired only with an impatient longing to satisfy human justice with her blood—the hated blood of the Cenci; to free her being from its vile taint, and stand, a white soul, before God.

But this subject has led me further than I intended at first. The story of Beatrice Cenci, always one of terrible interest, has lately been brought before us, not alone by Miss Hosmer's statue, but through two able translations of the powerful novel of Guerrazzi. So, a quarter of a century ago, Shelley revived the fearful story. Thus the "dead past" refuses to "bury its dead."

A few years since, when I was visiting Niagara, a man was drowned, below the falls, and the body was swept down the rapids, and into the whirlpool, where, after making all the narrowing rounds, on the slow, stealthy sweep of the current, it disappeared in the vortex. But, presently, it was thrown up in one of the outer circles, made again its fearful rounds, and was again drawn under. And so it continued for some days, disappearing in one place, and re-appearing in another, sometimes shooting up waist-high from the water, its horrible face turned shoreward, its dead arms tossing aloft.

So it is with the victims of great human tragedies. The swift current of time may seem to whelm them, and sweep them away forever; but, every now and then, the circles of the ages thrust up to view some ghostly form, some white, appalling face, and the world weeps and shudders anew.

We have been having an exhibition of English pictures in our Academy of Fine Arts. Among them are some admirable water-colors. Two or three of the landscapes are among the finest specimens of that delicate style of painting I have ever seen. One called "*The Convict's Return*," absolutely haunts me. It is a single figure, a rough, dark-faced man, walking heavily along what is scarcely a path, on a brown, heathery rise, and looking yearningly, though despairingly, over a landscape apparently familiar to him. It is a picture as impressive as it is simple, and full of sad suggestions. You feel that the poor pariah of justice is looking out for the home in which his innocent childhood was passed; for the lane, where he walked with the lost love of his youth; for the churchyard where his broken-hearted mother is laid.

Among the oil-paintings are several after the Pre-Raphaelite school, most of them sad specimens. There is one by Holman Hunt, which Mr. Ruskin has praised very much, but which I cannot wholly like, for all that. It is a curious, symbolic picture of Christ, called "The Light of the World." The face of the Saviour is very beautiful, and something more—it is divinely sad, tender, and gracious.

There is a picture by Lucy, of the parting of Lord and Lady Russell, which has, at least, one grand point: the restrained anguish of the faces. I was glad to find that the painter had not made Lady Russell beautiful, in the ordinary, fleshly sense. She is pale and spiritual; her face, exquisitely delicate in form, is wasted by grief and those long vigils of love and faith in which she "Prayed her Russell up to God."

Yet, after all, it seems to me to lack much of the sublimity of soul, the strength of intellect and character which belonged to that incomparable woman. In his fear of making the head masculine, the painter has failed to make it great.

The lady's dress offended, if not my eye, my *feeling*. It is of light, purple satin, richly trimmed with lace; not obtrusive, like the gorgeous draperies of the Pre-Raphaelites, but drawing the gaze too much from the face of the heroine, and taking, to use a good old English expression, from the *decency* of her sorrow. I have heard the same objection made against the magnificent curling hair of Lord Russell; but I do not think it holds. There is a sacredness, a humanity about hair (as long as it is not a wig) which not the most dandiacal style of dressing, or elaborate painting could destroy.

Noble as this picture is, I would not, if I could, have it in my home. I would not have children grow up under the shadow of such a sorrow. Give me rather one or two of the landscapes of this gallery—simple, quiet pictures, which let you down into the green lap of English country-life, the most delicious summer-life in the world.

I have been greatly struck by some large engravings of the three last pictures painted by John Martin, who has enjoyed a large reputation in England, during the last twenty or thirty years, for his powerful treatment of scriptural and theological subjects. He died three years ago. These pictures are called, *The Plains of Heaven*, *The Last Judgment*, and *The Day of His Wrath*. This last seems to me to be the greatest of them, by far, and it is surpassingly grand in its Miltonic scope and circumstantiality of imagination. The whole picture is possessed, instinct with an awful, omnipotent wrath; the heavens actually fester with lightnings—terrible, fierce, vindictive; the sun and stars have toppled from their spheres, and are plunging into the abysmal blackness below; while the "eternal hills," the impregnable fastnesses of the earth, are crumbling and swirling into an infernal chaos; human creatures and beasts are drifted and driven like leaves, or hurled headlong into black, dreadful, hell-like fissures, before the invisible, annihilating forces that traverse the elements. It is really "hell let loose;" it is the suicide of the universe.

What a barbaric theology is that which can furnish such a subject to art! There is a terrible fascination in this picture; it has the inevitable attraction of a maelstrom; yet I should not want to own it, for I almost question if the sun would shine into the room that held it.

In my last letter, when speaking of lectures and lecturers, my limited space prevented any mention of a very interesting lecture which I had listened to a short time before, from Mrs. Farnham, of your State. It was on "*The Spirituality of Woman*," as exemplified in the noble endurance, faith, and courage of certain heroines of the early California emigration—"unnamed demi-*goddesses*" they might be called. The subject was treated with great feeling and power, and the results were some terribly vivid picturing, and an almost awful conviction of the truth of the speaker's theory of superhuman inspiration, sustainment, and aid.

The spy who has brought back the most tempting bunch of grapes from your Canaan, seems to me to be the Rev. Mr. Bushnell, of Hartford, Conn. His descriptions of your "delectable mountains," and "happy valleys" made one long to begin life anew, and start from the lap of a country so grand, so majestic, and so bounteous—the young mother of a new republic, perhaps, destined to surpass the old, not only in wealth, but in true greatness and honor, justice and freedom.

With this mail, you will have news of the two grand decapitations of which all the world is talking—that of the Emperor's great enemy Orsini, at Paris, and that of the President's pet measure, the Kansas bill, at Washington.

Adieu, GRACE GREENWOOD.

Letter from Mrs. E. W. Farnham.

EDITORS FARMER: I am as patient, perhaps, as most people, and have, I trust, a sympathetic feeling for printers and proof-readers under difficulties; but there is enough of unregenerate human nature in me, notwithstanding the presence of these cardinal graces, to be stirred into consciousness by misprints. It would seem to be the function of that trying error generally, to invade your finest passage with some absurdity which is calculated to make sensible people wonder or smile at you, and pass over it with some such mental comment as, "a very passable writer, but not even—does not sustain herself—is only obscure when she would be profound, and absurd when she fancies herself poetical." It is a curious secret which perhaps some benevolent member of the craft might solve for us poor scribblers, that you never find a misprint in a dull or commonplace passage. Therefore I seldom have a complaint to make; but if I do get a pinion loosed ever so little, I like it to flutter just as it pleases, and I am willing to take the responsibility of my own follies in such rare moments, but not those of the astonished compositor. What did he mean by making me say "mysteries of *mind* and storm," in that passage about Palmer's Indian Girl? I felicitated myself on that passage. I fully believed in it, and I have no doubt I wrote it very legibly, and that the *w* which I used was as plainly distinguishable from the *m* which he used, as the pyramid of Cheops from a California potato. Yet with a perversity (I had almost said depravity) known only to his craft, he deliberately makes *mind* of *wind*, and so settles me there. Now I know that in actual life one of the most common phenomena we see is, mistaking, by a reverse process, wind for mind; it is done every day in the church and the court, in the forum and the caucus; but I do not count it authority for such a proceeding as this. What, I should like to know, is to become of any little barnacle like me, growing to the great keel of author-craft, if you are to make this substitute for us whenever you please. Take away from us our wind and give us only mind instead, and the whole sea of literature would be covered with a float of flounders at once. It would be a cruel and merciless prostration, and I hope, Mr. Farmer, that with your usual urbanity and consideration you will think better of it, and never deal a friend so unlucky a turn.

I had something to say about Railroads, having been West again since my last, and had occasion to see and think a good deal about these hard lines of our civilization; but I must wait till another day, only telling you now, by way of preparation for the tediousness of soberer thoughts, a little incident which I enjoyed in one of my hurried journeys some time ago.

We were coming through Canada, on the Great Western Railway. Capital road is the Great Western; broad-gauge cars, made for comfort; gentlemenly managers and conductors; time good, and everything most satisfactory to the traveler throughout. But it has one want which in times of emergency is particularly manifest: it wants emergency men! Leaving Detroit on the day I speak of, there was a larger compliment of passengers than had been expected, and so fifteen or twenty of us were put into a car where there was no fire. A suspicious looking stove, having much more the airs of an anthracite or sea-coal monster than of a useful denizen of a forest country like Canada, stood near the forward door. We naturally drew around the unfriendly looking thing, but as naturally retreated, one after the other, on finding that it was only so much cold iron. Taking my seat on the sunny side of the car, and watching the busy progress of departure from the window, I suddenly found the next seat in front occupied by a rawboned Yankee, who, in the native awkwardness of his huge proportions, looked as if he might be, at the very least, seven feet from sole to crown, though I dare say he might really have stood about six feet six. His mouth was proportioned to his stature, and his broad hands and knotty wrists protruded from sleeves which seemed tired of the expansive effort necessary to cover such prodigal growth. The conductor came in, and as I gave him my ticket I asked if a fire would soon be made in our stove. He replied very politely, that he was sorry to say it was a coal stove, and we could not have a fire in that car; but there would be passengers leaving the forward cars at every station, and he would take care to let us know as soon as there were seats vacant there. My Yankee neighbor grinned expressively and muttered as the square-cut, clear-eyed English official passed along: "wonder what'n thunder they got a coal stove for, to run here in the woods." An hour or more passed. People stopped at the stations, but others took their places, and there had no report of vacant seats come yet. The sun was leaving us too, and we were getting decidedly uncomfortable when the conductor reappeared, and I again ventured to suggest our condition to him. Vermont gave him no chance to reply, but swinging his long arm over the back of his seat, followed my petition with the inquiry: "mebbe you'd like to have a fire made in that stove; would you now?" "No," was the answer, prompt, but courteous, and again we were left in the cold.

"By golly," said Vermont, "I'm a mind to dew it, ef he did say no." The speed was slacking as we spoke, and we were very soon standing still at a wooding station. My huge neighbor stood up a moment and shook himself out, then he dropped into his seat again; then he rose, looked about, and suddenly deciding, made a rush for a pile of short wood in the rear of the train, seized what he could bind in his long arms at a single grasp, tumbled it in at the rear door, darted back and caught up a saw which an astonished laborer had just let fall, and as the whistle shrieked, stepped into the car with, "don't take on so neighbor, I'll send it back all right by this fellow," and as he spoke we were off.

The passengers looked on, as much amused as comforted by the prospect of a fire, which, with the help of the saw, his jackknife, and some matches, he soon had burning bravely. There was laughing and thanking all round, but Vermont retired quietly to his seat after having achieved the victory, and we were all sitting demure and comfortable, rushing along through the interminable forest, when that peculiar sharpening of the monotonous roll of iron upon iron, which warns you that somebody is coming or going, roused us, and there stood the astonished conductor, regarding the stove with a look of absolute incredulity. Presently his eyes fell upon the saw and the sticks, and then, full of indignation, they turned to my neighbor, who sat as imperturbable as the mountain, whose brawn as well as greenness he faithfully represented.

"Didn't know as that ere stove'd burn wood, did ye?" said he. "Does, *jess as easy*." What single act could more perfectly contrast the spirit of the two nations?

You have heard of our great Revival. Has it reached your shores, or is it yet due there. There are many discussions of its causes and spirit; some friendly and some impatient; some zealous and others cool. Among them I have seen none more spicy than those of the Herald. With a pungent *diabolism*, peculiar to that sheet, there was shown, the other day, a computation of those attending the religious excitement, and those who nightly resort to the theaters and other legitimate places of amusement; by which it would appear that the whole number of the former does not equal half the latter. Very naturally, the innocent writer of the Herald proceeds to inquire if this little brush with the satanic powers justifies all this noise, what deep root must the kingdom of the evil one have taken in the hearts of our christian citizens. How firmly must wickedness have been grounded among us, when the uprooting of a few little fibres on the outskirts of the field causes such commotion and rejoicing. And he caustically adds, that he fears there has been a good deal of idle boast in the high sounding phrases and pretensions of "christian people, christian privileges, christian hopes, christian civilization, and christian duties." With regard to this last, I suppose every one is at liberty to judge for him or herself. The Herald says, that with all the outcry, there are meetings being held only in twenty-three of the three hundred churches in the city. This is the best showing probably of the satanic view of the present times.

The ministers tell us that we are living in solemn and fearful days, and I heard nearly the same words the other day reported from the lips of a poor woman, who, with her two little children, was found perishing of hunger in a dirty cellar, that swallowed about six inches of defiled sunshine from a cut-throat alley, near the Five Points. Solemn and fearful days no doubt they were to her, and are to many who stay behind her, whom neither industry, idleness, nor criminality will furnish with bread. But days of promise too let us hope. Wise is the bee who extracts the honey only from the flower, leaving the bitterness and the poison to exhale in the storm and sunshine, and return to their innocuous elemental forms again. So I would do with human life, and with the "times" which it exhibits to us, whether they seem evil or good, solemn or gay, dark or bright. I suppose time is the only inalienable heritage of every soul. It is like a casket given to us at the beginning of a journey, which we must needs fill during its progress. It may be with gems, it may be with rubbish, but whatever we put into it will be our possession and our only possession at the end. When the goal is reached, how many of us will be doomed to painful disappointment, on finding that what we have so carefully gathered, and treasured, and toiled to keep, is without value! Alas, for the weary and heavy-laden who come up with these burdens instead of the imperishable treasure of good works; of growth helped on; of truth succored in its time of need; of suffering mitigated; courage renewed at the point of fainting; of despair turned into hope. Not the position you have achieved before the world; not the honors won; not the fortunes accumulated, will make your strength or wealth there; but the bravery which has held up, looking to God through the storm and the tempest; the tenderness which has bound up wounded hearts and braced feeble ones; the stern integrity which, tempted, has ever triumphed, or if not always victor, has strengthened itself in the pains of occasional defeat; the truthfulness which has recognized God as the Sovereign and His Divine impulsions in the soul as the law of life; these, it would seem, must be the only available funds at that great Exchange. And if the revival shall give men and women eyes to see truly what has intrinsic power and value to brighten and enrich the spirit, we will agree to call the days in which it comes to us, not solemn and fearful at all, but joyful and unspeakably blessed. The development of the religious life ought to be the occasion of all manner of reasonable gaiety and rejoicing, and I involuntarily distrust all kinds of excitement which promote gloom, groans, and longfacedness, as a condition of the incoming piety.

We are glad, most glad, to know that there is likely to be a means of communication with California this summer which will be available to *the people*. The Pacific Railroad question, as well as many others of deep interest, being thrown into a state of asphyxia by the pressure of Kansas, all zealous Californians turn their eyes seaward again to the land of their love. Alluding to Kansas reminds me that I begin to believe, or hope that I owe Mr. Douglas an apology. If I reflected, in my former letter, too faithfully, the then opinion of men hereabouts, that his new alliance was not prompted by devotion to the principles he seemed to be espousing; and if it shall prove that he was misjudged, no one will more gladly acknowledge the mistake than I. I am disposed to worship the man or woman in whom there is the courage to face square about and say, I have been wrong, and will not take another step forward there. I know your courtesy, Mr. Farmer, and how unwittingly I taxed it in that letter. But I will promise to do so no more, unless we have a grand jubilee before next letter-day, over the rejection of Lecompton; and in that case, I would not like to be bound to silence. Till then, *adios*. Yours truly, E. W. F.

NEW YORK, April 3, 1858.

EDUCATIONAL.

The Collegiate Institute at Benicia, Cal.

THE School Year at this Institution, is divided into two terms of five months each. The Sessions will open on the 4th of January and the 5th of July; closing on the 4th of June and December.

To the Patrons of the Institute we would say, that the facilities for obtaining a good education have been much increased this year. The range of studies will be ample, embracing the Ancient and Modern Languages, and a thorough course in the Physical Sciences. Neither are the accomplishments overlooked: in Piano and Vocal Music, we have the best Teachers in the State. Thoroughness in the Elementary Branches, before advancing into the higher studies, will be a primary requirement. We shall continue to follow, in our government, school arrangements and method of instruction, the Normal School or Prussian system, which has been adopted in the Eastern States with so much success.

Pupils will be fitted for the University, or will be trained with a view to the completion of their education in this School, as may be requested by the parents. Where no special directions are given, the course of the Institution will regard the Modern Languages, Natural Sciences and Practical Avocations of life, as the sine qua non of a good education, and the Ancient Languages as accomplishments.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location of the School is easy of access from all parts of the State; the buildings are excellent; and the quietness and healthfulness of the village are unsurpassed by any place on the Pacific.

TERMS, PAYABLE QUARTERLY IN ADVANCE:

	PER MONTH.
Tuition in the Higher English Studies (including Natural Philosophy, Chemistry, Algebra, Geometry, &c,	$ 8 00
Theory of Surveying (including Linear and Linear Perspective Draughting)	5 00
Latin and Greek	5 00
French and Spanish	5 00
Music, with use of Piano	10 00
Drawing	2 50
Booking-Keeping	5 00
Common English Studies	6 00
Vocal Music, without charge	
Board (per week)	6 00
Washing (per session)	20 00
Entire expense of Board, Washing and tuition in the Common English Branches, per year	$350 00

No Lights, Bedding or other Furniture required to be furnished by the pupil. No extra charges of any kind are made above those specified.

STOCKTON FEMALE SEMINARY.

THE First Session of this Institution will commence on Monday, March 1, 1858, and continue five months, under the charge of Dr. C. Collins and Lady, assisted by competent instructors.

FEMALE INSTITUTE.

THE Female Institute in Santa Clara, under the management of James Rogers, A. M., still enjoys a good degree of prosperity. The Board of Instruction is ample, and the Terms of Tuition as liberal as in any school of equal grade in the State.

To Teamsters and Others.

PATENT
ANTI-FRICTION
AXLE-GREASE.

THE season of internal communication with the Mining Districts having again opened, the subscribers take the opportunity of thanking their numerous customers for the extensive patronage given to their

PATENT AXLE-GREASE

during the last five years, and beg to say that no pains will be spared, in its future manufacture, to sustain its widely spread reputation as

The Best Lubricating Medium

for Coaches, Drays, &c., ever introduced into California.

HUCKS & LAMBERT,
Inventors and Sole Manufacturers,
NATOMA STREET, San Francisco.

NOTE. One application of Hucks & Lambert's Grease will enable the heaviest teams to perform the longest journey without requiring the axles to be re-greased on the road; and further, as the Patent Grease works free from coomb or gum the draft of the horse is very considerably lightened—a great desideratum in a long journey, or over a heavy road.

☞To be had wholesale of S. PILLSBURY, Manufacturers' Agent, 37 and 39 Battery st., San Francisco.

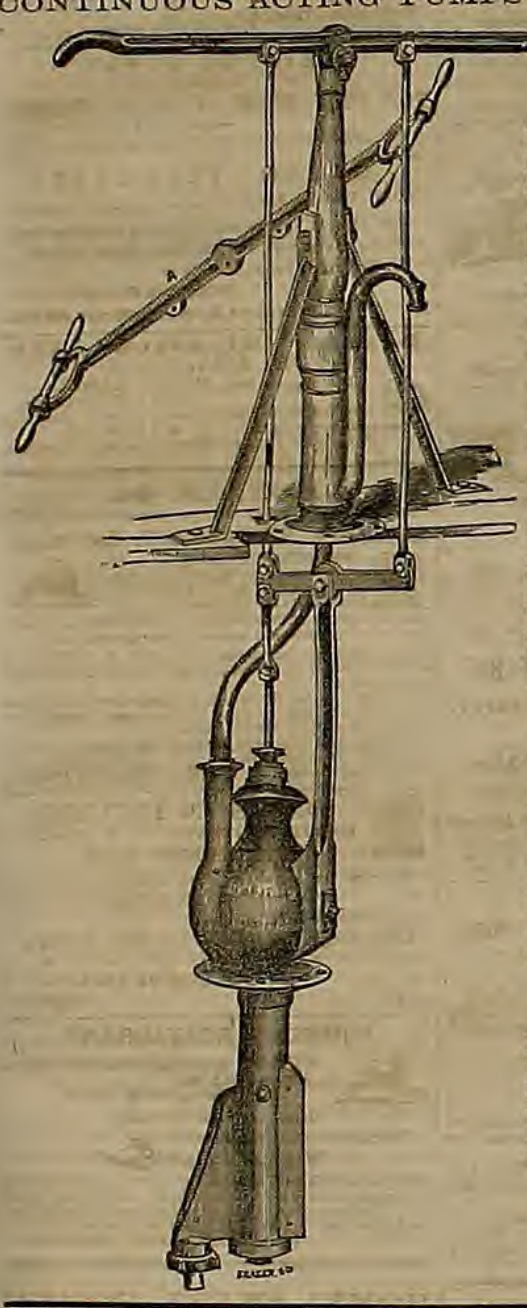
CONTINUOUS ACTING PUMPS FOR DEEP WELLS.



The annexed cut represents an arrangement of Pumps for drawing and forcing water from deep Wells, which may be used with either a single or double lever. The standard or upper part is placed upon the platform at the top of the Well; the cylinder, with the air-chamber attached, is bolted to a plank, and placed in the Well, within fifteen or twenty feet of the water (the nearer, the easier will the Pump work).

The air-chamber is connected with the standard by lead pipe, as represented, and the water is discharged at the surface by the spout. By attaching a hose, by means of a coupling, to the spout, the water may be thrown in every direction, seventy-five or eighty feet; serving to irrigate gardens, etc., as well as to protect buildings from Fire. Discharge, at each stroke up or down, forty-two cubic inches.

By lengthening the lead pipe and connecting-rods, these Pumps may be used in Wells of any depth.

Read the following, from among many certificates given voluntarily by those who have had them in use:

NAPA, October 14, 1857.

J. S. PAXSON—*Dear Sir:* The Deep Well Force Pump, Number 10, which you sent me a month ago, works admirably, doing all that you said it would. It raises water from a well fifty-three feet deep, discharging in a steady stream. It is the easiest working pump I ever saw. My little son, seven years old, can pump one hundred gallons at a time, without feeling tired or stopping to rest.

Good as this pump is I would much rather have had the Double Pump, Number 16, but my well, being too deep, would not allow me to use it. I shall take much pleasure in recommending your pumps, which I can do with much confidence.

Very truly yours,

(Signed) BOON FLY.

FORT VANCOUVER, Jan. 20, 1858.

JOS. S. PAXSON, 48 Cal. street, San Francisco:

Dear Sir: The Patent Double Acting Lift and Force Pumps, furnished this post, through Messrs. Allen & Lewis, your Agents in Portland, give entire satisfaction, and they are, in my estimation, superior to any Pumps I ever used.

The Deep Well Pump, Number 10, raises water from a well one hundred and ten feet, and works so easily that two men readily pump a barrel full in a minute and a half, and, by attaching the hose, they throw the water, in all directions, fifty or sixty feet.

It gives me much pleasure to add my testimony in favor of your improved Pumps.

Yours, &c.,

(Signed) RUFUS INGALLS,
Capt. U. S. Army.

J. L. POLHEMUS

DRUGGIST

J. [illegible] St.

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach
Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Important Mining Decision—Placer vs. Quartz Claims

Judge Barbour, of the 10th Judicial District, recently made an important mining decision at Marysville, in which the rival rights of placer and quartz claims were investigated. The Marysville News says, the only similar decision made in this State was given by the District Court in Nevada county, a few months since, and was the same in effect as the decision of Judge Barbour. The News thus states the Marysville decision:

"The case, which was tried before the District Court in Yuba county, without a jury, was that of B. F. Reed et al., vs. Bruce Fry et al. The plaintiffs claimed a quartz ledge in the ground of defendents, under some rules made by an association of about ten persons, after the ground was taken up for placer mining by the defendants; the plaintiffs claiming quartz mining to be a separate and distinct branch, and that a miner could not hold a placer claim and a quartz ledge at the same time, even though it be in his own ground, unless he claims it specially as a quartz claim, separately from his mining claim. The plaintiffs did not claim the mining ground in their complaint, nor establish any prior right to the ledge. The defendants proved their right to the ground, and that they knew of the existence of the ledge and claimed it with their mining ground. They also proved that the law under which the ground was taken up allowed a miner to hold from bank to bank, in a ravine, and that no side claims were allowed to be taken up on a ravine in that district. His Honor decided that, when a claim was taken up for mining purposes, the occupant was entitled to all the mineral found in that claim, whether in the earth or quartz; and also, that the owner of a quartz ledge could not follow it through the ground of another party, unless the ledge was located and its boundaries defined, before the ground was claimed and legally located."

There is no doubt, says the journal named, commenting on this decision, but that it will be received with satisfaction by a large majority of the miners in California. There is no doctrine but that of prior right and possession that can work well in the mines, or ever be sanctioned by a majority of the miners. It is the law, already well established by our Supreme Court, in relation to water privileges and mining claims. If a miner takes possession of a water right, he can undoubtedly use that water to wash either quartz or earth, and it would be a strange doctrine to say that a miner cannot appropriate all the gold in his claim to his own use, as it is not the quartz nor the earth he is after, but the gold only, and gold is generally considered to be the same material, no matter what it is found in. This is the doctrine of common sense, as well as common law. The claims in dispute are situated on Deadwood Ravine, near Ohio Flat, about two miles from Forbestown, and are supposed to be very valuable, as the owners have already taken $7,000 from quartz boulders found in this ground. Quartz mining is certainly a most important branch, and ought to be fostered and encouraged by all fair and legal means, but no particular interests should be permitted to interfere with the vested rights of others. The placer miner could, with some propriety, claim mining ground surrounding a quartz ledge already located, and go into any pocket in the ledge containing a deposit of gold in the earth, and claim it as his own—as the quartz miner can only claim the gold in quartz. This case will probably be taken to the Supreme Court, and the result will be looked for with much interest.

Gold by the Pound in Columbia.—About fifty thousand dollars worth of gold dust was purchased in town, last week, being a portion of the yield from the mines in and around this city, for the six days ending Saturday, April 24th. Messrs. W. O. Sleeper & Co., purchased upwards of 300 ounces, on Monday, and it is expected that the yield this week will exceed that of last, as, in addition to the fact that new claims are constantly being opened, several large nuggets have been taken out within the past few days. We give below a few items of successful mining operations, last week:

The Eakin claim, in Table Mountain, yielded ninety-eight ounces, last week; Wheeler & Co., Table Mountain, fifty-five ounces; Scraperville flume, twenty-three ounces, and Pratt & Co., twenty-nine ounces.

The quartz lode of Mr. John Royal, of this town, near Summit Pass, yielded ninety-two ounces of gold last week. The workmen are now engaged in getting out some excellent rock, which is expected to pay better than any they have heretofore crushed. Harding & Franks, Shaw's Flat, are averaging *a pound a day*.—[Columbia Gour., May 1st.

Harvest Prospects.—The Sacramento Valley Yeoman of May 1st, says: From all appearances the harvesting will commence in this vicinity, Tehama, about the 20th of May. Preparations are making by many of our farmers to cut their hay by the 10th or 15th. On some of the more forward lands, the barley is all headed out; and, should the weather continue warm and dry, much of it will ripen and be ready for the reaper before the above time.

There is a beet growing in the garden of Wm. Burgess, Tehama, the top of which (we mean the leaves) stands over six feet across, and casts a shadow that would shade the sun from a small drove of stock. A crowbar was used a day and a half in vain to try its length and pry it out; but it was thought that nothing short of a stump machine could extract it in all its beauty of form and proportions. It will be allowed to stand until the Agricultural Fair at Marysville, when it will be hauled there for show.

Judge Tyner and Wm. Humer, two of our veteran teamsters, having taken the trouble to go over the Shasta and Weaver road to see for themselves, have returned, and pronounce it O. K. They will load, states the Beacon, for Weaverville, in a few days. The miners on Weaver, who have been there since 1850, without seeing out, will think it an earthquake when they hear a six or eight-mule wagon jolting along up the creek, loaded with eighty or ninety hundred of freight.

Native Silver.—The editior of the Grass Valley Telegraph was shown, by Mr. Delano, a few days since, a beautiful arboriferous specimen of native silver, weighing about two ounces, almost pure, and perfectly malleable. It was taken from a quartz ledge some two miles from Osborne Hill. All the gold from that vicinity contains more or less silver.

H. M. Stone, of Tehama, expects to strike an artesian stream at the depth of thirty feet, according to the Yeoman.

OIL!

FOR QUARTZ MILLS.

STANFORD BROTHERS,

PACIFIC OIL

AND

CAMPHENE WORKS,

INVITE attention to the following Certificates from GRASS VALLEY:

New-England Quartz Lead, Dec. 23, 1857.

W. Loutzenhiser, Agent of Stanford Brothers, Pacific Oil and Camphene Works:

Dear Sir: I have now given those Oils from Stanford Brothers, which I purchased from you, a fair trial, and find them the VERY BEST I have ever used.

Z. WHEELER, Superintendent.

Alison Ranch, Dec. 25, 1857.

This is to certify, that we have been using the Oils from Stanford Brothers Pacific Oil and Camphene works, for a long time, and find them of a superior quality.

JOHN ANDERSON, First Engineer.

Alta Hill, Jan. 12, 1858.

I hereby certify, that we are now using on our Machinery, Oils manufactured by Stanford Brothers' Pacific Oil and Camphene works, purchased at their Agency in Grass Valley, and have no hesitation in saying I believe them to be superior to any other manufactured in the State.

L. CARLSSEN, Sup't Alta Mining Co. No. 2.

The SPERM OIL furnished to these Mills is worthy the particular attention of ALL who use OIL for lubricating purposes.

Proprietors of Sawmills, Gristmills, Steamboats, and other Machinery, throughout the State, supplied in quantities to suit, and quality guaranteed in all cases.

WHEELER & WILSON

MANUFACTURING COMPANY'S

SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as Woman's Friend.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

H C. HAYDEN, Agent,

Hedges and Hedge Plants.

THE following excellent editorial upon the subject of Hedge Plants, we take from Hovey's Magazine, one of the oldest and best Horticultural magazines published at the present day. The various plants there named we know very well to be well adapted to our climate, every one of them, and especially the Osage Orange; this will be found the finest and best of all. We commend this article to our readers:

The hedge dates from a very remote period. We read in the Bible of the "vineyard being hedged about." The garden of Alcinous, the Phæacian king, is said to have contained something less than four acres, "surrounded by a hedge;" and Homer relates that the old Laertes was "planting a hedge" when his son Ulysses returned from the Trojan war. It thus appears to have been a not unfrequent appendage to the gardens of antiquity. But to whatever extent it may have been planted at so early a date, it became a prominent object in Roman gardening. The villa Laurentina of Pliny was surrounded with hedges of Box or Rosemary, and the Tusculan garden was surrounded with evergreens sheared into various forms.

The Dutch, in their adoption of the Geometric style in its severest form, made extensive use of hedges, as everything was reduced to the most artificial style; in addition to hedges, they sheared many of their trees, particularly the Box and Yew, into various fanciful shapes. The French gardeners were also famous for their sheared evergreens; and in the earlier English gardens they were common ornaments. But it was not till the introduction of the Natural or English style that the hedge, in its present distinctive character, came into general use: since then they have increased to such an extent that they have entirely changed the features of that country. All who have visited Great Britain need not be told how much they add to the landscape effect of every extensive view. The verdure of these inclosures is delightful, and their perfume has been celebrated by the poets:

——"How rich the gale;
Far off I scent the Hawthorn's bloom."

One would suppose, from a casual inspection of our suburban villas and even town gardens, that the most conspicuous ornaments that could be introduced are wooden fences of some sort. It is not uncommon to see, in very circumscribed grounds, prominent whitewashed palings inclosing the front yard, the avenue, and the garden, separately, like so many pens upon a cattle-fair ground, as if the number augmented the beauty of the place! We can call to mind many such, and have wondered why they have become such favorite objects, erected as they can only be at considerable expense. At the lowest calculation, we should judge that, in many instances, money enough has been spent upon these useless and unsightly structures to stock the closely-fenced-up garden, with scarcely a tree in it, with some of the finest fruits and shrubs. A fence is a necessary evil at the best, to be avoided as much as possible, and never introduced only upon the boundary for the protection and safety of the grounds: all besides this mar and disfigure the premises just in proportion to their conspicuousness and repetition. All division lines, even where protection from animals is necessary, may be accomplished by appropriate hedges.

Whether hedges will ever be introduced to the same extent they have been in Great Britain, is a question. The abundance of lumber and its cheapness, in this country, renders this doubtful; while the greater cost of hedges, and the labor in managing them, adds to this doubt. In the great West, where timber is very scarce, this is a matter of some importance, though generally it is of no great consequence. But as ornaments to our country homes—and it is to these that our remarks are directed,—the hedge should be every where introduced, that the offensive paling, which does not harmonize with any landscape, may be confined at least to its legitimate purpose of protection or privacy around an estate, and all dividing lines, for whatever purpose needed, be formed of some ornamental hedge. The effect of such lines of verdure upon the appearance of grounds, even of limited extent, need only be observed to be fully and universally appreciated. The entire aspect of our richest farms would be changed and beautified, could well-trimmed hedges be substituted for the zigzag rail fences and rude stone walls which now diversify and disfigure their surface. Even on the score of economy, it is argued by many that hedges should take the place of fences. Once properly set out and judiciously managed, they are as perfect a barrier to animals as the rail fence, and last a lifetime with the slightest annual expense of clipping.

We should scarcely be believed if we were to state that, notwithstanding all that has been written about hedges and the ample directions for their management, few that deserve the name are to be seen. In all our experience we never yet saw a dozen good hedges, though we have noticed what were called such, hundreds of times. They are little more than vegetable screens, tall and thick at the top, and bare and leafless at the base: neither a tree nor a hedge; shutting out by their hight some pleasant garden, while below they admit both bipeds and quadrupeds with perfect ease. Such are the majority of hedges raised by improper treatment while young, and too large when the neglect is discovered to be easily renovated.

As objects of shelter, aside from protection, hedges deserve introduction into and around all gardens wherever exposed to violent winds; and for the growth of many of the finer fruits and plants, for shade in summer and warmth in winter, they serve an invaluable purpose. The Arbor Vitæ is especially adapted to this end, serving, by its dense, evergreen foliage, as a screen from the hot suns of summer to many plants which will not thrive without it. They are better than a close fence or wall for this object, as they admit of a circulation of air, and at the same time effectually accomplish all the objects of the former. In the less sunny and cool climate of England, they are indispensable in the extensive nursery grounds and better gardens, where large and choice collections of plants and flowers are cultivated.

Having thus shown many of the advantages of hedges—their importance in a landscape point of view—their great value as screens, and, to a certain extent, their economy—we proceed to give a brief account of the most approved and desirable hedge plants, with the soils best suited to each, and some hints in regard to the appropriate form in which they should be clipped.

When the hedge was first introduced into our country, it was thought that no other plant would answer the purpose but the same one adopted in Great Britain, namely the Hawthorn. It was therefore imported in quantities, and many old stages still exist, though in most instances in a very dilapidated condition. Time, however, showed that though so beautiful and admirably fitted for the climate of the mother country, it was not at home with us. Our hot sun browned and burnt its pretty foliage, and that insidious foe, the borer, attacked and destroyed its roots. The best managed examples began to show ugly gaps, and, ere long, it became apparent that neither the associations connected with this favorite tree, nor the beauty and delightful fragrance of its snowy flowers, could save it from destruction. Here and there, in various parts of the country, some old homestead of the last century is still inclosed with the Hawthorn hedge; but they are destined, we fear, to eventually give way to its congeners the American Thorns, or the Buckthorn, and other plants.

The American Thorns.—As a substitute for the English Hawthorn, two of our American Thorns answer a very good purpose. They are both vigorous and hardy, retaining their foliage, and growing rapidly. The Cockspur, or New Castle Thorn (Cratægus crus galli), is a most beautiful hedge plant, with an entire foliage, as green and glossy as the camellia. In Wilmington, Delaware, to which State it is indigenous, there are some of the finest specimens. We have also seen one in the grounds of D. F. Manice, Esq., Hempstead, L. I., which was a gem in its way; properly clipped, compact, and a perfectly protective barrier to all animals. The other is the Washington Thorn (C. cordata), which, though more resembling the English than the Cockspur, makes an effective hedge, being well furnished with prominent thorns, very hardy, and retains its foliage well. These both deserve far more attention than they have hitherto received. We can only attribute their neglect to the scarcity of the plants, and a consequent resort to other and less beautiful kinds. If our nurserymen would but keep up as good a stock of these as they do of the Buckthorn, with such a specimen to look at as Mr. Manice's, we are sure they would speedily inclose hundreds of our neat suburban grounds. Both of them prefer a deep, rich, loamy soil, not subject to wet at any season of the year, but more particularly in winter.

The Buckthorn (Rhamnus catharticus).—The ease with which this favorite hedge plant is raised, its perfect freedom from the attacks of all insects, and the certainty of its living, have contributed greatly to its popularity. As a protective hedge, it is also very effective; it is deficient in thorns, though the lateral branches are armed with short stiff spurs, which render it quite formidable when thick and clipped in a proper manner. As an ornamental hedge, it cannot compare with some other plants for the same object. It does not retain its foliage very late. It transplants with ease at almost any season of the year. The late Hon. John Lowell, who had some good specimens around his fine place at Roxbury, once informed us they were set out as late as the 20th of June, without the loss of a plant. Other good qualities are, that it bears clipping freely, resists any degree of cold, and will thrive in almost any soil not perfectly sodden.

The Privet (Ligustrum vulgare).—Among the deciduous ornamental hedges this holds the first rank. It is indeed almost evergreen; pushing its small, lively green foliage early in the spring, and retaining it up to the very verge of winter, and oftentimes beneath heavy snows until spring. Its growth is nearly upright, the branches diverging with great regularity, with a yellowish spray which adds to its attractiveness when denuded of its leaves. It grows with great facility, bears clipping as well as the Buckthorn, and, so far as our experience goes, is quite free from insects.

There are several varieties of the Privet, all very pretty, but that which appears the hardiest, and succeeds best, is the yellow-berried, so called, the berries of most of the others being black. As an ornamental hedge, next to evergreens, we repeat that this is the finest of all the hedge plants we have yet seen for our climate.

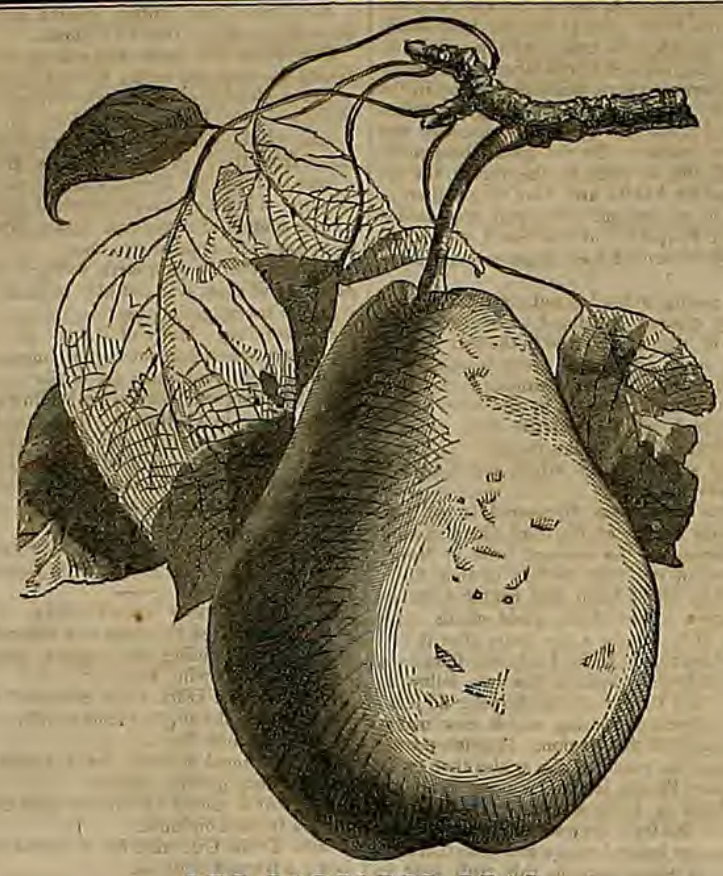
The Hornbeam (Carpinus betulus).—In England this is very extensively used for hedges and screens. The growth is very strong, and, as it retains its desiccated foliage till spring, it affords a most excellent protection from cold winter winds, while its dry hanging leaves give it a warmer and more cheerful appearance. It is perfectly hardy, transplants very easily, bears the shears with impunity, and may be kept low as readily as the Hawthorn. It thrives in almost any soil.

The Osage Orange (Macluria aurantiaca). If we were to judge from what has been said in favor of the Osage Orange this would rank at the head of all hedge plants. None will deny the superior beauty of its foliage, or the thorny character of its branches. As a tree it should be introduced into all plantations; but as a hedge plant, it should be planted with caution in all the Middle and Northern States where the thermometer sinks much below zero in winter. We have had some experience with it in the latitude of Boston, and are very well satisfied it will not answer here. The experiment was tried twenty years ago by J. P. Cushing, Esq., of Belmont Place, Watertown. He planted a hedge 500 feet long, and, after five or six years, rooted it out. It was managed in the best manner by his intelligent gardener, Mr. Haggerston, but every winter cut it up, till it became too unsightly to retain. As a tree, it appears quite hardy, a specimen in the grounds of Mr. Kenrick, of Newton, having attained a large size and borne fruit.

The Osage Orange is naturally a large tree, attaining the hight of thirty or forty feet: it is also a rapid grower. It is therefore impatient of the shears, and grows with such vigor and so late in the season, that the wood, after clipping, does not mature: consequently, when severe cold weather occurs, these shoots are killed back to the old wood, and, from the natural weakness of a plant too suddenly stripped of its wood, the root dies also. The winter of 1856-57 riddled many of the pet hedges of this tree in Illinois, and we observe that several planters from the northern part of that State pronounce it too tender for their climate. In the Southern States it may prove the best of all hedge plants, but, until further experience shall settle the question of its entire hardiness more completely, it will be unsafe to try it with us. Nothing would give us more pleasure than to be able to recommend so fine a plant—with a leaf as beautiful as the orange—and we shall be glad to announce the first successful experiment with it.

INTELLECT DEVELOPED BY LABOR.—Are labor and self-culture irreconcilable to each other? In the first place we have seen that man, in the midst of his labor, may, and ought to give himself to the most important improvements, that he may cultivate his sense of justice, his benevolence, and the desire of perfection. Toil is the school of these high principles: and we have a strong presumption that, in other respects, it does not necessarily blight the soul. Next we have seen that the most fruitful sources of truth and wisdom are not books, precious as they are, but experience and observation; and that these belong to all conditions. It is another important consideration, that almost all labor demands intellectual activity, and is best carried on by those who invigorate their minds; so that the two interests, toil and self-culture, are friends to each other. It is mind, after all, which does the work of the world; so that the more there is of mind, the more work will be accomplished. A man, in proportion as he is intelligent, makes a given force accomplish a greater task, makes skill take the place of muscles, and with less labor gives a better product. Make men intelligent, and they become inventive; they find shorter processes. Their knowledge of nature helps them to turn its laws to account, to understand the substances on which they work, and to seize on useful hints, which experience continually furnishes. It is among workmen that some of the most useful machines have been contrived. Spread education, and, as the history of the country shows, there will be no bounds to useful education.—[Extract.

BEAUTIFUL SIGHT.—The Sacramento Valley Yeoman thus speaks of the prospects of the harvest: What a delightful view is presented to the eye in going into the adjacent country by the fields of grain that stretch out for miles in almost every direction. The luxuriant growth of the various cereals looks like an immense sea as the wind causes it to move with the regularity that a gentle breeze moves the billows on the ocean.



THE BARTLETT PEAR.

Bartlett, or Williams' Bonchretien.

ABOVE, we present our readers with a drawing of this delicious Pear. It is our intention to give a series of illustrations of the most popular fruits, in coming numbers of the FARMER, the better to create a demand for only those which are worthy cultivation. Below, we give a description of the Bartlett Pear, from Downing's Fruits and Fruit Trees of America:

This noble pear is, justly, one of the most popular of all the summer varieties. Its size, beauty, and excellence, entitle it to this estimation, apart from the fact that it bears very early, regularly, and abundantly. It is an English variety, originated about 1770, in Berkshire, and was afterwards propagated by a London grower by the name of Williams. When first introduced to this country its name was lost, and having been cultivated and disseminated by Enoch Bartlett, Esq., of Dorchester, near Boston, it became so universally known as the *Bartlett* pear, that it is impossible to dispossess it now. The first imported tree in Mr. Bartlett's grounds, was sent from England in 1799. It suits our climate admirably, ripening better here than in England, and has the unusual property of maturing perfectly in the house, even if it is picked before it is full grown. It has no competitor as a summer market fruit. The tree grows upright, with thrifty, yellowish-brown shoots, and narrow, folded leaves.

Fruit of large size, irregularly pyramidal. Skin very thin and smooth, clear yellow (with a soft blush on the sunny side, in exposed specimens), rarely marked with faint russet. Stalk, one to one and a half inches long, stout, inserted in a shallow, flat cavity. Calyx open, set in a very shallow, obscurely plaited basin. Flesh white, and exceedingly fine-grained, and buttery; it is full of juice, sweet, with a highly perfumed, vinous flavor.

A Trip to the Mountains.

EDITORS FARMER: Having just returned to the city, after a pleasant trip to the interior, it may not be uninteresting to your readers to perose a brief outline of the results of my cursory observations of the region through which I have traveled.

Tired of the unceasing excitement of the "City of the Plains," I jumped aboard the cars, and soon found myself, for the first time, in the thriving town of Folsom, once known by the classic name of "Nigger Hill." This was once noted for the richness of its placer diggings, which are now abandoned by their former occupants, and are worked only by a few disconsolate-looking Chinamen, who, if they are not adding much to the wealth of the country, at least afford to the traveler a practical illustration of the character of mining in the flush times of '49 and '50, when the sluice, the hydraulic, and the quartz mill of the present day, existed only in the dreamy imaginations of inventors. There are several tunnel claims in this vicinity which are paying well; and it is the opinion of those conversant with this region, that ere long a systematic combination of capital, skill, and labor, will reveal vast stores of wealth, which have not yet been reached. But, independently of gold, Folsom has resources which must make her one of the most prosperous places in our young State. Granite of the finest quality, and easy of access, is found here in inexhaustible quantities; and the water-power afforded by a succession of falls in the river, is almost unlimited. These advantages, in connection with its nearness to market and the agricultural portions of the State, make it evident, that at no distant day Folsom will become the Lowell of California. The wire suspension-bridge across the river, a short distance above the town, does great credit to the skill, taste, and enterprise of its constructors, and is far out of reach of the agencies by which its predecessor was destroyed. The stone works erected here, under the superintendence of Col. Russ, are not now in operation, experience having demonstrated that the inequality in the hardness of the rock prevents its profitable working by machinery; but improvements will doubtless be made in the machinery, which will overcome this impediment. At seven o'clock, on a fine sunny morning, I started by stage for Jackson, where I arrived after a pleasant ride, over a good road, passing through an undulating, picturesque region of country, which, in former times, abounded in rich placer diggings.

Most of the placer mines along this route have been abandoned, but the numerous tunnels, quartz mills, flumes, canals, productive farms and pleasant homes, indicate most satisfactorily that although great changes have taken place in the modes of mining, and in the habits of the miners, the idea that "the mines are giving out," because placer mining has ceased to be as as profitable as formerly, is one of those absurdities which no sane person, acquainted with the facts in the case, can for a moment seriously entertain. When we consider that our quartz veins have been but fairly prospected, and our subterranean river beds but imperfectly understood, and tapped only in a few places; and that with all our rapid and wonderful improvements in mining machinery and gold-saving apparatus, we lose a large amount of gold, which future improvements will doubtless collect; when we consider that we have the most intelligent and energetic population that the world can boast, and a climate unsurpassed by that of any country on the globe, we can safely and confidently indulge the hope that the present depression in business, resulting from wild speculation and private and political dishonesty, will soon give place to the steady, onward, upward progress of a permanent prosperous and happy population.

Jackson is a large thriving town, pleasantly located in the centre of a rich and populous mining region. The large brick stores and the heavy stocks of goods in the business portion of the town give it a metropolitan aspect, while the neat vine-clad cottages, tastefully arranged gardens, and thriving orchards and vineyards in the suburbs, show that wealth, taste, and permanent inhabitants in California are not confined to the large cities and the agricultural regions of the State.

Among the many natural resources of Amador county, the Amador marble is not by any means least important. It exists in the greatest abundance; is easily obtained from the quarry, and in quality compares favorably with that imported. Indeed, in polish it equals, if it does not excel, all other kinds of marble. However, in marble, Amador, with all its advantages in this respect, must yield the palm to El Dorado county, in which there is an extensive quarry of marble, equal to the famous Italian. I have had the pleasure of closely examining a block of it, which is pronounced by practical stone-cutters, equal in all respects to any that they have ever seen. There is also, in Amador county, extensive quarries of a most excellent soap-stone, which is perfectly fire-proof, and when first taken from the quarry, can be sawed or cut as easily as wood; but when subjected to the action of heat it becomes exceedingly hard and durable. The proprietors of the gas works at Jackson, having found great difficulty on account of the frequent "burning out" of their retorts, finally resorted to an experiment with a retort made of this soap-stone, which has proved entirely satisfactory. At this establishment, an excellent gas is made from pine wood, by a very simple apparatus, consisting of a retort, a cooler, and a gasometer. The pitch-pine that forms a large part of the forests of the mountains of this State is admirably adapted to the manufacture of gas and charcoal, and will, I think, take precedence of stone-coal in this branch of business, in all our mountain towns.

Reluctantly taking my leave of the old friends I had met, and of the new ones with whom I had become acquainted during my brief stay, I left Jackson, promising to return at some future day to examine more thoroughly the many objects of interest in Amador, where nature has so bountifully lavished her beauties and her wealth. I was sorry that time did not admit of my visiting the sumit of the Butte near Jackson, which it is said commands one of the finest landscape views in the State. By the way, a few years ago, on the Fourth of July, a romantic couple were married on the summit of this mountain, thus setting a prominent example of patriotism, which a very large proportion of our people ought to imitate.

J. A. B.

Cherry Ripe.

FINE ripe cherries! What would our friends in the East say were you to show them a dish of fine, large, shining, Black Tartarean, and White Bigarreau Cherries, on the 8th day of May? Yet we could do it. Several parcels have been gathered from the gardens round the Levee City, the past week.

Practical Hints on Raising Onions.

The following article, says the American Agriculturist, is very acceptable and valuable, as it is from one who speaks from large experience:

I know of no crop which requires the cultivator to be more persevering and to attend to his duties more punctually than that of Onions. From the time the seed is in the ground until they are in the market, there is no period when they can be left without receiving his attention. If this be given, perhaps there is no crop which pays better for the labor than this. Many of your readers may not be aware of the quantities sent to our markets. As one item on this account, I will say that the towns of Southport and Westport, Fairfield Co., Conn., sold last year one hundred and fifty thousand bushels or more.

The soil best suited for the onion is a clay loam; if gravelly they will dry up before they mature, and if too wet they can not be sown early enough in the spring. The longer the ground has been under cultivation the better, as they will not bottom on a new soil or where it is very light or sandy. Many put the manure on the ground in autumn and plow it in, then harrow down in the spring without re-plowing. The manure should be stacked and turned over once or twice and well heated in order to have it fine and free from weeds. Long manure, besides being in the way during cultivation, is apt to make the ground too light.

Most people prefer fall plowing, as the soil is apt to be lumpy if plowed in the spring, and will not be fit for sowing as early as if previously plowed. If fall plowed, it should be well harrowed with an iron-tooth harrow in the spring, followed by the bush harrow until made as level as possible. I have found the best mode of making a bush harrow for this purpose, is to take a plank eight feet long, eight inches wide, and two thick, bore holes in it and put in fine brush. Then fasten the chain so it will draw from the top, and it will keep a ridge of dirt in front of it which will fill all holes and leave the ground nearly smooth. It should then be raked over by the hand-rake—I think a wooden one is the best—and all small stones removed.

A machine costing about three dollars, and drawn by hand, makes two drills at a time, one foot apart, and drops the seed at the rate of about four pounds to the acre. This is covered by shoving a hoe, or drawing a rake lengthwise the drills. The time for sowing is as soon as the ground is dry enough, which, with us, is from the first to the middle of April.

As soon as they are up enough to see the rows in the morning—they can be seen at that time much sooner than at any other—they should be gone through carefully with a hoe about eight inches wide and only one and a half deep. A hoe like this lets the dirt slide over it, leaves the ground level, and is light to handle. As soon as the weeds which are cut up by the hoe are dead, the weeder should crawl over each row using a hoe about two inches wide and three-fourths of an inch deep, with a handle about eight inches long, cutting up what he can draw with the hoe and pulling the remainder. For this part of the work trusty boys are better than men. About this time a coat of patience and perseverance is generally necessary to insure a good crop. From this time they should be kept perfectly clear from weeds, for if they once get overrun your crop is ruined. They generally require to be gone over four times. When the tops are nearly dead, which is generally in August, they are fit to pull. If they do well, the tops will fall down before they dry up. As the onions are pulled, the weeds should be all hoed up and raked into piles, to prevent them from going to seed. Leave the onions spread on the ground a few days. Some people pile them up, putting three or four bushels in each heap, and let them stand in this way for two or three weeks. This gives them time to sweat before housing them. They should never be put in when damp, as they will grow more and more so, turn black, and rot. The best place to keep them until cold weather, is under cover where they will have plenty of air and can be kept perfectly dry. They should never be more than three feet thick on the floor. If required to be kept through the winter, they should be put in a tight place and well covered to keep the air from them. Moderate freezing will not spoil them if allowed to remain covered and unmoved until they thaw. A common cellar is generally too warm and damp to keep them well. If the roots begin to start they should be moved and dried. From four to six hundred bushels per acre is a common crop. The best time to sell is when they bring a high price. An average price for the last ten years has been about fifty cents a bushel. DAVID H. SHERWOOD, Southport Conn.

Steam Squirrel Hunting.

Go away from home to learn what is going on about you. Thus the Scientific American says:

A correspondent, writing from Stockton, Cal., informs us that ground squirrels are so numerous in that region that they are a perfect pest to the farmers, as they destroy a very large portion of their crops. As much as $100,000 are expended annually, in California, in purchasing strychnine, arsenic, and phosphorous, to destroy them, but these poisons seem to produce no useful result in diminishing their numbers. Our correspondent, however, has, we think, hit upon a plan, which, when he carries it out, will put them to rout most effectually. He proposes to get a steam-boiler of about four-horse power, mount it on a wagon, draw it out to the fields, get up steam, and conduct it into their holes by a pipe, and thus steam the "varmints" in their dens. These squirrels live in what are called "towns;" their holes are very numerous, and in clusters, and the passages underneath are all connected. By taking the steam-pipe, therefore, and inserting it in a hole, then closing all the others in the vicinity, and letting on the steam, a whole community will thus be steamed at one operation. When this is accomplished, he will proceed to the next township, and extinguish its subterranean inhabitants in the same manner, and so on until the whole of squirreldom in that region is subdued by the all-conquering power of steam.

MACHINE FOR TURNING TOOL HANDLES.—Hiram Plumb, of Honesdale, Pa., has invented a new machine for the above purpose. It consists in the employment of a series of cutters combined with a pattern and stops, so that the desired articles can be readily turned and cut successively from a bolt or stick, in an expeditious and perfect manner. The invention also consists in a peculiarity of the finishing tool, whereby the articles, as they are finished, are cut from the bolt, and they present at their ends a smooth and finished appearance.

THE blasting necessary to obtain material for the construction of the harbor of refuge at Holyhead, North Wales, still continues; and, on one occasion, 200,000 tons of rock were blasted at once by 21,500 pounds of gunpowder.

Bearing Year of Apple Trees.

The bearing of Apple Orchards in alternate years is so general, in all the older States, that it has come to be considered a necessity. With some trees, the habit is so inveterate that not a solitary apple can be found upon the branches in the unfaithful year. The whole energies of the tree, and the resources of the soil seem to be exhausted in the fruitful years, so that it takes two years of hybernation and rest to recuperate. This habit is a great draw-back upon the profits of fruit growing. In the abundant years, apples are cheap, and the farmer gets but a fair return for his labor. In the scarce year, when prices are high, he has no fruit to sell.
